

Subject Index

- A and E effects, 95–97
see also apparent vertical
- accommodation: as adaptive control system, 38
 and ciliary muscle, 35
 reflexive, 36
 resting level of, 37
 vergence stimulated, 43
 voluntary control of, 39
 and zonules, 35–36
see also CA/C ratio
see also hysteresis effects
- acuity: 20/20, 161
 and legal blindness, 161
- amblyopia, strabismic: and anomalous correspondence, 168
 and suppression scotomas, 168
- ametropia, 159
- apparent horizon, 88
 and gaze, 89–90
 in pitchroom, 88–90
 and pitchbox, 88–90
- apparent vertical: and apparent elevation, 94
 with backward pitch, 95–96
 in frontal plane, 97–101
 and ocular torsion, 98–101
see also A and E effects
- aqueous humor: and canal of Schlemm, 36
 and ciliary process, 36
 pressure of in glaucoma, 168
- Aristotle, and apparent visual direction, 118
- asthenopia, 170–171
- astigmatism, 166
 and aniseikonia, 166
- Aubert-Fleischl effect, 117
- axial length, 165
 distribution of, 165
 and refractive error, 165
 and x-rays, 165
- body tilt: in 1-g field, 100
 in centrifuge, 100
- CA/C ratio, 43
 adaptation of, 43
- chromatophores: and eye color, 40
- compensation theory, 125–129
 and exafference, 126
 and position constancy, 126–127
 and reafference, 126
 and voluntary innervation, 127–129
see also oculogyral illusion
- conscious states: as direct reality, 4–5
 in simulated brain, 6–7
- Coriolis maneuver: and cross coupled rotation, 152
 and nausea, 151
 and nystagmus, 150

202 Subject Index

- counterproof, 75
 and method of parametric variation, 75
 cyclopean eye, 79–80
- dark focus, *see* accommodation: resting level
- decussation, partial, 45
 and corresponding points, 45
- depth of focus, 14
- diopter: and convergence, 24
 prism, 22–24
 spherical, 14, 16
- diplopia, 41
- distance perception: and accommodation, 104–105
 manual measurement of, 102
 and natural geometry, 102–103
 and vergence resting level, 103–104
see also vergence, ocular
- doll reflex: *see* otolith-ocular reflexes
- ecological efference mediation: theory of, 137
- egocentric coordinates: γ , α , ϕ , 77–80
see also cyclopean eye
- egocentric direction: adaptation of, 80–82
 and apparent frontal plane, 86–88
 and eyeball loading, 84–85
 role in stroboscopic motion, 81
see also induced vertical phoria
see also otolith-ocular reflexes
- Einstein: and equivalence of g-force and linear acceleration, 67
- emergent dualism, 2
 and nonlinear interaction, 5
see also structure and function
- Emmert's law: and moon illusion, 106
see also size, perception of
- energy distributions, 4
 as physical reality, 4
 as provisional and indirect reality, 4–5
- extraocular muscles: and eye movements, 31–35
 paralysis of, 125
 vibration of, 121–123, 137, 142–143
 yoked, 32
see also Hering's law
see also muscle spindles
see also reciprocal innervation
- eye: reduced, 28
 schematic, 24–25
- eyeball loading: and eye press, 85, 135
 and increased outflow, 84
 manual, 84
- eye level gaze: in pitchbox, 89–90
 and pitchroom, 89–90
- eye movements, 31–35
 abduction, 32, 34
 adduction, 34
 extorsion, 33
 intorsion, 32
 rapid (REM), 29
 teleology of, 30–31, 76
 version, 30, 32
see also optokinetic reflex (OKR)
see also otolith-ocular reflexes
see also pursuit movement
see also saccades
see also vergence, ocular
see also vestibulo-ocular reflex (VOR)
- eye-press paradigm, 83–87, 134–136
- eye putty experiment: and empirical science, 125
see also compensation theory
- fixation disparity, 52
- Gauss, C.: and method of approximation, 25
- gaze: adaptation of, 82, 111–113
 stabilization of, 31, 109
 and visual position constancy, 110
- ghosts: as afterimages, 115
- Glaser, G.: *see* organizational invariance
- glaucoma, 167–169
see also aqueous humor
- Herings law, 32, 33
- heterophoria, lateral: and esophoria, 170
 measurement of, 169–170
- horopter, horizontal: as equi-convergence locus, 44
 and Aguilonius, F., 44
 and Vieth-Müller circle, 44
- hyperopia: and correction of, 162
 and insufficient refraction, 162

