Contents

eface *page* ix
Prologue **1**
Carolus J. Schrijver and George L. Siscoe
1.1 A voyage through the local cosmos 1
1.2 Magnetic field: a unifying force within heliophysics 15
1.3 The three-volume series 19
1.4 Additional resources 19
1.5 Editors' note 20
Introduction to heliophysics **21**
Thomas J. Bogdan
2.1 Preamble 21
2.2 What is heliophysics? 22
2.3 The language of heliophysics 24
2.4 The creation and annihilation of magnetic field 29
2.5 Magnetic coupling 31
2.6 Spontaneous formation of discontinuities 32
2.7 Explosive energy conversion 34
2.8 Generation of penetrating radiation 36
2.9 Concluding thoughts 40
Creation and destruction of magnetic field **42**
Matthias Rempel
3.1 Introduction – magnetic fields in the universe 42
3.2 Magnetohydrodynamics 44
3.3 The dynamo problem 50
3.4 Mean-field theory 57
3.5 Limitations of mean-field approximation, 3D simulations 71

Table of Contents
More information

4 Magnetic field topology **77**
Dana W. Longcope
4.1 Magnetic field lines 78
4.2 Regions of different topology 91
4.3 Magnetic helicity 99
5 Magnetic reconnection **113**
Terry G. Forbes
5.1 Preamble 113
5.2 Basic concepts 113
5.3 Reconnection in two dimensions 122
5.4 Reconnection in three dimensions 131
5.5 Topics for future research 137
6 Structures of the magnetic field **139**
Mark B. Moldwin, George L. Siscoe, and Carolus J. Schrijver
6.1 Preamble 139
6.2 Current sheets in cosmic plasmas 140
6.3 Magnetic flux tubes 145
6.4 Definition of a flux tube 146
6.5 Definition of a flux rope 149
6.6 Flux ropes at other planets 156
6.7 Magnetic cells 159
6.8 Summary 161
7 Turbulence in space plasmas **163**
Charles W. Smith
7.1 Preamble 163
7.2 Introduction 164
7.3 What observations characterize the solar wind? 167
7.4 The Navier–Stokes equation and hydrodynamic turbulence 172
7.5 Magnetohydrodynamic fluid turbulence 176
7.6 The spectrum of interplanetary turbulence 180
7.7 Non-Gaussianity in turbulent space plasmas 190
7.8 Turbulence in the solar corona and solar wind acceleration 191
7.9 Interstellar turbulence 193
7.10 Conclusion 194
8 The solar atmosphere **195**
Viggo H. Hansteen
8.1 Introduction 195
8.2 The photosphere 200
8.3 The high-β chromosphere 204

Edited by Carolus J. Schrijver and George L. Siscoe
Table of Contents
More information

8.5 Forward modeling of the outer solar atmosphere 216
8.6 The way forward 222
Stellar winds and magnetic fields 225
Viggo H. Hansteen
9.1 A pocket history 226
9.2 The Parker spiral 228
9.3 Some solar wind properties 230
9.4 A pocket history, continued 231
9.5 An interlude with Alfvén waves 233
9.6 The coronal helium abundance and the proton flux 236
9.7 The energy budget of the solar wind 238
9.8 A simple experiment 240
9.9 Solar wind models that include the chromosphere 243
9.10 Discussion and conclusions 248
Fundamentals of planetary magnetospheres 256
Vytenis M. Vasyliūnas
10.1 Introduction 256
10.2 Definitions and classifications 257
10.3 Interaction of solar wind with a planetary magnetic field 258
10.4 Plasma flow and magnetosphere–ionosphere interaction 265
10.5 Plasma sources and transport processes 277
10.6 Scaling relations for magnetospheres 285
Solar-wind–magnetosphere coupling: an MHD perspective 295
Frank R. Toffoletto and George L. Siscoe
11.1 Introduction 295
11.2 Global MHD models 296
11.3 The solar wind at Earth 300
11.4 Magnetosheath modeling 302
11.5 Forces on the magnetosphere 310
11.6 Magnetospheric convection 317
11.7 Energy flow in the magnetosphere 320
11.8 Summary 322
On the ionosphere and chromosphere 324
Tim J. Fuller-Rowell and Carolus J. Schrijver
12.1 Introduction 324
12.2 Forces and flows in the neutral atmosphere 325
12.3 Neutral-gas mixing, fractionation, and global circulation 330
12.4 Energy input and dissipation 333
12.5 Ionization fraction 336

Table of Contents
More information

12.7 Outstanding issues and science questions 349
12.8 Comparing the Sun's chromosphere and Earth's ionosphere 351
13 Comparative planetary environments 360
Frances Bagenal
13.1 Introduction 360
13.2 Jupiter 375
13.3 Saturn 384
13.4 Uranus and Neptune 388
13.5 Mercury and Ganymede 390
13.6 Objects without dynamos 391
13.7 Outstanding questions 398
Appendix I: Authors and editors 399
List of illustrations 401
List of tables 406
References 407
Index 428

The plates are to be found between pages 406 and 407.
