accretion
  Earth, 113–16, 127–8
    heterogeneous, 102–5
    homogeneous, 98–101
    late veneer, 86–8, 181
    timing, 127–8, 129–32, 134–7, 151–2
  planetary, 3–4
achondrites (meteorites), 8
Adams-Williamson relation, 433–4
adiabat, mantle, 341, 356–7, 358, 412, 414, 416, 440
age of Earth, 131–4, 136–7, 248
analogue element abundance ratios, 66–9
anisotropy, seismic, 383, 385–6, 400, 409, 422–3, 521
ankaramite, 365, 368
anticracks, 544
argon, 169–71
asteroid, 4–5
asthenosphere, petrological, 316, 341–7, 353, 358–9
atmosphere
  Earth, 162–3, 178
    evolution of, 179–81
  Mars, 162–3
  Venus, 162–3
attenuation, seismic-wave
  interpretation, 424–6
  observations, 383, 385, 386, 388, 410

basalt, *see* flood basalt; magma genesis; magmatism; mid-ocean-ridge basalt; ocean-island basalt
boninite, 365, 366, 368
boundary layer, thermal, 195–7, 229–31
  lower, 197–8, 229–31
    compositional variability 284–6
    plume sampling 198, 259, 284–6
  mid-mantle, 239, 259, 262, 301, 439
  upper, 196, 211–12, 231–2, 253
    see also lithosphere
brittle–ductile transition, 510–11
Bulk Silicate Earth (BSE), 38–9
  chalcophile elements, 64–5
  compatible minor/trace elements, 60–4
    Mn/Na ratio *vs.* chondrites, 78–80
  differentiation, 39–43
  highly incompatible elements, 70–1
  incompatible elements, 65–70
  major elements 49–59
    Mg/Si/Al ratio *vs.* chondrites, 74–5
  siderophile element depletion, 84–6
    interpretation, 98–9
    see also core formation
bulk sound speed, 386–7, 427
buoyancy
  as driving force for convection, 197–8, 211–12, 229–31, 233
  flux, mantle plumes, 206–8
    see also convection, mantle

calorimetry, 413–14, 451
carbonate, 329, 335–8, 364
carbonatite, 335–9, 359–60, 366–7
chondrite, 8, 10
  carbonaceous, 10–12, 14–16, 26–35
  enstatite, 13, 14, 15, 26, 35
  ordinary, 12, 14, 15, 24, 25–35
chondrules, 10
Clapeyron slope, 240–1, 413–4, 539
composition, mantle (*see also* Bulk Silicate Earth; lower mantle; mid-ocean-ridge basalt, source; ocean-island basalt, source; pyrolite model; upper mantle), 48–72, 316–21, 354–5
  layering?, 72–4, 246–8, 250–1, 439
composition, solar, 7, 16
condensation temperature, 19, 21–3
conduction, heat, 235, 236–7
conduit, *see* plume, mantle
constitutive law, 466–7, 504–5, 510–11, 548
continental crust
  complementarity to depleted mantle, 41, 128–9, 144–5, 147
  composition, 43, 129
  contamination of flood basalts, 288
  growth, 146–51
  recycling, 146–51
    see also geochemical reservoir
convection, mantle
  buoyancy as driving force, 197–8, 211–12, 229–31
  forms of motion, 197–8, 211–12, 229–31
    plate-scale flow, 233–4
    plumes, 234
      see also plume, mantle

subsolidus mineralogy
lower mantle, 411, 412–13, 416–17
transition zone, 411, 412–13, 538–9
upper mantle, 319, 324–5, 333–5

radioactive heat generation, *see* heat budget, radioactive
rare earth elements (REEs), fractionation, 141
Rayleigh number
mantle, 194, 195, 196
plume, 199, 201, 205
Rayleigh waves, 395
recrystallization, 507, 513, 516, 517, 519, 523–6, 529, 546
recycling, crustal, 146–51
redox reactions, mantle, 341, 344–51, 362, 366
refractory lithophile elements (RLEs), 23, 37
reservoir, geochemical, *see* geochemical reservoir
rheology, 504, 508–10
mantle, 193
effect of heterogeneity, 533–4
effect of polyphase mineralogy, 533–4
influence of transformations, 542–5
lithosphere, 510–11, 523, 525–6
lithospheric shear zones, 526–7
mid-ocean-ridge environments, 523, 524
sub-lithospheric environments, 523–7
rock deformation, experimental, 513–18, 529–33, 545–6, 547, 548

