Preface *page* xiii

1 Optimization in Process Systems Engineering 1

1.1 Introduction 1
1.2 Classification of Optimization Models 3
1.3 Outline of the Book 7

2 Solving Nonlinear Equations 9

2.1 Process Modeling Approaches 9
2.2 Newton's Method 9
2.3 Quasi-Newton Methods 11
Exercises 14

3 Basic Theoretical Concepts in Optimization 16

3.1 Basic Formulations 16
3.2 Nonlinear Programming Example 17
3.3 Basic Concepts 19
3.4 Optimality Conditions 21
3.4.1 Unconstrained Optimization 21
3.4.2 Constrained Optimization (Equalities) 22
3.4.3 Constrained Optimization (Inequalities) 24
3.4.4 Nonlinear Programming Problem 26
3.4.5 Active-Set Strategy Procedure for Determining a Karush–Kuhn–Tucker Point (Sargent, 1975) 27
Exercises 30

4 Nonlinear Programming Algorithms 32

4.1 Successive-Quadratic Programming 32
4.2 Reduced-Gradient Method 35
4.3 Interior-Point Method 38
4.4 Comparison of NLP Algorithms 40
4.5 Guidelines for Formulating NLP Models 40
Exercises 42

Table of Contents
More Information

5 Linear Programming 44

5.1 Basic Theory 44
5.2 Simplex Algorithm 47
5.3 Numerical Example 51
Exercises 52

6 Mixed-Integer Programming Models 53

6.1 Modeling with 0-1 Variables 53
6.1.1 Motivating Examples 53
6.1.2 Modeling with Linear 0-1 Variables y_j 55
6.1.3 Some Common IP Problems 57
Exercises 61

7 Systematic Modeling of Constraints with Logic 62

7.1 Modeling 0-1 Constraints with Propositional Logic 62
7.1.1 Example 1 of Logic Proposition 63
7.1.2 Example 2 of Logic Proposition 64
7.2 Modeling of Disjunctions 64
7.2.1 Big-M Reformulation 65
7.2.2 Convex-Hull Reformulation 65
7.2.3 Example 67
7.3 Generalized Disjunctive Programming 68
Exercises 69

8 Mixed-Integer Linear Programming 72

8.1 Introduction 72
8.2 MILP Methods 73
8.3 Gomory Cutting Planes 74
8.4 Branch and Cut Method 75
Exercises 79

9 Mixed-Integer Nonlinear Programming 81

9.1 Overview of Solution Methods 81
9.2 Derivation of Outer-Approximation and Generalized Benders Decomposition Methods 82
9.3 Extended Cutting-Plane Method 86
9.4 Properties and Extensions 87
Exercises 91

Table of Contents
More Information

10 Generalized Disjunctive Programming 93

10.1 Logic-Based Formulation for Discrete/Continuous Optimization 93
10.2 Relaxations and Reformulations of GDP 94
10.3 Special Purpose Methods for GDP 97
10.3.1 Disjunctive Branch and Bound 97
10.3.2 Logic-Based Outer Approximation 100
Exercises 102

11 Constraint Programming 103

11.1 Logic-Based Modeling 103
11.2 Search in Constraint Programming 105
11.2.1 Domain Reduction and Constraint Propagation 105
11.2.2 Tree Search 106
Exercises 108

12 Nonconvex Optimization 109

12.1 Major Approaches to Global Optimization 109
12.2 Convexification 110
12.3 Global Optimization of Bilinear Programs 111
12.4 Global Optimization of More General Functions 117
Exercises 117

13 Lagrangean Decomposition 119

13.1 Overview of Decomposition for Large-Scale Problems 119
13.2 Lagrangean Relaxation 120
13.3 Lagrangean Dual 121
13.4 Lagrangean Decomposition 124
13.5 Update of Lagrange Multipliers 126
Exercises 128

14 Stochastic Programming 129

14.1 Strategies for Optimization under Uncertainty 129
14.2 Linear Stochastic Programming 132
14.3 L-Shaped Method 134
14.4 Multistage Stochastic Programming 138
14.5 Robust Optimization 139
Exercises 141

More Information

15 Flexibility Analysis 142

15.1 Introduction 142
15.2 Two-Stage Programming with Guaranteed Feasibility 142
15.3 Flexibility Analysis 144
15.4 Flexibility Test with No Control Variables 145
15.5 Flexibility Test with Control Variables 147
15.6 Parametric Region of Feasible Operation and Vertex Search 149
15.7 Flexibility Index and Vertex Search 151
15.8 Theoretical Conditions for Vertex Solutions 153
15.9 Active-Set Strategy 156
Exercises 161

Appendix A Modeling Systems and Optimization Software 163
Appendix B Optimization Models for Process Systems Engineering 171
