<i>Preface</i>		xi
<i>List of notation</i>		xiv
1 Introduction and overview		1
1.1 Introduction		1
1.2 Overview of chapters 2–13		8
2 Basic properties of well-posed linear systems		28
2.1 Motivation		28
2.2 Definitions and basic properties		34
2.3 Basic examples of well-posed linear systems		46
2.4 Time discretization		55
2.5 The growth bound		60
2.6 Shift realizations		67
2.7 The Lax–Phillips scattering model		71
2.8 The Weiss notation		76
2.9 Comments		78
3 Strongly continuous semigroups		85
3.1 Norm continuous semigroups		85
3.2 The generator of a C_0 semigroup		87
3.3 The spectra of some generators		98
3.4 Which operators are generators?		106
3.5 The dual semigroup		113
3.6 The rigged spaces induced by the generator		122
3.7 Approximations of the semigroup		128
3.8 The nonhomogeneous Cauchy problem		133
3.9 Symbolic calculus and fractional powers		140
3.10 Analytic semigroups and sectorial operators		150

3.11	Spectrum determined growth	164
3.12	The Laplace transform and the frequency domain	169
3.13	Shift semigroups in the frequency domain	177
3.14	Invariant subspaces and spectral projections	180
3.15	Comments	191
4	The generators of a well-posed linear system	194
4.1	Introduction	194
4.2	The control operator	196
4.3	Differential representations of the state	202
4.4	The observation operator	213
4.5	The feedthrough operator	219
4.6	The transfer function and the system node	227
4.7	Operator nodes	238
4.8	Examples of generators	256
4.9	Diagonal and normal systems	260
4.10	Decompositions of systems	266
4.11	Comments	273
5	Compatible and regular systems	276
5.1	Compatible systems	276
5.2	Boundary control systems	284
5.3	Approximations of the identity in the state space	295
5.4	Extended observation operators	302
5.5	Extended observation/feedthrough operators	313
5.6	Regular systems	317
5.7	Examples of regular systems	325
5.8	Comments	329
6	Anti-causal, dual, and inverted systems	332
6.1	Anti-causal systems	332
6.2	The dual system	337
6.3	Flow-inversion	349
6.4	Time-inversion	368
6.5	Time-flow-inversion	378
6.6	Partial flow-inversion	386
6.7	Comments	400
7	Feedback	403
7.1	Static output feedback	403
7.2	Additional feedback connections	413
7.3	State feedback and output injection	422
7.4	The closed-loop generators	425

Contents

vii

7.5	Regularity of the closed-loop system	433
7.6	The dual of the closed-loop system	436
7.7	Examples	436
7.8	Comments	440
8	Stabilization and detection	443
8.1	Stability	443
8.2	Stabilizability and detectability	453
8.3	Coprime fractions and factorizations	465
8.4	Coprime stabilization and detection	473
8.5	Dynamic stabilization	485
8.6	Comments	502
9	Realizations	505
9.1	Minimal realizations	505
9.2	Pseudo-similarity of minimal realizations	511
9.3	Realizations based on factorizations of the Hankel operator	517
9.4	Exact controllability and observability	521
9.5	Normalized and balanced realizations	530
9.6	Resolvent tests for controllability and observability	538
9.7	Modal controllability and observability	546
9.8	Spectral minimality	549
9.9	Controllability and observability of transformed systems	551
9.10	Time domain tests and duality	554
9.11	Comments	565
10	Admissibility	569
10.1	Introduction to admissibility	569
10.2	Admissibility and duality	572
10.3	The Paley–Wiener theorem and H^∞	576
10.4	Controllability and observability gramians	583
10.5	Carleson measures	591
10.6	Admissible control and observation operators for diagonal and normal semigroups	598
10.7	Admissible control and observation operators for contraction semigroups	602
10.8	Admissibility results based on the Lax–Phillips model	610
10.9	Comments	613
11	Passive and conservative scattering systems	616
11.1	Passive systems	616
11.2	Energy preserving and conservative systems	628
11.3	Semi-lossless and lossless systems	636

11.4	Isometric and unitary dilations of contraction semigroups	643
11.5	Energy preserving and conservative extensions of passive systems	655
11.6	The universal model of a contraction semigroup	660
11.7	Conservative realizations	670
11.8	Energy preserving and passive realizations	677
11.9	The Spectrum of a conservative system	691
11.10	Comments	692
12	Discrete time systems	696
12.1	Discrete time systems	696
12.2	The internal linear fractional transform	703
12.3	The Cayley and Laguerre transforms	707
12.4	The reciprocal transform	719
12.5	Comments	728
	Appendix	730
A.1	Regulated functions	730
A.2	The positive square root and the polar decomposition	733
A.3	Convolutions	736
A.4	Inversion of block matrices	744
	<i>Bibliography</i>	750
	<i>Index</i>	767
