Mac Keith Press is a world leader in publications on child development and paediatric neurology. Started in the 1950s, the Press has gone from strength to strength, with its journal Developmental Medicine & Child Neurology, its main book series Clinics in Developmental Medicine and now as publisher of the International Review of Child Neurology. Put together, this is a comprehensive publishing resource for all health workers in the field.

Mac Keith Press is an independent subsidiary of Scope, the UK’s largest disability charity. Distribution, marketing and sales are handled worldwide by Cambridge University Press.

Developmental Medicine & Child Neurology
Developmental Medicine & Child Neurology is one of the world’s leading journals on paediatric neurology and covers a range of clinical topics concerning the diseases and neurological disabilities of children.

Clinics in Developmental Medicine
Clinics in Developmental Medicine are hardcover monographs which cover a wide range of conditions affecting child development. Each thematic volume provides a comprehensive study of the theoretical and clinical aspects of a specific childhood condition or disorder.

International Review of Child Neurology Series
International Review of Child Neurology Series (IRCN) are a series of annual monographs and professional reference texts, published on behalf of the International Child Neurology Association. Each volume in the series is devoted to the in-depth examination of a particular topic relevant to child neurology.

Developmental Medicine & Child Neurology
The officially designated journal of the American Academy for Cerebral Palsy and Developmental Medicine and the British Paediatric Neurology Association

An essential resource
Developmental Medicine & Child Neurology (DMCN) is one of the world’s leading journals on paediatric neurology, and one of the leaders in the whole field of paediatrics. In 2006 there will be twelve issues as usual, plus at least four supplements. DMCN covers a wide range of clinical topics concerning the neurological diseases and disabilities of children. The journal is of interest both to specialists engaged in medical research and to clinicians in the fields of paediatrics, genetics, orthopaedics, neurology and other relevant areas. It features original articles, case reports, reviews, letters to the editor, and book reviews.

Abstracted and indexed by

Clinics in Developmental Medicine

NEW AND FORTHCOMING VOLUMES

Shaking and Other Non-Accidental Head Injuries in Children
Edited by Robert Minns and Keith Brown
The Research Programme on Shaken Baby Syndrome in Edinburgh is internationally recognised for its research into the impact and effects of shaking a baby. In this book, a highly distinguished team of experts from the programme present their latest findings, covering diagnosis and the resulting long-term disability.
Clinics in Developmental Medicine (Mac Keith Press), 162
2006 240pp 80 illustrations
978 1 898 68335 3 (1 898 68335 2) £95.00

The Placenta and Neurodisability
Edited by Phillip Baker and Colin Sibley
This book shows how impaired placental function may contribute to deviant fetal growth and altered brain development by outlining the processes that lead to brain injury, and showing the extent to which such early effects on brain development lead to later disability.
Clinics in Developmental Medicine (Mac Keith Press), 169
2006 164pp 33 illustrations
978 1 898 68344 5 (1 898 68344 1) £45.00

The Management of Disorders of Bladder and Bowel Control in Children
Alexander von Gontard and Tryggve Néveus
An evidence-based overview of functional elimination disorders in children. It draws on the standardisation and terminology suggested by the International Children’s Continence Society. Short case vignettes, photos and line drawings, as well as questionnaires and charts are provided. To enable a quick orientation for clinical purposes, each chapter is followed by summaries, guidelines and diagrams.
Clinics in Developmental Medicine (Mac Keith Press), 170
2006 256pp 165 illustrations
978 1 898 68345 2 (1 898 68345 X) £65.00

Children with Hyperactivity
Understanding and Managing their Problems
Edited by Eric Taylor
Incorporates the latest research to provide a practical, comprehensive and evidence-based approach to clinical work with ADHD, hyperkinetic disorder and similar complex neurodevelopmental disabilities.
Clinics in Developmental Medicine (Mac Keith Press), 171
2006 288pp 185 illustrations
978 1 898 68346 9 (1 898 68346 8) £65.00

Developmental Medicine & Child Neurology is available online as part of the Cambridge Journals Online service and is now accessible FREE twelve months after initial publication.

