List of symbols and abbreviations xxi

Part I Dark matter in cosmology 1

1 Particle dark matter *G. Bertone and J. Silk* 3
1.1 Introduction 3
1.2 The baryon budget 4
1.3 The case for cold dark matter: good news and bad news 5
1.4 Portrait of a suspect 7
1.5 Observing cold dark matter 10
1.6 The future 12

2 Simulations of cold dark matter haloes *B. Moore and J. Diemand* 14
2.1 From cold collapse to hierarchical clustering – a brief history 14
2.2 Results from collisionless simulations 17
2.3 Predictions for direct and indirect detection experiments 34

3 Milky Way satellites *J. Bullock, M. Kaplinghat and L. Strigari* 38
3.1 Satellite galaxies 38
3.2 Streams 46
3.3 Central profiles and the nature of dark matter 48
3.4 Indirect detection of dark matter from Milky Way satellites 51
3.5 Future prospects 55

4 Gravitational lensing and dark matter ***Y. Mellier*** 56
4.1 Introduction 56
4.2 Gravitational lensing theory 57
4.3 Evidence for dark matter from strong lenses 63
4.4 Cold dark matter confronted to gravitational lenses 65
4.5 Hot dark matter: limits on neutrino masses from lensing 77
4.6 Dark matter or modified gravity? 78
4.7 Conclusion and outlook 80

5 Dark matter at the centres of galaxies ***D. Merritt*** 83
5.1 Phenomenology of galactic nuclei 83
5.2 Dark matter models 86
5.3 Dark matter in collisionless nuclei 88
5.4 Dark matter in collisional nuclei 92
5.5 The Galactic centre 94
5.6 Dwarf spheroidal galaxies 97

6 Modified gravity as an alternative to dark matter ***J. D. Bekenstein*** 99
6.1 Missing mass in galaxies and clusters of galaxies 99
6.2 The MOND scheme 102
6.3 Modified gravity theory for MOND 105
6.4 TeVeS and other relativistic MOND theories 109
6.5 Gravitational lenses and cosmology in TeVeS 112

Part II Candidates 119

7 DM production mechanisms ***G. Gelmini and P. Gondolo*** 121
7.1 Dark matter particles: relics from the pre-BBN era 121
7.2 Thermal production in the standard cosmology 123
7.3 Non-thermal production in the standard cosmology 130
7.4 Thermal and non-thermal production in non-standard cosmologies 133

8 Supersymmetric dark matter candidates ***J. Ellis and K. A. Olive*** 142
8.1 Motivations 142
8.2 The MSSM and ***R***-parity 144
8.3 Possible supersymmetric dark matter candidates 147
8.4 Renormalization-group equations and electroweak symmetry breaking 151
8.5 The CMSSM 153

8.6 mSUGRA 159
8.7 Other possibilities 161
8.8 Summary 162

9 Dark matter at the electroweak scale: non-supersymmetric candidates ***G. Servant*** 164
9.1 New symmetries at the TeV scale and dark matter 166
9.2 Dark matter from extra dimensions: Kaluza–Klein DM 167
9.3 Little Higgs dark matter 182
9.4 Dark matter in technicolour and composite Higgs theories 183
9.5 Mirror dark matter 183
9.6 'Minimal' approaches 184
9.7 WIMPonium 188
9.8 Connecting dark matter and the baryon asymmetry 188
9.9 Conclusion 189

10 Non-WIMP candidates ***J. L. Feng*** 190
10.1 Motivations 190
10.2 SuperWIMP dark matter 191
10.3 WIMPless dark matter 198

11 Axions ***P. Sikivie*** 204
11.1 Introduction 204
11.2 Axion production in the early Universe 208
11.3 Relic density and primordial velocity dispersion 219
11.4 Axion miniclusters 222
11.5 Axion isocurvature perturbations 224

12 Sterile neutrinos ***M. Shaposhnikov*** 228
12.1 Particle physics motivation 228
12.2 Cosmological and astrophysical constraints on sterile neutrino dark matter 232
12.3 Sterile neutrino production in the early Universe 239
12.4 Conclusions 247

Part III Collider searches 249

13 SUSY searches at the LHC ***T. Plehn and G. Polesello*** 251
13.1 Discovery channels 252
13.2 LHC measurements 255
13.3 Parameter extraction 264
13.4 Dark matter and the LHC 274
13.5 Outlook 275

Table of Contents
More information

14 Supersymmetric dark matter at colliders ***M. Battaglia and M. E. Peskin*** 276
14.1 Introduction 276
14.2 Questions for the collider experiments 279
14.3 Dark matter at hadron colliders 285
14.4 Dark matter at lepton colliders 293
14.5 Collider measurements and astrophysical questions 303

15 Extra dimensions at the LHC ***K. Kong, K. Matchev and G. Servant*** 306
15.1 Flat extra dimensions (UED) 306
15.2 Warped extra dimensions 311
15.3 SUSY–UED discrimination at the LHC 317

