The Cambridge History of Science

VOLUME 5: THE MODERN PHYSICAL AND MATHEMATICAL SCIENCES

Edited by Mary Jo Nye. Oregon State University

A narrative and interpretive history of the physical and mathematical sciences from the early twentieth century to the dawn of the twenty-first century. Drawing upon the most recent methods and results in historical studies of science, the authors of over thirty chapters employ strategies from intellectual history, social history, and cultural studies to provide a running and comprehensive insights into developments in the public culture, discipline, organization, and cognitive content of the physical and mathematical sciences.

- Includes analysis of geosciences and environmental sciences, computer science, and biomedical science.
- Examines the interactions of the sciences with literature, religion, and art.

Contents

1. Introduction: the history of the sciences
2. The physical sciences
3. The life sciences
4. The social sciences
5. The human sciences
6. Mathematical sciences
7. The physical sciences in context
8. The physical sciences and the transition to modern science
9. The physical sciences in the modern world
10. The physical sciences and the future

The Cambridge History of Science

VOLUME 7: THE MODERN SOCIAL SCIENCES

Edited by Ted Porter. University of California, Los Angeles and Dorothy Ross. The Johns Hopkins University

This volume provides a history of the concepts, practices, institutions, and methods of the modern social sciences (including social and behavioral sciences) since the eighteenth century. It offers original, synthetic accounts of the historical development of social science, including its philosophical assumptions, its social and institutional organization, and its relations to science, medicine, politics, bureaucracy, philosophy, religion, and the professions. Its forty-two chapters include inquiries into the origins and traditions that formed social science, the careers of the main social disciplines. It also includes essays that examine the involvement of the social sciences in government, business, education, culture, and social policy.

- Traces the beginnings of social sciences such as psychology, economics, sociology, anthropology, political science, geography, and statistics.

International essays on social sciences in Eastern Europe, Asia, Africa, and Latin America

Contents

1. Introduction: the history of the social sciences
2. Anthropology
3. History
4. Psychology
5. Sociology
6. Geography
7. Economics

39. Psychiatry
40. Social science and social planning during the twentieth century
41. Social science and social planning during the twentieth century
42. Cultural history
The Cambridge History of Science

VOLUME 4: EIGHTEENTH-CENTURY SCIENCE

Edited by Roy Porter

This volume offers to general and specialist readers alike the fullest and most complete survey of the development of science in the eighteenth century, exploring the implications of the 'scientific revolution' of the previous century and the major new growth-points, particularly in the experimental sciences. While prime attention is paid to western science, space is also given to science in traditional cultures and colonial science. The coverage strikes a balance between analysis of the cognitive dimension of science itself and interpretation of its wider social, economic and cultural significance.

- The volume is distinct in being the first comprehensive survey of the history of eighteenth-century science produced during the last thirty years
- By far the fullest and most complete work of its kind
