CONTENTS

PREFACE *page* ix

PART I. STATIC ELECTRON OPTICS

I The Variational Equation

1.1 Introduction 1

1.2 Electron-optical units 3

1.3 Derivation of the variational equation 6

1.4 The electrostatic lens 10

1.5 The magnetic lens 18

II Classical Geometrical Optics

2.1 Introduction 24

2.2 Hamilton's characteristic functions 25

2.3 The Lagrange invariant 30

2.4 Perturbation characteristic functions 34

2.5 The reciprocal and imaging relations 39

2.6 Normal congruences 47

2.7 The Hamilton-Jacobi equation 53

III Instrumental Electron Optics

3.1 Introduction 61

3.2 Curvilinear co-ordinates 62

3.3 The paraxial approximation 65

3.4 Gaussian dioptrics 72

3.5 Perturbation characteristic functions 81

IV The Rotationally Symmetrical System

4.1	Introduction	*page* 91
4.2	The paraxial imaging properties	92
4.3	Third-order aberrations	95
4.4	Chromatic aberration and the relativistic correction	108
4.5	Space charge and space current	113
4.6	Asymmetries of electron lenses	118

V Systems of Mirror Symmetry

5.1	Introduction	123
5.2	The variational functions	125
5.3	The aberration characteristic functions	128
5.4	β-ray spectrographs	130
5.5	Mass spectrographs	137
5.6	Cathode-ray-tube deflectors	140

PART II. DYNAMIC ELECTRON OPTICS

VI Uniform Focusing in Particle Accelerators

6.1	Introduction	148
6.2	The variational equation	151
6.3	The adiabatic invariants	159
6.4	The synchrotron	166
6.5	Perturbation calculations	172
6.6	The linear electron accelerator	179

VII Periodic Focusing in Particle Accelerators

7.1 Introduction *page* 186

7.2 The paraxial theory 189

7.3 The adiabatic invariants 196

7.4 Perturbation calculations by variation of parameters 202

7.5 Perturbation calculations by matrix methods 205

7.6 The diagonal representation 211

7.7 Instability due to linear coupling 215

7.8 The strong-focusing synchrotron 220

7.9 Non-linear effects 225
