P-representation, 15, 16, 54, 217
Q-function, 17, 35, 39, 40, 52, 78, 83, 224, 225, 227, 235
q-plates, 154

absorption coefficient, 161, 165, 385, 386, 419, 427, 428
adiabatons, 419, 423, 426
Anderson localization, 432, 442–445
Anderson localization with nonclassical light, 443
anomalous dispersion, 307, 389, 414
anti Jaynes–Cummings interaction, 296, 297
antibunching, 186, 321, 323, 331, 332, 354, 452
antinormally ordered correlation function, 162
atom localization, 395, 396
atom–atom entanglement, 173, 338, 339
atom–photon entanglement, 173, 274, 296, 337–339
atomic cascade, 348
atomic coherence, 177, 215, 247, 249, 259, 337, 388, 415, 418, 419, 422, 478, 479
atomic coherent states, 242, 249–252, 290, 291
Autler–Townes splitting, 390, 478

balanced homodyne interferometers, 125
beam splitter as an attenuator, 111
beam splitter transformation, 105
Berry phase, 25
binomial distribution, 112, 218
bistability, 409, 459, 475
Bloch oscillations with single photons, 438, 440
Born and Markov approximations, 204
Bose–Einstein distribution, 13

cat paradox, 76
cat state, 40, 67, 68, 76, 79–81, 91, 101, 260, 263, 274, 274, 275, 290–293, 295, 296, 301, 383
Cauchy–Schwarz inequality, 54, 99, 183, 185, 334, 335
coherency matrix, 140
coherent Bloch oscillations, 436, 440, 441
coherent control, 385, 391, 392, 400, 404, 409, 414, 415, 417
coherent population oscillations, 313, 314
coherent population trapping, 394–396, 406
coherent states, 7, 8, 10–12, 14, 15, 22, 25, 28, 31, 39, 42, 46, 54, 67, 71, 72, 76, 79, 82, 83, 98, 106, 110, 127, 130, 132, 133, 141, 150, 180, 224, 236, 246, 249–252, 264, 265, 274, 290, 301
collapse and revival phenomena, 271
complementary space, 77, 78, 191
concurrence, 361, 362, 367, 368, 372, 381, 382
conditional measurements, 55
continuous time quantum walk, 438
coupled array of waveguides, 432
CPMG sequence, 376, 377, 382

dark state polariton, 419
dark states, 394, 423
decoherence, 208, 236, 244, 341, 370, 371, 373, 374, 376, 378, 380, 409
decoherence free subspace, 373
degree of polarization, 140, 141, 143
delay bandwidth product, 428
delay lines, 416
dephasing, 207, 209, 210, 215, 218, 235, 236, 239, 272, 370, 372–374, 378, 398
detailed balance, 206
Dicke states, 288, 343, 344, 352
Dicke superradiance, 345, 374
dielectric bump, 486
dipole blockade, 354, 365–368
dipole–dipole interaction in a dispersive cavity, 288
discrete quantum walks, 447
discrete quantum walks by waveguide couplers, 449
disentanglement, 370–373, 378, 380
dispersion management, 413, 417
dispersive JCM, 288, 290
dressed states, 246, 268–270, 277–279, 282, 283, 285, 286, 309, 312, 313, 320, 321, 390, 391, 410, 484, 485
dynamical back-action, 463
dynamical decoupling, 374

Einstein *A* coefficient, 162, 163, 172, 173, 349
Einstein *B* coefficient, 162, 166
EIT in single-atom fluorescence, 397
electromagnetically induced transparency, 300, 386–389, 391, 392, 397, 398, 403, 416, 423, 426, 430, 455, 475, 478–481

Index
More information

electromagnetically induced waveguides, 417
engineering of quantum states, 121
entangled states of the orbital angular momentum, 152, 153

Fano interference, 393
Fano line shapes, 393
feed forward, 126
fluctuations in Stokes parameters, 140, 144
Fock states, 5, 7, 8, 12, 13, 15, 19, 21, 25, 26, 28–32, 41, 42, 56, 76, 83, 90, 91, 94, 98, 113, 115, 143, 160, 161, 166, 186, 224, 229, 239, 271, 274, 277, 288, 297, 444, 446, 485
four-photon entanglement, 63, 65

ghost imaging, 194–197
GHZ state, 292, 295, 342, 378
Glauber–Sudarshan *P* function, 180
Gouy phase shifts, 148
group index, 414, 427–429
group velocity, 59, 413–415, 417, 428
gyroscopes, 416

