Contents

Preface *page* **ix**

1. Introduction: Why study fossil horses? **1**
The lore of horses and humans / 1
Rationale, purpose, and scope / 11

2. A renaissance in paleontology **13**
The growth of vertebrate paleontology / 13
The past few decades: a modern renaissance / 16
New fossil discoveries / 24
The new paleobiology / 24

3. Orthogenesis and scientific thought: old notions die hard **27**
The foundations of orthogenesis / 27
Marsh and fossil horses / 29
Orthogenetic concepts and causality / 34
Other views of fossil horses: a complexly branching tree / 37
The spread of orthogenesis: old notions die hard / 39

4. Collections, museums, and exceptional discoveries **49**
The antiquity and development of collecting fossil vertebrates / 49
The importance of museum collections / 53
Fossil horses, exceptional discoveries, and *Lagerstätten*: six case studies / 63
Epilogue: conservation of threatened sites / 77

Bruce J. MacFadden
Table of Contents
More information

5. Systematics and phylogeny: Ungulata, Perissodactyla, and Equidae **79**
History of development of systematic thought: Ungulata and Perissodactyla / 81
Monophyly and close relatives of the Perissodactyla / 86
Perissodactyl clades: the cast of characters / 89
The phylogenetic position of *Hyracotherium* / 90
Grades, clades, and horses / 96
Major clades of New World Equidae / 98
Comments on the systematics of the Equidae / 117

6. Isotopes, magnetic reversals, fossils, and geological time **121**
Relative geological time / 122
"Absolute" geological time: isotopes and paleomagnetism / 124
Development of Cenozoic land-mammal chronology and fossil horses / 130
Concluding remarks / 142

7. Ancient geography, changing climates, dispersal, and vicariance **143**
Biogeography before plate tectonics / 144
Determinants of land-mammal distribution / 145
Centers of origin and patterns of dispersal / 150
Plate tectonics, Noah's Arks, vicariance, and isotopes / 152
Distribution of fossil horses throughout the Cenozoic / 156
Concluding comments / 162

8. Evolutionary processes: variation, speciation, and extinction **165**
Phenotypic variation and selection: the raw material and evolutionary catalyst / 165
Species recognition in paleontology / 169
Interpreting anagenesis and cladogenesis from the fossil record: theoretical and practical considerations / 171

Cambridge University Press
0521340411 - Fossil Horses: Systematics, Paleobiology, and Evolution of the Family Equidae
Bruce J. MacFadden
Table of Contents
More information

Speciation of fossil horses in North America / 174
Key characters, adaptive radiations, and clade evolution / 181
Extinction / 183

9. Rates of morphological and taxonomic evolution **189**
Quantifying rates of morphological evolution: Haldane and darwins / 190
Rates of morphological change in fossil horses / 193
Allometry and scaling of horse evolution: Does ontogeny recapitulate phylogeny? / 196
Taxonomic evolution: origination, duration, and extinction / 200
Concluding remarks: Are evolutionary rates gradual or punctuated? / 211

10. Trends, laws, direction, and progress in evolution **213**
Fossil horses and classic trends in evolution / 214
Cope's law and the evolution of body size in horses / 216
Dollo's law, atavisms, and the irreversibility of evolution / 223
Progress and purpose in evolution / 224

11. What's the use? Functional morphology of feeding and locomotion **229**
Feeding: herbivorous ungulates and hypsodonty / 229
Horses and herbivory / 236
Locomotion and the evolution of cursoriality / 246
Concluding comment: horse chauvinism / 261

12. Population dynamics, behavioral ecology, and "paleoethology" **263**
Behavioral ecology and social organization of modern equids / 264
Behavioral ecology and social organization of fossil horses: juggling the parameters / 269

CAMBRIDGE

Cambridge University Press
0521340411 - Fossil Horses: Systematics, Paleobiology, and Evolution of the Family Equidae
Bruce J. MacFadden
Table of Contents
More information

Sex in fossil horses / 272
Age structure and population dynamics / 273
Evolution of body size, vegetation, habitat, and climate: implications for the population biology of fossil Equidae / 277
Evolution of selected life-history strategies from *Hyracotherium* to *Equus*: a summary / 290
Concluding remarks: Does behavior fossilize? / 297

13. Fifty-eight million years of community evolution **299**
Chronofaunas and paleoguilds / 299
Cenozoic terrestrial communities in North America and fossil horses / 304
Patterns of community structure: selected topics related to fossil horses / 311
Concluding comments on paleoecology of Cenozoic mammals / 320

14. Epilogue **323**
Dominant themes / 323
The future of paleontology / 327
Concluding comments: So, where do we go from here? / 330

Appendix **333**
I. Abbreviations and conventions used in the text / 333
II. Classification of the Equidae / 335