- hysteresis effects, 37
 and myopia, 37
- images: and apertures, 11–12
 induced movement of Duncker, 121
 induced vertical phoria, 91–93
 and apparent height, 91–93
 inflow, 77
 and outflow, 77
 interocular axis, 46
 stretching of, 46
- Kepler, Johannes: and internal ocular refraction, 10
- lateral geniculate, 45
- lens: as insentient tissue, 10
 negative, 20
 positive, 18, 19
- light and dark environments: oculomotor factors in, 130–137
- Listing's plane, 98
- mind-brain problem, 157
 and locus problem, 158
 and modalities problem, 158
 and perceptual-perceptual interactions, 157
see also emergent dualism
- monovision, 166
- motion sickness, 143–146
 and eye muscle traction, 148–153
 and gyroscopic angular acceleration, 151
 and neurotoxin-mimetic theory, 146–147
 and parabolic flight, 70
 and positional alcohol nystagmus (PAN), 147–148
 and eye muscle relaxation-stimulation dyschronicity, 55, 152–153
see also vagus nerve
- muscle spindles: in extraocular muscle, 129
 and sentience, 157
 vibration of, 60, 121–123, 137, 142–143
see also ocular sentience
- myopia: and accommodative hysteresis, 37
 and axial elongation, 164–165
 correction of, 161
 and excessive refraction, 160–161
 and near work, 164
- near reflex, 40, 48
- nodal points, 26
- nystagmus, 30
 and alcohol, 147–148
 and Coriolis maneuver, 150
 and heavy water, 147–148
- ocular sentience: absence of in VOR and OKN, 125, 128
 loss of in sustained postures, 48, 156
 and steady states, 127–128
 and voluntary eye movements, 157
- oculocardiac reflex, 149
- oculogyral illusion (OGI), 130
- oculomotor systems: perceptual properties of, 76
 types of stimulation for, 74
- optokinetic afternystagmus (OKAN): and eye position signal, 99
 as velocity storage, 65
- optokinetic nystagmus (OKN):
see optokinetic reflex (OKR)
- optokinetic reflex (OKR), 57–58
 as look up table, 64
 and nystagmus, 30
 and pursuit suppression of 120, 127, 141–142
 and stare-nystagmus, 58
 in synergism with VOR, 61
 and vection, 58
see also traveling-moon illusion
see also vestibulo-ocular reflex (VOR)
- optostatic reflex, 133, 138
- Organizational Invariance, 6
see also structure and function
- otolith-ocular reflexes: adaptation of, 72–73, 90–91
 counterrolling, 68–70
 doll-reflex, 70–72, 90–92, 95–96
 in free fall, 72–73
see also otolith organs
- otolith organs: and linear acceleration, 66–69
 morphological polarization of maculae, 68
see also otolith-ocular reflexes

