

Contents

<i>Preface</i>	page vii
1 What is logic?	1
2 Validity and soundness	9
3 Patterns of inference	18
4 The counterexample technique	29
5 Proofs	36
6 Validity and arguments	44
<i>Interlude</i> Logic, formal and informal	51
7 Three propositional connectives	53
8 The syntax of PL	63
9 The semantics of PL	72
10 'A's and 'B's, 'P's and 'Q's	82
11 Truth functions	88
12 Tautologies	101
13 Tautological entailment	107
<i>Interlude</i> Propositional logic	123
14 PLC and the material conditional	125
15 More on the material conditional	137
16 Introducing PL trees	145
17 Rules for PL trees	157
18 PLC trees	171
19 PL trees vindicated	179
20 Trees and proofs	185
<i>Interlude</i> After propositional logic	192
21 Quantifiers	194
22 QL introduced	202
23 QL explored	210
24 More QL translations	219
25 Introducing QL trees	228

vi	<i>Contents</i>	
26	The syntax of QL	242
27	Q-valuations	250
28	Q-validity	262
29	More on QL trees	272
30	QL trees vindicated	286
	<i>Interlude</i> Developing predicate logic	294
31	Extensionality	296
32	Identity	303
33	The language QL ⁼	309
34	Descriptions and existence	316
35	Trees for identity	325
36	Functions	339
	<i>Further reading</i>	348
	<i>Index</i>	352