16 SUSY tools ***F. Boudjema, J. Edsjö and P. Gondolo*** 325
16.1 Annihilation cross-section and the relic density 326
16.2 Direct detection 331
16.3 Indirect detection 334
16.4 Exploring the parameter space 338
16.5 Interface with collider and precision measurements codes 340

Part IV Direct detection 345

17 Direct detection of WIMPs ***D. G. Cerdeño and A. M. Green*** 347
17.1 Introduction 347
17.2 Event rate 347
17.3 Astrophysics input 353
17.4 Signals 356
17.5 Particle physics input 362

18 Annual modulation signature with large mass highly radiopure NaI(Tl) ***R. Bernabei and P. Belli*** 370
18.1 The annual modulation signature and the target material 370
18.2 The DAMA/NaI and DAMA/LIBRA experiments 373
18.3 The model-independent results 374
18.4 The corollary quests for the candidate particle(s) 379
18.5 Comparison with other activities 380
18.6 Future perspectives 381

Table of Contents
More information

19 Particle dark matter and the DAMA/NaI and DAMA/LIBRA annual modulation effect ***N. Fornengo*** 383
19.1 The DAMA annual modulation effect 383
19.2 Supersymmetric candidates 386
19.3 Additional candidates 389

20 Cryogenic detectors ***G. Gerbier and J. Gascon*** 391
20.1 Introduction 391
20.2 Principles of operation of solid state cryogenic detectors 392
20.3 Single parameter detectors 398
20.4 Ionization phonon bolometers 401
20.5 Scintillation phonon bolometers 404
20.6 MACHe3 409
20.7 Prospects for 1 ton detectors 410

21 Liquid noble gases ***E. Aprile and L. Baudis*** 413
21.1 Noble liquids for dark matter detection 413
21.2 Two-phase XeTPCs: XENON, ZEPLIN and LUX 420
21.3 Two-phase ArTPCs: WArP and ArDM 428
21.4 Single-phase detectors: XMASS, DEAP/CLEAN 432

22 Directional detectors ***N. Spooner*** 437
22.1 Direct dark matter detection technologies and directionality 437
22.2 The directional signature and statistics 438
22.3 Directional detector concepts 440
22.4 Gas detector physics – diffusion and straggling 442
22.5 TPC gamma background rejection and energy threshold 447
22.6 TPC neutron background rejection, solar neutrinos and radon 450
22.7 Electronic noise and other background 452
22.8 WIMP detection and directional sensitivity in practice 452
22.9 Head–tail recoil discrimination, theory and experiment 456
22.10 Experimental status and readout technology 457
22.11 Scale-up and a future WIMP telescope 463

23 Axion searches ***S. Asztalos*** 467
23.1 Constraints on axion properties 468
23.2 Conclusions 487

Table of Contents
More information

Part V Indirect detection and astrophysical constraints 489

24 Gamma-rays ***L. Bergström and G. Bertone*** 491
24.1 Annihilation 491
24.2 Decaying dark matter 496
24.3 Galactic centre 497
24.4 Substructures 499
24.5 The extragalactic signal 504
24.6 Connection between antimatter and gamma-ray signal 505

25 High-energy neutrinos from WIMP annihilations in the Sun ***F. Halzen and D. Hooper*** 507
25.1 Searching for dark matter with neutrinos 507
25.2 The capture and annihilation of WIMPs in the Sun 509
25.3 The neutrino spectrum 511
25.4 Neutrino telescopes 513
25.5 The case of neutralino dark matter 516
25.6 The case of Kaluza–Klein dark matter 518

26 Indirect dark matter detection with cosmic antimatter ***P. Salati, F. Donato and N. Fornengo*** 521
26.1 Production of antimatter in the Galaxy 521
26.2 Propagation of antinuclei in the Galaxy 521
26.3 Antiprotons in cosmic rays 524
26.4 Antideuterons in cosmic rays 532
26.5 Positrons in cosmic rays 537
26.6 Conclusions 546

27 Multi-wavelength studies ***S. Profumo and P. Ullio*** 547
27.1 Introduction 547
27.2 The multi-wavelength approach and galaxy clusters 556
27.3 The multi-wavelength approach and dwarf galaxies 559
27.4 The multi-wavelength approach and the Milky Way 561
27.5 Radio observations 563
27.6 Conclusions and overview 564

28 Particle dark matter and Big Bang nucleosynthesis ***K. Jedamzik and M. Pospelov*** 565
28.1 Introduction 565
28.2 Standard BBN theory 567
28.3 Observed light element abundances 569
28.4 Cascade nucleosynthesis from energy injection 573
28.5 Residual DM annihilation during BBN 576

Table of Contents
More information

28.6 Catalysed BBN (CBBN) 579
28.7 DM production during BBN: NLSP→LSP example 583

29 Dark matter and stars ***G. Bertone*** 586
29.1 DM capture and annihilation in stars 587
29.2 The Earth and other planets 589
29.3 Main-sequence stars 591
29.4 Compact objects 593
29.5 Pop III stars 599