204 Subject Index

- owl: eyeball mobility, 8
- parabolic flight, 70
- paralysed eye paradigm, 131–134
- past pointing, 125
- perception: attributional approach to, 9, 30, 76
 and common stimulation, 3–4
 and consciousness, 2
 context for, 1
 and motor systems, 7–9
 of publicly observable attributes, 2
- perceptual integration: and complementarity of function, 156
 problem of, 155
 and redundancy 138, 155–156
- presbyopia, 36, 164
- principal planes (Hauptebene), 26
 in relation to focal (F) and nodal (N) points, 27
- proprioception: by extrapolation, 121
 and impossible apparent limb positions, 60
- pupil: artificial, 13
 and ciliary muscle, 34, 36, 39–41
 and constrictor muscle, 40
 and dilator muscle, 40
 and f-stop range, 40
 and image formation, 12
 and iris, 34
see also depth of focus
see also near reflex
- pursuit movement: characteristics of, 58–59
 path length of, 115–118
 perceptual and proprioceptive stimuli for, 60
 and stabilized images, 116–117
- reasoning, analogical, 21
 limitations of, 22
 and Snell's law for vehicles, 21
- reciprocal innervation: Sherrington's law of, 34
- refraction, 20
 in prisms, 23
 Snell's law of, 20, 21
- refractive errors: and axial length, 164–165
 distribution of, 163
- retinal excitation: by x-ray, 165
- retrobulbar block: and apparent scene displacement, 133
 and nausea reduction, 149
- saccades: adaptation of, 56
 and aniseikonia, 166
 and apparent after image movement, 119
 pulse and step signals, 53–56
 and saccadic suppression, 51, 53
see also eye movements
- semicircular canals: and cupula, 63
 push-pull pairs, 62, 63
- Sherrington's law: *see* reciprocal innervation
- size, perception of: and moon illusion, 106
 and optical distance, 109
 relational factors and cognition in, 107–108
 and size constancy, 105–106
see also distance perception
see also Emmert's law
- sopite syndrome, 145
see also motion sickness
- stereopsis: and binocular disparity (η), 41, 46
 and horopter, 44
- stroboscopic movement: and change in egocentric direction, 81
see also egocentric direction
- structure and function, 6
 brain as mind machine, 6
 principle of organizational invariance, 6
- torsion, ocular, 34
see also apparent vertical
see also Listing's plane
- traveling-moon illusion, 120
 and OKR suppression, 120
see also induced movement of Duncker
- vagus nerve: and eye muscle traction, 148–153
see also motion sickness
- vection, 138–143
 and antivection, 141
 apparatus, 139, 144
 circular, 144
 and eye muscle vibration, 142–143

- mechanistic and cognitive approaches to, 140–142
- and pursuit suppression of OKR, 138–143
- and single vs. multiple condition experiments, 140
- vergence, light, 12–13
 - and aperture size, 14
 - and distance, 13–14
 - measure of, 13
 - negative, 12
 - positive, 18
 - and refraction, 13–14
 - see also* depth of focus
 - see also* diopter, spherical
 - see also* wavefront curvature
- vergence, ocular: by prisms, 24
 - adaptation of, 51
 - and disjunctive eye movements, 41
 - geometry of, 42
 - resting level of, 48–50
 - use in scaling disparity and image size, 108–109
 - voluntary, 45, 48
 - see also* diopter, prism
 - see also* distance perception
 - see also* fixation disparity
 - see also* heterophoria
 - see also* vestibulo-ocular reflex (VOR)
- vestibulo-ocular reflex (VOR): adaptation of, 61, 64, 111–112
 - and apparent self rotation, 111
 - control system for, 65
 - elimination of, 110
 - and gaze instability, 112–114
 - and gaze stabilization, 59, 61
 - and nystagmus, 30
 - and pursuit suppression of, 127, 130
 - and relation to OKR and pursuit, 61–65
 - and role of visual feedback in adaptation, 65–66
 - and thermal stimulation, 110–111
 - vergence input to, 67
- virtual reality: as nonveridical experience, 5
 - and senses as sensors, 5
- visual parameters: far point, 50
 - near point, 50
 - resting focus, 50
 - resting vergence, 50
- VOR, *see* vestibulo-ocular reflex
- wavefront curvature, 15–17
 - as rate of change, 16
 - see also* diopter, spherical
 - see also* vergence, light
- Zuckerman's law: and apparent depth, 108–109