satellite orbits, 464, 489–96
sea-level change, 464
British Isles, 481–2, 483–4
eustatic, 479, 481
observations, 474–8, 479–82
present rate, 492–6
theory, 471–3
seismic event relocation, 384, 389
seismic parameter, 405, 422
seismic structure, mantle
radial, 383–4
D″ layer, 387
lower mantle, 386–7
transition zone, 384–6, 407–8
upper mantle, 384–6
see also discontinuity, seismic; lower mantle; transition zone
three-dimensional, 381–2, 408–10
continental regions, 394–400
subduction zones, 388–94
see also heterogeneity, mantle, seismic
seismic tomography, 240, 382, 384, 387–8, 389
seismic velocity gradient, 381, 382, 385, 386, 395, 407, 432
seismicity, 388, 389, 392, 394
seismograms, broad-band, 385
seismology, 381–2
shear-wave splitting (*see also* anisotropy, seismic), 385–6
shear zone
transformational faulting, 543–4
upper mantle, 526–7
short-lived isotopes, *see* extinct isotopes
siderophite element depletion, *see* Bulk Silicate Earth, siderophite element depletion
slab, lithospheric
buckling at discontinuity, 212–15, 390, 393
buoyancy
chemical, 254, 413, 415
thermal, 196, 211–13
transformational, 240–2, 249, 414–15
fluid-dynamical experiments, 213–17
petrology, 354, 362–4
seismic tomographic images, 240, 382, 389–93
thermal structure, 388
viscous entrainment, 213–14
see also subduction
small-scale flow, mantle, 233
solar composition, 7, 16
solar energetic particles, 162
solar nebula, 3, 19
composition, 16
homogeneity, 7
isotopic anomalies, 5–7
solidus
anhydrous, 325–8, 358, 414, 416
dehydration, 333–5, 339
fluid-saturated, 331–3, 335–9, 366–8
see also magma genesis; pyrolite model

978-0-521-78566-2 - The Earth's Mantle: Composition, Structure, and Evolution
Edited by Ian Jackson
Index
More information

stirring, mantle, 218–23
strontium isotopes
  Earth, 134–5
  meteorites, 135
subducted slab, *see* slab, lithospheric
subduction, 233
  chemical buoyancy, 254, 413, 415–16
  effect of phase transitions, 393, 414–15, 534, 539–42, 543–4
  effect of trench migration, 215–17, 393
  laboratory modelling, 213–17
subduction zone
  magmatism, 355, 363–8
  seismic images, *see* slab, lithospheric
surface loads, resulting deformation, *see* Earth, deformation by surface loads
surface uplift due to plumes, 210
surface waves, 381, 383, 387, 395
  higher modes, 395, 396, 397–8

tectonic evolution, 251–5
tectonic motion, vertical, 478
tectonics, Archaean, 153–4, 252, 303–5
thermal boundary layer, *see* boundary layer, thermal
thermal diffusion timescale, 235
thermal evolution, mantle, 248–51
thermal pressure, *see* equation-of-state
thermals, 198–200
three-dimensional structure, seismic, *see* seismic structure, mantle, three-dimensional
Titius-Bode law, 4
tomography, seismic, 240, 382, 384, 387–8, 389
topography
  constraint on scale of convection, 239–40
  hot-spot swell, 237–8
  mid-ocean ridge, 235–6
transformational plasticity, 509–10, 544
transition zone, rheology, 533–4, 534–6, 539–42, 543, 546
transition zone, seismic structure, 384–6, 391–2, 394–5
  amplitude of seismic discontinuities, 407, 432
  extrapolated laboratory data *vs.* observed wavespeeds
    bulk sound speed, 429–31
    compressional and shear waves, 431–2
    uncertainties, 431
  modelling strategy, 427–8
  reflectivity of seismic discontinuities, 408, 432–3, 450
  wave speed–depth gradients, 430, 432
travel-time inversion, 383, 387
travel times, seismic-wave, 382, 383, 387
trench migration, effect on subduction, 215–17, 393
tungsten isotopes, 105–8, 137–8

upper mantle composition
  xenoliths, 43–5, 316–21, 354–5
  see also Bulk Silicate Earth; pyrolite model
upper mantle seismic structure, *see* heterogeneity, mantle, seismic; seismic structure

viscoelasticity (*see also* deformation, constitutive law), 424–6, 461–2, 466–7, 469–71
viscosity
  effect on mixing rates, 222–3
  effective, 193, 467, 488, 512, 529, 536
  mantle, 193, 196, 245–6, 461–2, 465, 482, 494, 497–8
    from laboratory flow laws, 534–6, 548
    lower, 482, 486–9, 494
    upper, 486–9, 494
  Newtonian materials, 512
  variation with temperature, 193
    see also enthalpy, activation
volatile element fractionation
  Bulk Silicate Earth, 75–8
    timing, 134–7
  nebular, 33–5
volatility, cosmochemical, 19
volcanoes, correlation with seismic anomalies, 399

wall-rock reaction, 312, 348, 353, 358
water in mineral phases, influence on rheology, *see* deformation, effect of water
waveform inversion, 383, 387, 395, 396, 397–8

xenoliths, mantle, 44–5
xenon, 171–3
