1 Introduction **1**
1.1 Introduction 1
1.2 About model theory 7

2 Topological structures **12**
2.1 Basic notions 12
2.2 Specialisations 14
2.2.1 Universal specialisations 17
2.2.2 Infinitesimal neighbourhoods 19
2.2.3 Continuous and differentiable function 22

3 Noetherian Zariski structures **25**
3.1 Topological structures with good dimension notion 25
3.1.1 Good dimension 25
3.1.2 Zariski structures 26
3.2 Model theory of Zariski structures 27
3.2.1 Elimination of quantifiers 27
3.2.2 Morley rank 30
3.3 One-dimensional case 30
3.4 Basic examples 35
3.4.1 Algebraic varieties and orbifolds over algebraically closed fields 35
3.4.2 Compact complex manifolds 36
3.4.3 Proper varieties of rigid analytic geometry 38
3.4.4 Zariski structures living in differentially closed fields 39
3.5 Further geometric notions 40
3.5.1 Pre-smoothness 40

3.5.2 Coverings in structures with dimension 43
3.5.3 Elementary extensions of Zariski structures 44
3.6 Non-standard analysis 50
3.6.1 Coverings in pre-smooth structures 50
3.6.2 Multiplicities 53
3.6.3 Elements of intersection theory 57
3.6.4 Local isomorphisms 59
3.7 Getting new Zariski sets 62
3.8 Curves and their branches 69

4 Classification results 78
4.1 Getting a group 78
4.1.1 Composing branches of curves 79
4.1.2 Pre-group of jets 82
4.2 Getting a field 88
4.3 Projective spaces over a Z-field 93
4.3.1 Projective spaces as Zariski structures 93
4.3.2 Completeness 94
4.3.3 Intersection theory in projective spaces 95
4.3.4 Generalised Bezout and Chow theorems 97
4.4 The classification theorem 100
4.4.1 Main theorem 100
4.4.2 Meromorphic functions on a Zariski set 101
4.4.3 Simple Zariski groups are algebraic 103

5 Non-classical Zariski geometries 105
5.1 Non-algebraic Zariski geometries 105
5.2 Case study 109
5.2.1 The N-cover of the affine line 109
5.2.2 Semi-definable functions on P_N 109
5.2.3 Space of semi-definable functions 111
5.2.4 Representation of $\mathcal{A}$ 111
5.2.5 Metric limit 115
5.3 From quantum algebras to Zariski structures 120
5.3.1 Algebras at roots of unity 122
5.3.2 Examples 125
5.3.3 Definable sets and Zariski properties 134

6 Analytic Zariski geometries 137
6.1 Definition and basic properties 137
6.1.1 Closed and projective sets 138
6.1.2 Analytic subsets 139

Table of Contents
More information

6.2 Compact analytic Zariski structures 140
6.3 Model theory of analytic Zariski structures 144
6.4 Specialisations in analytic Zariski structures 153
6.5 Examples 155
6.5.1 Covers of algebraic varieties 155
6.5.2 Hard examples 159

A Basic model theory 163
A.1 Languages and structures 163
A.2 Compactness theorem 166
A.3 Existentially closed structures 170
A.4 Complete and categorical theories 172
A.4.1 Types in complete theories 175
A.4.2 Spaces of types and saturated models 177
A.4.3 Categoricity in uncountable powers 182

B Elements of geometric stability theory 185
B.1 Algebraic closure in abstract structures 185
B.1.1 Pre-geometry and geometry of a minimal structure 186
B.1.2 Dimension notion in strongly minimal structures 189
B.1.3 Macro- and micro-geometries on a strongly minimal structure 194
B.2 Trichotomy conjecture 200
B.2.1 Trichotomy conjecture 200
B.2.2 Hrushovski's construction of new stable structures 202
B.2.3 Pseudo-exponentiation 205
