Clinical Intensive Care and Acute Medicine
Second edition

Ken Hillman
University of New South Wales, Sydney, Australia
and Gillian Bishop
Liverpool Health Services, Liverpool, Australia

This book focuses on areas common to all critically ill patients including fluid therapy, sedation, shock, infection and other central topics. This key understanding of basic pathophysiological principles provides an excellent launch pad for the section on individual disease entities encompassing haematology, gastroenterology, nephrology, endocrinology, the respiratory system, cardiovascular pathology, poisoning and neurology.

Economic and ethical issues are also covered, and the text is supported by numerous problem-oriented guidelines to help the care provider tackle real-life practical problems as encountered in the ICU. In the same spirit, wherever possible, the authors provide precise and meaningful advice, rather than bland generalisations.

Reviews of the first edition
‘Those of us who run intensive care units (ICU) are faced with trainees of varying experience whose first question on the unit is ‘What book should I buy?’. I can now tell them - this one. I recommend this text strongly for trainees in ICU. It will also prove useful for those preparing to take a fellowship examination. It is extremely good value.’

British Journal of Surgery
2004  706 pages  52 line diagrams  14 half-tones  128 tables
0 521 78980 X  Paperback  £49.95 / $80.00

Also available
