Introduction *page* xi
List of Participants xiii

1 Galaxy clusters as probes of cosmology and astrophysics
August E. Evrard 1
1.1 Introduction 1
1.2 Clusters as Dark Matter Potential Wells 4
1.3 Connecting Mass to Observables: Virial Scaling Relations 11
1.4 The Dark Matter Virial Relation 15
1.5 Interpreting $n(T)$: An Example of Cosmological-Astrophysical Confusion 18
1.6 Discussion 20
References 21

2 Clusters of galaxies in the Sloan Digital Sky Survey
Robert C. Nichol 24
2.1 Introduction 24
2.2 SDSS Cluster Catalogs 25
2.3 The C4 Algorithm 26
2.4 Luminous Red Galaxies 32
2.5 Galaxy Properties as a Function of Environment 34
2.6 Strangulation of Star Formation 37
References 40

3 Clustering studies with the 2dF Galaxy Redshift Survey
Warrick J. Couch, Matthew M. Colless, and Roberto De Propris 42
3.1 Introduction 42
3.2 Galaxy Clustering: Key Results 43
3.3 Cluster Luminosity Functions 45
3.4 Star Formation Versus Environment 50
References 57

4 X-ray surveys of low-redshift clusters
Alastair C. Edge 58
4.1 Introduction 58

Edited by John S. Mulchaey, Alan Dressler and Augustus Oemler
Table of Contents
More information

4.2 An Historical Perspective 60
4.3 X-ray Imaging Begins with *Einstein* 61
4.4 The X-ray Dark Ages 61
4.5 The Middle Age of X-ray Astronomy? 65
4.6 Can "Edge's Law" Hold? 68
4.7 Conclusions 69
4.8 A Coda 69
References 69

5 X-ray clusters at high redshift
Piero Rosati 72
5.1 Introduction 72
5.2 Evolution of the Cluster Abundance 73
5.3 Cosmology with X-ray Clusters 76
5.4 Distant X-ray Clusters: the Latest View from *Chandra* 80
5.5 Galaxy Populations in the Most Distant Clusters 82
5.6 Conclusions and Future Challenges 84
References 86

6 The red sequence technique and high-redshift galaxy clusters
Michael D. Gladders 89
6.1 Cluster Surveys 89
6.2 The CRS Method in Detail 91
6.3 The Red Sequence and Cluster Confirmation 94
6.4 The Red Sequence Cluster Survey 95
6.5 Summary and Future Directions 103
References 106

7 Probing dark matter in clusters
Ian Smail 108
7.1 Introduction 108
7.2 Lensing Methods 109
7.3 Comparing X-ray and Lensing Masses 114
7.4 Cluster Mass Profiles 117
7.5 Relating Galaxy Properties to their Dark Matter Environment 119
7.6 Summary 120
References 121

8 Clusters of galaxies: an X-ray perspective
Richard F. Mushotzky 123
8.1 Introduction 124
8.2 Temperature Structure of Clusters 126
8.3 Luminosity-Temperature Relation for Clusters 128
8.4 Optical Light, Velocity Dispersion, and X-ray Properties 129
8.5 Surface Brightness Profiles 131
8.6 Mass of Baryons and Metals and How They Are Partitioned 132

Table of Contents
More information

8.7 Mass Scaling Laws 133
8.8 Form of the Potential 133
8.9 Merges, Structures, etc. 134
8.10 Abundances 135
8.11 Conclusion 139
References 140

9 Cool gas in clusters of galaxies
Megan Donahue and G. Mark Voit 143
9.1 A Census of Cool Gas 143
9.2 The Cooling Flow Hypothesis 145
9.3 The Trouble with Cooling Flows 146
9.4 The Galaxy-Cluster Connection 150
9.5 The Revival of Conduction 155
9.6 Paths to a Resolution 156
References 157

10 Using the Sunyaev-Zel'dovich effect to probe the gas in clusters
Mark Birkinshaw 161
10.1 Introduction 161
10.2 The Physics of the Sunyaev-Zel'dovich Effect 162
10.3 Uses of the Sunyaev-Zel'dovich Effect in Cluster Studies 165
10.4 Instruments and Techniques 170
10.5 Summary 175
References 175

11 The formation of early-type galaxies: observations to $z \approx 1$
Tommaso Treu 177
11.1 Introduction 177
11.2 Evolution of the Number Density 179
11.3 Star Formation History 185
11.4 The Mass Density Profile of Distant E+S0 Galaxies 188
References 192

