minister of education and, 435–438
allocation of, 452–456
outcome-prioritarian, 429–435
score-based social welfare function, 5, 56
Second-Order stochastic dominance (SOSD), 528–529, 562
Sen, Amartya, 14–15, 160
Separability axiom, 16
equality of opportunity and, 526–527
prioritarianism and, 5–6, 10–11
in social welfare functions, 64–66
inequality metrics, 100–102
leximin, 72–73
prioritarian, 18–19, 100–102
sufficientist, 72–73
utilitarianism and, 5–6, 11
Sher, George, 159–160
simulations, in fatality risk regulation, 338–344
mortality risks in, 339
social value of risk reduction, 338–343
single-period model
for fatality risk regulation
health variable in, 348–355
life expectancy increases and, 337
social welfare functions and, 324–328
for social value of risk reduction, 327
for well-being measures, 131
skill formation, in education systems, 426–435
dynamic model of, 426–428
technology of, 427
Social Choice and Individual Values (Arrow), 14–15
Social Cost of Carbon (SCC)
derivation of expressions for, 401
in Integrated Assessment Model, 363–364
prioritarian climate change policy and, 387–391
social planners, 485–486, 504–505
social progress. *See also* Russia; well-being measures
decomposition of, 209–212, 252–253
growth incidence curves
Atkinson social welfare function, 211–212
Kolm-Pollak social welfare function, 212
well-being distribution and, 210–212
inequality index
in decomposition of social progress, 209–210
well-being measures and, 213–214
social welfare and, 205–219
social welfare functions, 205–209
Atkinson, 208–209, 211–212
attribute bundles, 205–206
Kolm-Pollak, 209, 212
well-being distribution and, 207–208
theoretical approach to, 204–205
with gross domestic product per capita, 204
social value of risk reduction (SVRR)
extensions of main analysis, 348–349
in lifetime models, 330–338
in simulations, 338–343
in single-period model, 327
social welfare functions and, 324, 327–328
vaccine allocation strategies and, 613–615, 617–619, 622
social welfare, social progress and, 205–219
social welfare function (SWF), 2–3, 5. *See also* equivalence approach; generalized-utilitarian SWFs; prioritarian social welfare function; well-being measures; *specific axioms; specific functions*
anonymous, 41, 60
Arrow analysis of, 15
axioms in, 62–65
conceptual development of, 14–15
as decision procedure, 39

social welfare function (SWF) (cont.)
definition of, 15, 319
in economics approach, to prioritarianism, 14–15, 17–19
optimal tax theory and, 17
ethics and
impartiality and, 44–46
welfare consequentialism and, 43
fatality risk regulation and, 324–357
in lifetime model, 328–338
nonseparable SWF, 344–348
in single-period model, 324–328
social value of risk reduction, 324, 327–328
as framework, 42–62, 106–109
components of, 111–113
finite/fixed populations, 46–47, 60
generalized-Lorenz dominance, 60–62
integral representation in, 59–60
income-based, 18
individuals in, 42–48
populations of, 60
leximin, 5–7, 52–53
optimal taxation and, 173
separability axiom, 72–73
well-being levels, 55
maximin, 5, 55
optimal taxation and, 173
tax schedules and, 180
methodological approach to, 3, 40–42
nonseparable, 344–348
outcomes, 42–48
attribute bundles, 44–46
fixed population assumption, 47
for policy makers, 42–48, 113–115
in governmental institutions, 47–48
profile-independence of, 77
quantitative optimal taxation and, 177
rank weighted, 53, 56
score-based, 5, 56
sufficientist, 53, 56
separability axiom and, 72–73
types of, 52–57 (*See also specific types*)
uncertainty module in, 57–59, 113–115
decision theory, 57–58
multiplicity of, 58–59
policy separability and, 67, 70–71
state-of-nature format in, 58
uncertainty in, definition and scope of, 57–58
utilitarian, 5–7, 53
utilitarianism and, 5–7, 38–39, 75–80
variable populations and, 102–106
critical-level utilitarianism and, 105–107
finite populations, 46–47, 60, 102–103
fixed populations, 46–47, 60, 102–104
prioritarianism and, 106–107
utility independence, 105
welfare consequentialism and, 4–5
ethics and, 43
welfare-subjects, 45–46
welfarism theorem, 15, 50
SOSD. *See* Second-Order stochastic dominance
South Africa, equality of opportunity study in, 551–560
descriptive statistics for, 553, 565–566
empirical analysis of, 565–567
Generalized-Lorenz dominance, 556, 569
incomes, 555, 566
missing information, 565
National Income Dynamics Study, 551–552
partition into types, 554
by population share, 555
re-ranking of types, 569
sample sizes, 555
stakeholders, ethical preferences and, 485–486
streaming strategies, in education systems, 442
strong egalitarianism, 8
Strong monotonicity, 525–526
Strong Pareto axiom, 8–9
subjective well-being measures (SWB measures), 163–166
consistency assumption, 165–166
sublifetime well-being, 49–51
during COVID-19 pandemic, 576
sufficientism, 13–14