Hadamard transformation, 245, 448, 453
Hall effect of light, 155
Heisenberg limited measurements, 131, 133, 293
Hermite–Gauss modes, 146–149
higher-order poles of S-matrix, 399
hole burning, 413
homodyne measurement, 6, 92, 126, 128, 129, 191
Hong–Ou–Mandel interference, 108, 109, 120, 121, 351, 434, 435

inhomogeneous broadening, 426
intensity interferometry, 184, 185, 187
interaction-free measurements, 117, 118
interferometry in spectral domain, 188

Jaynes–Cummings model, 267–269, 271, 273, 279, 283, 285
Jones matrix, 141, 142, 145, 154, 155

Kerr nonlinearities, 403

Laguerre–Gaussian modes, 146–152, 155
Lamb shift of the vacuum, 288
lifetime splitting, 468
logarithmic negativity, 57, 67, 100, 231
longitudinal relaxation, 207, 427
Lorentzian bath, 375, 376, 382
loss of nonclassicality, 223, 227, 228

Mach–Zehnder interferometer, 103, 113, 114, 116, 118–120, 122, 123, 130, 131, 135, 307, 416
Mandel Q_M parameter, 28, 32, 37, 45, 54, 79, 86, 87, 90, 99, 219, 229
Mandel's formula, 187
master equation, 200–206, 208, 210–212, 218, 221, 225, 233, 235, 275, 276, 283, 304, 358, 360, 362, 368, 370, 373, 374, 382, 383, 404, 406
Maxwell stress tensor, 455–457
minimum uncertainty relations, 46
minimum uncertainty states, 11, 46, 252
Mollow spectrum, 314, 319, 320, 324, 326
moment theorem, 181, 184, 194
multitime correlation functions, 211

nano mechanical system, 455
near field radiative effects, 354, 361–363, 365, 370
noise figure, 222, 223
non-Gaussian nonclassical states, 42, 76
nonclassical light, 103, 158, 193, 432, 443, 447
nonlinear generation, 389
NOON state, 58
normal dispersion, 307, 389, 414, 415, 427
normal-mode splitting, 466, 467, 469–471, 477
normally ordered correlation function, 161, 165, 179, 180, 316
normally ordered moments, 17, 112, 219, 233

Ohmic bath, 215, 217, 375, 377
open quantum systems, 200, 220
optical amplification, 220, 222
optical bistability, 455
optical Bloch equations, 304, 305, 308, 310, 317, 325, 326
optical parametric down conversion, 58, 61, 63
optical ratchet, 442, 443
orbital angular momentum, 49, 138, 146, 147, 149, 151, 153–155, 157, 344
orbital Stokes operators, 149, 150

pair-coherent states, 97–101
parametric amplification, 60, 232
Pauli master equation, 209, 210
Peres–Horodecki separability criterion, 56, 57
phase shifters, 103, 112, 448
phase velocity, 414
photon-added and subtracted states, 82, 83, 86–89
photon-added coherent state, 84–88, 101, 110
photon-added thermal state, 84–89, 101
photon blockade, 282, 283
photon bunching, 181, 185, 365
photon subtraction by a beam splitter, 91
photonic crystal, 174, 175, 371, 405
Poincaré sphere, 138, 139, 149–151
Poisson distribution, 8, 14
polarization, 2, 3, 49, 61, 63, 64, 67–69, 73, 138–144, 146, 149, 150, 153–156, 165, 166, 169, 170, 172–174, 193, 198, 215, 265, 306–308, 310, 311, 316, 325, 337–339, 344, 348, 350, 368, 372, 388, 413, 419, 449, 450, 452, 455, 486
polarizing beam splitter, 142, 143
population trapping, 176, 405

