

Contents

	<i>Preface</i>	xiii
1	Introduction	1
1.1	Chaos: a physical example	6
1.2	The transition to chaos	13
1.3	Determinism and predictability	20
1.4	Chaos and quantum mechanics	25
2	Chaos: tools and concepts	29
2.1	The number continuum	31
2.2	Mappings	36
2.3	Fractals	51
2.4	Symbolic dynamics	60
3	Chaos in classical mechanics	64
3.1	Lagrangian and Hamiltonian Mechanics	64
3.2	The double pendulum	73
3.3	Integrability versus chaos	79
4	Chaos in quantum mechanics	83
4.1	Quantized chaos	85
4.1.1	Random matrix theory	86
4.1.2	Level dynamics	98
4.1.3	The trace formula	101
4.2	Semi-quantum chaos	106
4.3	Quantum chaos	112
5	The kicked rotor: paradigm of chaos	117
5.1	The classical kicked rotor	119
5.2	Chirikov's overlap criterion	127

x	<i>Contents</i>	
5.3	The quantum kicked rotor	130
5.4	The kicked molecule	137
5.5	Symmetry and localization	146
6	Microwave-driven surface state electrons	150
6.1	The SSE model	151
6.2	Quantum dynamics: technical tools	164
6.2.1	Sturmian method	164
6.2.2	Fredholm approach	167
6.2.3	Analytical decay rates	170
6.3	The multi-photon regime	174
6.4	The chaotic regime	177
7	The hydrogen atom in a strong microwave field	181
7.1	Experiment	183
7.2	Quantum calculations	187
7.3	Ionization thresholds as chaos thresholds	191
7.4	High frequency localization of chaos	195
7.5	Bichromatic drive: prediction of a “giant resonance”	196
8	The kicked hydrogen atom	203
8.1	The model	206
8.2	Phase-space fractal and powerlaw decay	211
8.3	Absence of elliptic points	214
9	Chaotic scattering with CsI molecules	216
9.1	The CsI scattering system	221
9.2	Classical chaotic scattering	223
9.3	Quantum chaotic scattering	230
9.4	Ericson fluctuations	234
10	The helium atom	240
10.1	Brief history of the helium problem	242
10.2	The one-dimensional model	245
10.3	Classical dynamics	248
10.3.1	Periodic orbits	250
10.3.2	Helium: a chaotic scattering system	252
10.4	Quantum analysis	255
10.4.1	Complex rotation	256
10.4.2	The helium spectrum: an empirical formula	260
10.4.3	Periodic orbits and scaled energy spectroscopy	263
10.5	Quantum signatures of chaos	271
10.5.1	The Ericson regime	277

<i>Contents</i>		xi
10.5.2	Resonance dynamics	279
11	Chaos in atomic physics: state of the art and research directions	284
11.1	Quantum chaology	284
11.2	Type II quantum chaos	287
11.3	Microwave ionization	288
11.4	Hydrogen in a strong magnetic field	290
11.5	The helium atom	293