12 Evolution of early-type galaxies in clusters
Marijn Franx 196
12.1 A Working Definition 196
12.2 Homogeneity at Low Redshift 197
12.3 Evolution to $z = 1$ 198
12.4 Complex Models of Galaxy Evolution 200
12.5 Comparison of Field and Cluster Early-type Galaxies 200
12.6 Redshifts $\gg 1$ 202
12.7 Conclusion 204
References 204

13 Star-forming galaxies in clusters
Alan Dressler 206
13.1 Introduction 206
13.2 Connecting Star Formation History and Morphology in Cluster Galaxies 207
13.3 Today: The Cold Ashes of Today's Clusters 213
13.4 5 Gyr Ago: Flameouts of Dying Galaxies 214
13.5 One Billion Years ABB: A Cluster is Born 222
References 222

14 The stellar content of galaxy clusters
Roger L. Davies 227
14.1 Introduction 227
14.2 The Stars between Galaxies 228
14.3 Stars in Galaxies 230
14.4 The Decoupled Core in NGC 4365 240
14.5 Summary 241
References 242

15 Modeling stellar populations in cluster galaxies
Bianca M. Poggianti 245
15.1 Introduction 245
15.2 k+a Spectra 246
15.3 Emission-line Spectra and Dust 249
15.4 Passive Galaxies and Evolutionary Links 250
15.5 Summary 256
References 257

16 The chemistry of galaxy clusters
Alvio Renzini 260
16.1 Introduction 260
16.2 The Heavy Elements in Clusters: ICM and Galaxies 261
16.3 Metal Production: The Parent Stellar Population 266
16.4 Metal Production: Type Ia vs. Type II Supernovae 267
16.5 Metals from Galaxies to the ICM: Ejection vs. Extraction 268
16.6 Metals as Tracers of ICM Preheating 269
16.7 Clusters vs. Field at $z = 0$ and the Overall Metallicity of the Universe 270
16.8 The Major Epoch of Metal Production 271
16.9 The Early Chemical Evolution of the Milky Way 272
16.10 Summary 273
References 274

17 Interactions and mergers of cluster galaxies
J. Christopher Mihos 277
17.1 Interactions of Cluster Galaxies 277
17.2 Lessons from the Field ... 280
17.3 ... Applied to Clusters 282

17.4 Galaxy Evolution: Mergers, Elliptical, and S0 Galaxies 286
17.5 Tidal Stripping and Intracluster Light 288
References 293

18 Evolutionary processes in clusters
Ben Moore 295
18.1 Introduction 295
18.2 The Paradigms for Disk and Spheroid Formation 296
18.3 Mechanisms for Transformation 297
18.4 A New Paradigm for the Formation of S0/dS0/dE/dSph/UCD Galaxies 299
18.5 Conclusions 303
References 303

19 Interaction of galaxies with the intracluster medium
Jacqueline H. van Gorkom 305
19.1 Introduction 305
19.2 The Statistics of H I Deficiency 307
19.3 Simulations 309
19.4 Comparison of Simulations with H I Imaging 310
19.5 Surveys and the Importance of Interactions with the ICM 317
19.6 Concluding Remarks 320
References 322

20 The difference between clusters and groups: a journey from cluster cores to their outskirts and beyond
Richard G. Bower and Michael L. Balogh 325
20.1 Introduction 325
20.2 Clusters of Galaxies 326
20.3 The Other Axis: Density 329
20.4 What Does It All Mean? 334
References 339

21 Galaxy groups at intermediate redshift and the mechanisms of galaxy evolution
Ray G. Carlberg 343
21.1 Introduction 343
21.2 Properties of the CNOC2 Groups 344
21.3 Group Galaxy Evolution 346
21.4 Radial Color Gradients of Groups 347
21.5 Merging and the Inward Flow of Group Galaxies 348
21.6 Consequences of Galaxy Evolution in Groups 351
21.7 Conclusions 351
References 351

22 The intragroup medium

22.1 Introduction 353
22.2 *ROSAT* Studies 354
22.3 Spatial Properties of the Intragroup Medium 355
22.4 Spectral Properties of the Intragroup Medium 359
22.5 Mass and Baryon Fraction Estimates 362
22.6 Evidence for "Additional" Physics 363
22.7 The Intragroup Medium in The Local Group 366
22.8 Concluding Remarks 367
References 367

23 Symposium summary
Jeremiah P. Ostriker 371
23.1 Introduction 371
23.2 Important Results Addressed by Speakers 371
23.3 EROs 372
23.4 Observations, Phenomenology, and Data Interpretation 374
23.5 Methodology and Technology 375
23.6 Important Results Based on Clusters Not Addressed 376
23.7 Discussion 376