Index
More information

positivity of the density matrix, 45, 65, 210, 218
Purcell enhancement, 174

quadratures of the field, 6, 126, 191, 473, 477, 478
quantum entanglement, 49, 56, 58, 61, 67, 343, 344, 348, 365, 370, 405, 443, 449, 455
quantum eraser, 336
quantum interference, 108, 109, 135, 169, 170, 288, 328, 335, 345, 389, 390, 398, 432, 479
quantum Langevin equations, 212, 457, 459, 461, 462
quantum memory effects, 175
quantum state tomography, 128, 129, 372
quantum walk of two entangled photons, 450
quantum walk on a line, 447
quantum zeno effect, 135

radiation pressure, 455–458, 460, 463–465, 472, 475, 476, 480, 485, 486
radiative coupling between dipoles, 358
Raman gain, 169
Ramsey interferometer, 247, 256, 275
Routh–Hurwitz criterion, 462
Rydberg dipole blockade, 340, 341

Sagnac interferometer, 103, 115, 116
saturated absorption, 426
scattering of radiation, 158, 166
Schmidt form, 56, 100
Schwinger boson representation, 73
semiclassical dressed states, 246
sideband cooling, 463
single photon switch, 298–300, 402, 403
spatial bunching and antibunching, 330, 335
spatial coherence, 180, 181, 183, 184, 331
spectroscopic squeezing parameter, 258
spin squeezing, 252, 256, 265
spontaneous emission, 1, 60, 159, 162, 164, 169, 170, 174–177, 179, 200, 201, 268, 275, 278, 283, 284, 286, 299, 320, 337, 338, 356, 360, 373, 395, 400, 404–409
squeezed coherent state, 37, 38, 40, 46, 301
squeezed states, 7, 30, 31, 40, 47, 76, 110, 127, 151, 242, 252–254, 256, 452
squeezed thermal states, 44
squeezed vacuum, 31–34, 36, 37, 43, 45–47, 49–52, 55, 56, 58, 67, 74, 90–92, 95, 97–99, 101, 113, 121, 123, 129, 133, 135, 227, 230, 234, 239, 253, 300, 391, 423, 471–473, 475
squeezed vacuum noise, 471
squeezing parameter S, 29, 45
squeezing spectrum, 191
stimulated emission, 1, 163, 164, 167
stimulated Raman adiabatic passage, 338, 394
Stokes operator tomography, 144
Stokes operators, 139, 141, 144, 145, 155
Stokes parameters, 138–141, 143, 144, 150
storage and retrieval of optical pulses, 418, 419
structured vacuum, 174
SU(1,1) algebra, 73
sub-Poissonian, 37, 42, 79, 86–88, 90, 99, 193, 228, 229, 234, 283, 443, 444, 446
sub-Doppler line widths, 391
subnatural line widths, 391
Sudarshan's optical equivalence theorem, 17, 181
sudden death of entanglement, 372
super-Poissonian, 32, 444

Talbot effect, 452
teleportation of a quantum state, 67
thermal field, 15, 16, 19, 24, 29, 55, 84, 164, 181, 185, 186, 194–196, 284, 446
tight binding Hamiltonian, 432, 442
time correlation functions, 210, 211, 218
transverse relaxation time, 207, 305, 427
two-mode squeezed coherent states, 51
two-mode squeezed states, 49, 72
two-photon-induced transparency, 400
type-II phase matching, 63

ultraslow light, 413, 415, 416, 426, 427
unsaturated inhomogeneous absorption coefficient, 428
up-conversion of radiation, 455

vacuum field Rabi oscillation, 270
vacuum field Rabi splitting, 278, 287
vacuum-induced coherence, 404–407
vacuum-induced deterministic entanglement, 360
visibility of the fringes, 124, 184, 329
vortex structure, 93–95

W state, 341, 344, 440
waveguide couplers, 436, 447, 449–451
Weisskopf–Wigner theory, 170
Wheeler's delayed choice, 117
Wigner function, 18–21, 23–25, 28, 35, 36, 38, 39, 43, 44, 52, 65, 66, 68, 72, 76, 78–81, 84, 85, 90–92, 94, 101, 128, 129, 134, 224, 225, 227–230, 235–239, 258–263, 300, 452
Wigner function for the angular momentum, 259

Young's double slit interferometer, 103
Young's interference with microscopic slits, 328
Young's interferometer, 180–182, 184, 185, 191