The *Clinics in Developmental Medicine* are a well-established and highly regarded hardcover series which cover a wide range of conditions affecting child development. Each thematic volume provides a comprehensive study of the theoretical and clinical aspects of a specific childhood condition or disorder. Although the volumes offer primarily a practical approach to the understanding and management of these conditions, they also address their subject matter in depth and are of considerable research interest.

**Cognitive and Behavioural Disorders of Epileptic Origin in Children**
*Edited by Thierry Deonna and Eliane Roulet-Perez*
*Foreword by Jean Aicardi*

This book describes the effects that different kinds of childhood epilepsy can have on behavior and cognitive development. It is written for the various professionals dealing with such children (pediatricians, neurologists, psychologists) and gives a general view of the complex interrelation between medical psychological and educational problems in these children.

*Clinics in Developmental Medicine (Mac Keith Press), 168*
2006 256pp 72 illustrations
978 1 898 68343 8 (1 898683 43 3) £50.00

**Prechtl’s Method on the Qualitative Assessment of General Movements in Preterm, Term and Young Infants**
*Christa Einspieler, Heinz F. R. Prechtl, Andrew F. Bos, Fabrizio Ferrari and Giovanni Cioni*

A quick, non-invasive, non-intrusive and cost-effective method with high reliability and high validity is much in demand for the early detection of neurological anomalies which point to cerebral palsy and developmental deficits later on in life. Heinz Prechtl has devised such a method, a qualitative assessment of general movements (GMs) as a specific predictor for neurological impairments. His method is described in this book. A CD-ROM is included, giving 15 selected cases to demonstrate the different age-specific movement patterns.

*Clinics in Developmental Medicine (Mac Keith Press), 167*
2005 104pp 62 illustrations
978 1 898 68340 7 (1 898683 40 9) £30.00

**Central Nervous System Tumours of Childhood**
*Edward Estlin and Stephen Louis*

Ranging from epidemiology and neuroimaging through the general principles of surgery and radiotherapy/chemotherapy to issues of palliative care and quality of life, this concise, broad and practical text covers all clinical aspects of central nervous system tumours in children. It provides an overview of current important issues in diagnosis and management, and focuses on important areas of research, with an emphasis on the areas likely to impact on clinical practice. It will be essential reading for all professionals involved in the care of children with brain tumours.

*Clinics in Developmental Medicine (Mac Keith Press), 166*
2005 372pp 50 illustrations
978 1 898 68338 4 (1 898683 38 7) £70.00

**The Treatment of Gait Problems in Cerebral Palsy**
*Edited by James R. Gage*

James Gage and a range of experts who manage gait problems in cerebral palsy have combined to create this state-of-the-art resource. They examine the way the brain controls locomotion and the types of brain pathology with cerebral palsy. Current treatment modalities and treatments of specific gait problems are discussed in detail, including computerized gait analysis and methods of assessing the child and evaluating treatment outcomes. An attached CD-ROM gives pre- and post-treatment examples, illustrating the process of gait analysis.

*Clinics in Developmental Medicine (Mac Keith Press), 164/5*
2004 464pp 90 illustrations
978 1 898 68337 7 (1 898683 37 9) Hardback and CD-Rom £85.00

**Management of the Motor Disorders of Children with Cerebral Palsy**
*2nd edition*  
*Edited by David Scrutton, Diane Damiano and Margaret Mayston*

This entirely rewritten new edition, with two new editors from America and Australia, describes the most up-to-date thinking on the treatment of cerebral palsy. Coverage includes the types of cerebral palsy; assessment; goal-setting; learning and neural plasticity; mechanisms of deformity, its prevention and treatment, and the transition to adult life.

*Clinics in Developmental Medicine (Mac Keith Press), 161*
2004 214pp
978 1 898 68332 2 (1 898683 32 8) £50.00
