Preface xi

1 Historical overview 1
1.1 Historical introduction 1
1.2 Chronology of the development of the subject of stellar winds 5
1.3 Conclusions 6
1.4 Suggested reading 7

2 Observations of stellar winds 8
2.1 The formation of spectral lines in stellar winds 10
2.2 P Cygni profiles 13
2.3 Emission lines from winds 21
2.4 The infrared and radio excess from stellar winds 25
2.5 Molecular emission lines from the winds of cool stars 31
2.6 The infrared and millimeter radiation from dust 39
2.7 Mass loss rates and terminal velocities of winds from hot stars 46
2.8 Mass loss rates and terminal velocities of winds from cool stars 52
2.9 Conclusions 57
2.10 Suggested reading 58

3 Basic concepts: isothermal winds 60
3.1 Isothermal winds with gas pressure only 60
3.2 Isothermal winds with an $f \sim r^{-2}$ force 70
3.3 Isothermal winds with an $f \sim v(dv/dr)$ force 78
3.4 Isothermal winds with general additional forces 80
3.5 The analogy of rocket nozzles 82

Table of Contents
More information

3.6 Conclusions about isothermal winds 90
3.7 Suggested reading 91

4 Basic concepts: non-isothermal winds 92
4.1 Winds with momentum and energy deposition 93
4.2 Polytropic winds 102
4.3 The critical point of momentum equations with multiple zero-points 112
4.4 Conclusions about non-isothermal winds 116
4.5 Suggested reading 117

5 Coronal winds 118
5.1 The energy of a coronal wind with heat conduction 119
5.2 The momentum equation 121
5.3 The calculation of coronal wind models 123
5.4 A model for the solar corona 123
5.5 Mass loss rates and terminal velocities of coronal winds 125
5.6 Conclusions 126
5.7 Suggested reading 127

6 Sound wave driven winds 128
6.1 A particle in an oscillatory field 128
6.2 The acoustic wave luminosity 131
6.3 The pressure due to acoustic waves 134
6.4 Sound wave driven winds without dissipation 135
6.5 Sound wave driven winds with dissipation 141
6.6 Conclusions 143
6.7 Suggested reading 144

7 Dust driven winds 145
7.1 The physical processes of dust driven winds 147
7.2 The momentum of a continuum driven wind 151
7.3 Dust grain opacities 154
7.4 The temperature of grains and the wind inner boundary 161
7.5 Combined dust and gas flow 165
7.6 The mass loss rate of a dust driven wind 168
7.7 The supersonic structure of dust driven winds 172
7.8 Limits on the mass loss rates of dust driven winds 176
7.9 Conclusions 184
7.10 Suggested reading 185

8 Line driven winds 187
8.1 Physical processes in line driven winds 188
8.2 The energy and momentum of line driven winds 193
8.3 The absorption of photons in an expanding atmosphere 198
8.4 The Sobolev approximation 201
8.5 The radiative acceleration due to spectral lines 208
8.6 A realistic estimate of the radiative force due to lines 216
8.7 Line driven winds in the point source limit 222
8.8 A physical explanation of the line driven wind models 232
8.9 The correction for the finite size of the star 234
8.10 Multiple scattering 241
8.11 Wind blanketing 245
8.12 Rotating line driven winds 246
8.13 The instability of line driven winds 248
8.14 Conclusions 252
8.15 Suggested reading 253

9 Magnetic rotator theory 255
9.1 The equatorial wind theory 257
9.2 The angular momentum and energy constants 261
9.3 Angular momentum transfer 263
9.4 The purely radial wind equations 264
9.5 Magnetic energy transfer 265
9.6 Solution of the radial equation of motion 270
9.7 The fast magnetic rotator equations 275
9.8 The spin down times 286
9.9 Magnetic rotators in combination with other wind forces 288
9.10 Conclusions 291
9.11 Suggested reading 292

10 Alfvén wave driven winds 294
10.1 The wind equations with a varying transverse **B** field 296
10.2 The propagation of Alfvén waves 300
10.3 The radial momentum equation 304
10.4 Cold Alfvén wave driven winds 307
10.5 Conclusions 316
10.6 Suggested reading 317

11 Outflowing disks from rotating stars 319
11.1 Stars with ouflowing disks 320

Table of Contents
More information

11.2 Outflowing disks formed by rotation induced bi-stability 321
11.3 The wind compression model 331
11.4 Disk formation 346
11.5 2-D hydrodynamical results 349
11.6 Conclusions 351
11.7 Suggested reading 353

12 Winds colliding with the interstellar medium 355
12.1 The structure of wind-ISM interaction regions 356
12.2 The evolution of a wind bubble 362
12.3 The snowplow expansion of a wind bubble 365
12.4 Ring nebulae around Wolf-Rayet and newly formed O stars 370
12.5 Planetary nebulae 372
12.6 The deposition of mass and energy into the ISM 377
12.7 Conclusions 382
12.8 Suggested reading 383

13 The effects of mass loss on stellar evolution 385
13.1 The main effects of mass loss 385
13.2 The evolution of a 60 $M_\odot$ star with mass loss 388
13.3 The evolution of a 3 $M_\odot$ star with mass loss 391
13.4 Conclusions 397
13.5 Suggested reading 397

14 Problems 398
14.1 Answers 407

APPENDIX 1 **The chronology of stellar wind studies** 409
APPENDIX 2 **Elements of thermodynamics** 416
APPENDIX 3 **De l'Hopital's rule for equations with a singular point** 421
APPENDIX 4 **Physical and astronomical constants** 423
