CAMBRIDGE LIBRARY COLLECTION

Books of enduring scholarly value

Art and Architecture

From the middle of the eighteenth century, with the growth of travel at home and abroad and the increase in leisure for the wealthier classes, the arts became the subject of more widespread appreciation and discussion. The rapid expansion of book and periodical publishing in this area both reflected and encouraged interest in art and art history among the wider reading public. This series throws light on the development of visual culture and aesthetics. It covers topics from the Grand Tour to the great exhibitions of the nineteenth century, and includes art criticism and biography.

First Additional Supplement to the Encyclopaedia of Cottage, Farm, and Villa Architecture and Furniture

After the success of his richly illustrated *Encyclopaedia of Cottage, Farm, and Villa Architecture and Furniture* (1833), which is also reissued in this series, the landscape gardener John Claudius Loudon (1783–1843) received a great deal of correspondence from interested readers. This prompted him and the *Encyclopaedia*'s contributors to publish this supplement in 1842. Loudon and his colleagues had continued to study a range of rural buildings – from homes to farms and schools – in England and Scotland, while at the same time receiving architectural designs and detailed letters from North America and Australia. The supplement draws on this wealth of material to discuss developments in the use of building materials as well as innovations in design. The focus is on cottages, farms, pubs, schools and almshouses. Construction methods and furnishings are also discussed. As with the volume it supplements, this work contains a plethora of detailed illustrations.

Cambridge University Press has long been a pioneer in the reissuing of out-of-print titles from its own backlist, producing digital reprints of books that are still sought after by scholars and students but could not be reprinted economically using traditional technology. The Cambridge Library Collection extends this activity to a wider range of books which are still of importance to researchers and professionals, either for the source material they contain, or as landmarks in the history of their academic discipline.

Drawing from the world-renowned collections in the Cambridge University Library and other partner libraries, and guided by the advice of experts in each subject area, Cambridge University Press is using state-of-the-art scanning machines in its own Printing House to capture the content of each book selected for inclusion. The files are processed to give a consistently clear, crisp image, and the books finished to the high quality standard for which the Press is recognised around the world. The latest print-on-demand technology ensures that the books will remain available indefinitely, and that orders for single or multiple copies can quickly be supplied.

The Cambridge Library Collection brings back to life books of enduring scholarly value (including out-of-copyright works originally issued by other publishers) across a wide range of disciplines in the humanities and social sciences and in science and technology.
