Another Essential Textbook in this area from Cambridge

Reading the Past
Current Approaches to Interpretation in Archaeology
Third edition
Ian Hodder, Stanford University, California
and Scott Hutson, University of California, Berkeley

The third edition of this classic introduction to archaeological theory and method has been fully updated to address the burgeoning of theoretical debate throughout the discipline. Ian Hodder and Scott Hutson argue that archaeologists must bring to bear a variety of perspectives in the complex and uncertain task of constructing meaning from the past. While remaining centred on the importance of hermeneutics, agency and history, the authors explore cutting-edge developments in areas such as post-structuralism, neo-evolutionary theory and whole new branches of theory such as phenomenology. With the addition of two completely new chapters, the third edition of Reading the Past presents an authoritative, state-of-the-art analysis of contemporary archaeological theory. Also including new material on feminist archaeology, historical approaches such as cultural history, and theories of discourse and signs, this book represents essential reading for any student or scholar with an interest in the past.

• This study of the ancient Maya is unique in being a holistic, theoretically integrated vision of that society

• Data based on the author’s collaborations with the largest ongoing archaeology projects in Central America

Ancient Maya
The Rise and Fall of a Rainforest Civilization
Arthur Demarest, Vanderbilt University, Tennessee

By applying a holistic view to the most recent evidence from archaeology, Arthur Demarest brings the lost civilization of the Maya to life. His theoretical interpretation emphasises both the brilliant rainforest adaptations of the ancient Maya and the Native American spirituality that permeated all aspects of their daily life. Drawing on data from the largest ongoing archaeology projects in Central America, this new study will appeal to anyone interested in the ecological bases of civilization, the function of the state and the causes of the collapse of civilizations.
