An essential resource for those involved in trauma care

COLOR ATLAS OF EMERGENCY TRAUMA

Diku P. Mandavia
Edward J. Newton
Demetrios Demetriades

INTRODUCTORY OFFER – See inside for details

www.cambridge.org/medicine/emergencymedicine
Nearly 700 clinical, operative, and autopsy photographs; x-ray, ultrasound, magnetic resonance imaging, and angiography radiographs; and original illustrations depicting injury patterns will help guide clinicians in recognizing, prioritizing, and managing trauma patients by using the physical cues paramount to the emergency setting.

Organized by major body regions into separate chapters on the head, face, neck, chest, abdomen, musculoskeletal system, spine and soft tissue, the thorough text of this comprehensive atlas discusses management guidelines, emergency workup protocols, and common pitfalls.

**Principles and Practice of Emergency Neurology**
Handbook for Emergency Physicians

Edited by Sid M. Shah
Michigan State University, USA

and Kevin M. Kelly
School of Medicine, MCP Hahnemann University, Pittsburgh, USA

Presenting a readily accessible handbook of emergency neurology. With a symptom-based emphasis, the text, tables, algorithms, and illustrations guide the emergency physician in the diagnosis and management of common and complex neurological disorders. Integrating fundamental neurological concepts with the practical realities and demands of emergency care, this reference tool emphasizes brief neurological examination techniques and provides succinct, crucial information for all emergency physicians who diagnose and manage neurologic disorders such as headache, seizure, and spinal cord injury.

**Contents**

2003 350pp 140 illustrations
0 521 00980 4 Paperback £30.00 / $55.00
