Abraham, Pol 66f., 88f.
Ackerman, J.S. 2
ad quadratum, ad triangulum 148
Amiens cathedral 51, 103ff.
Anthemios 2, 5
arch, masonry
  collapse 4, 18f.
  flat arches infinitely strong 20
  geometrical factor of safety 20ff.
  hinges in 4, 15ff.
  line of thrust 7, 17f.

Basilica of Maxentius 51
Bologna, S. Petronio 26
boundary conditions 8, 9
Brunelleschi 26, 27, 42, 46f., 150

Cambridge, King's College Chapel 78, 79, 81f., 91f., 152, 154
chain, hanging 7, 18, 28, 36, 81f., 154
Choisy, A. 3, 43ff.
cracking of masonry 15ff., 23, 35f.
crossing piers 13, 24, 116, 118
crushing strength 12, 13, 30

dome 27ff.
  cracking 35f., 46f.
  half dome as buttress 43
  hoop stresses can be tensile 33
  low stresses 30
  minimum thickness 39ff.
  Poleni's analysis 35ff.
  as a shell 27f.
drift of masonry 84f., 87, 110f., 119

earthquakes 1, 4, 71
Ely, Cathedral 25, 110, 119ff.
Ezekiel 141f.

fire, effects of 71f.
Florence, Brunelleschi's dome 27, 42, 46f.
flying buttress 91ff.
  failure at Amiens 103f.
  as flat arch 20
  passive and active states 98ff.
  position of 58
  to resist wind 24, 91f.
  Ungewitter's analysis 95ff.
foundations, movement of 1, 15, 23, 46, 49, 68, 110, 118f.
friction forces 13, 90

Galileo 5, 26, 154
Gaudí, A. 95
Gaussian curvature 76
geometrical factor of safety 20ff.
great measure 141f., 148f.
Guadet, N. 91

Hagia Sofia, Constantinople 1, 2, 5, 27, 41, 43ff.
Harvey, J. 2
hinging cracks
  in arches 16ff.
  in vaults 49
Hooke, Robert 7, 18, 28, 36, 154

irrational numbers 142
Isidorus 2, 5

lightning, effects of 110f.
Lincoln, Chapter House 103

mechanism of collapse 4, 18f.
Mignot 149f.
Milan cathedral 2, 88, 148ff.

Navier, C.L.M.H. 6, 8

Pantheon, Rome 4, 28, 29, 50
Paris, Notre-Dame 75, 91, 101f.
Paris, Sainte-Chapelle 91, 152, 154
Paris, Sainte-Geneviève 86f.
pendentives 27

More information

Peterborough Cathedral 79ff.
plastic design 10f., 18
  'safe' theorem 22f., 36
  theorems of 14
Poleni, G. 7, 35ff., 40

Renaissance 2, 150ff.
ribs, function of 46, 47, 52ff., 73
ringing cracks 124f.
rubble masonry 84, 86

St Paul's Cathedral 27, 153f.
St Peter's, Rome 7, 27, 29, 35, 40, 46f., 50
Sabouret's cracks 66f.
'safe' theorem 22f., 36
settlement 23ff.
  collapse due to 25
  cracking due to 23
  of crossing towers 118f.
  overall geometry unchanged 23
  time scale 24
shell structures 3, 28ff., 52ff., 75ff.
Smithfield Market 29
spalling 18, 86
spires 127ff.
  open faces 134f.
  stresses in 132f.
  thickness of faces (Ungewitter) 127, 133, 136
  tilted 136
  timber, twisted 137f.
  tip vulnerable to wind 129
  weighted vane rod 130f.
stress
  crushing 12, 13, 30
  factor of safety on 12, 13
  lack of tensile strength 12, 14
  low compressive values 12–14
  working values 6, 13
structural design
  equations of 6, 8, 15
  limit states 3
  proportion, rules of 4, 5, 141, 151ff.

thrust, line of 7, 20ff.
  in vaulting ribs 59f.
towers 109ff.
  collapse 25, 109f.
  effect of lightning 111
  forces due to bell ringing 121ff.
  ringing cracks 124
  settlement 112, 118
  support at crossing 118
  ties to control drift 119
  wind loads 125
turnips 26
tying, of towers 119f.

vaulting conoid 58, 82, 107
vaults 48ff.
  cracking 49, 66ff.
  'creases' in surface 46, 53f., 73
  construction v. behaviour 49f.
  effects of fire on 71f.
  fireproof 48
  function of ribs 46, 47, 52ff., 73
  groins 46, 51ff.
  thrust of 62ff.
  not waterproof 48
Vitruvius 2, 3, 4, 139, 142, 150
voussoir arch *see* arch, masonry

Westminster Abbey 91, 94f.
wind forces 24, 125, 129ff.
Wren, Christopher 27, 154
