About the Authors v
Foreword (by Donald J. Firesmith) vii
Preface ix
Acknowledgments xiii

Part I: Introduction 1

1. Software Engineering 3

1.1 Background 4
An engineering viewpoint 4
The software development process 6

1.2 The Waterfall Life Cycle 7
The analysis phase 8
The design phase 10
The implementation phase 11
The acceptance testing phase 12
Maintenance 12
Configuration management 13
Large projects 14

1.3 Other Process Models 14
The Cleanroom process 14
The spiral model 16
High reuse and the domain engineering process 18

Further Reading 22

Table of Contents
More information

2. Object Orientation **23**

2.1 Background 23
High-level languages 24
Object-oriented languages 24
Object-oriented software engineering 26

2.2 Abstraction 26
Encapsulation 27
Types of abstraction 27

2.3 Functional Abstraction 28
Function specifications 29
Function implementations 31
History sensitivity 32

2.4 Object Abstraction 34
Abstract state machines 35
Object implementation 38
Relationships 40
Composition 42
Messages 43

2.5 Class Abstraction 47
Abstract data types 48
Class implementation 51
Dependencies 53
Uniqueness 58
Cardinality 60
Inheritance 65
Polymorphism 70

Further Reading 73
Exercises 74

3. Process **77**

3.1 Requirements Definition 81

3.2 Domain Analysis 83
Static analysis 84
The domain model 90

3.3 System Analysis 93
Dynamic analysis 94
The system specification 103

Table of Contents
More information

3.4 System Design 105
From analysis to design 105
First iteration: A requirements validation prototype 107
Second iteration: A user interface prototype 108
Third iteration: A distributed system 111
Fourth Iteration: The production system 115

3.5 Summary 117

Further Reading 119
Exercises 120

Part II: Techniques 123

4. Classes and Dependencies 125

4.1 Classes 125

4.2 Dependencies 128
Monodirectional dependencies 129
Bidirectional dependencies 130
Relationship classes 133
Multiway relationships 135

4.3 Composite Classes 136
Composition attributes 137
Composition, association, and containment 140

4.4 Superclasses 141
Inheritance 142
Roles 145
Superclasses and composite classes 148

4.5 Subdomains 150
Subdomain diagrams 152
Defining subdomains 155

Further Reading 156
Exercises 157

5. Objects and Messages 161

5.1 Operations 161
Essential functionality 162
Constructors and destructors 168
Iterators 171

Table of Contents
More information

5.2 Event Analysis 173
Control objects 174
Recognizer objects 176
Scenarios 183
Dynamic relationships 187

5.3 Inheritance 189
The principle of substitutability 189
Self-reference 193
Delegation 199

Further Reading 205
Exercises 207

6. States and Transitions 209

6.1 State-Transition Analysis 209
State conditions 210
Transitions 212
Nested state conditions 213

6.2 Actions 217

6.3 Real-Time Behavior 222

Further Reading 225
Exercises 225

Part III: Applications 229

7. The Superbike Control System 231

7.1 Requirements Definition 231

7.2 Domain Analysis 234
The ride abstraction 234
The measurement abstraction 235
The bicycle control abstraction 236
The domain model 238

7.3 System Analysis 241
Bicycle control 241
Riding 243
Monitoring 250

Table of Contents
More information

7.4 System Design 255
System architecture 256
Monitoring 259
Ride control 263

Further Reading 266
Exercises 266

8. The Fantasy Baseball Statistics System 269

8.1 Requirements Definition 270
The real world 271
The fantasy world 276

8.2 Domain Analysis 278
Real baseball 278
Fantasy baseball 283

8.3 System Analysis 288
Creating a fantasy league 289
Handling draft day 296
Processing transactions 299
Generating standings 308

8.4 System Design 319
Data model 322
Transactions 329

Further Reading 334
Exercises 335

9. The ACME Satellite Data System 339

9.1 Requirements Definition 339
On-board computer 343
Mission control center 344
Operations concept 345

9.2 System Design 346
On-board data system architecture 346
MCC data system architecture 347

9.3 Domain Analysis 348
On-board computer 348
Mission control center 353
Domain model 357

Exercises 364

Afterword *367*

Appendices

A. Textual Notation 369

A.1 Class Specifications 369

A.2 Function Specifications 370
General 370
Direct selectors 371
Condition functions 371

A.3 Type Specifications 372

A.4 Messages 372

B. Graphical Notation 375

B.1 Class-Dependency Diagrams 375

B.2 Object-Message Diagrams 376

B.3 State-Transition Diagrams 377

C. Glossary of Concepts and Principles 379
