

# Contents

<b>Preface</b>	<b>xi</b>
<b>1 The Key Idea</b>	<b>1</b>
<b>2 Approaches to Parallel Software Development</b>	<b>3</b>
2.1 What's Good About Parallelism . . . . .	4
2.2 What's Bad About Parallelism . . . . .	5
2.3 The State of the Art in Parallel Computing . . . . .	6
2.4 Models and their Properties . . . . .	8
2.5 Categorical Data Types . . . . .	11
2.6 Outline . . . . .	14
<b>3 Architectural Background</b>	<b>15</b>
3.1 Parallel Architectures . . . . .	15
3.2 The Standard Model . . . . .	18
3.3 Emulating Parallel Computations . . . . .	20
3.3.1 Emulating on Shared-Memory MIMD Architectures . . . . .	21
3.3.2 Emulating on Distributed-Memory MIMD Architectures . . . . .	22
3.3.3 Emulating on Constant-Valence MIMD Architectures . . . . .	23
3.3.4 Emulating on SIMD Architectures . . . . .	24
3.4 Implications for Models . . . . .	25
<b>4 Models and Their Properties</b>	<b>27</b>
4.1 Overview of Models . . . . .	28
4.1.1 Arbitrary Computation Structure Models . . . . .	29
4.1.2 Restricted Computation Structure Models . . . . .	39
4.2 Implications for Model Design . . . . .	45
<b>5 The Categorical Data Type of Lists</b>	<b>49</b>
5.1 Categorical Preliminaries . . . . .	49
5.2 Data Type Construction . . . . .	50
5.3 T-Algebras . . . . .	52
5.4 Polymorphism . . . . .	57
5.5 Summary of Data Type Construction . . . . .	58
5.6 Practical Implications . . . . .	59

5.7	CDTs and Model Properties . . . . .	61
5.8	Other List Languages . . . . .	64
5.9	Connections to Crystal . . . . .	65
<b>6</b>	<b>Software Development Using Lists</b>	<b>67</b>
6.1	An Integrated Software Development Methodology . . . . .	67
6.2	Examples of Development by Transformation . . . . .	70
6.3	Almost-Homomorphisms . . . . .	72
<b>7</b>	<b>Other Operations on Lists</b>	<b>75</b>
7.1	Computing Recurrences . . . . .	75
7.2	Permutations . . . . .	79
7.3	Examples of CLO Programs . . . . .	81
7.3.1	List Reversal and FFT . . . . .	81
7.3.2	Shuffle and Reverse Shuffle . . . . .	82
7.3.3	Even-Odd and Odd-Even Split . . . . .	83
7.4	CLO Properties . . . . .	83
7.5	Sorting . . . . .	85
7.5.1	The Strategy and Initial CLO Program . . . . .	85
7.5.2	The Improved Version . . . . .	87
<b>8</b>	<b>A Cost Calculus for Lists</b>	<b>89</b>
8.1	Cost Systems and Their Properties . . . . .	89
8.2	A Strategy for a Parallel Cost Calculus . . . . .	91
8.3	Implementations for Basic Operations . . . . .	94
8.4	More Complex Operations . . . . .	98
8.5	Using Costs with Equations . . . . .	105
8.6	Handling Sizes Explicitly . . . . .	112
<b>9</b>	<b>Building Categorical Data Types</b>	<b>115</b>
9.1	Categorical Data Type Construction . . . . .	115
9.2	Type Functors . . . . .	117
9.3	T-Algebras and Constructors . . . . .	118
9.4	Polymorphism . . . . .	122
9.5	Factorisation . . . . .	125
9.6	Relationships between T-Algebras . . . . .	126
<b>10</b>	<b>Lists, Bags, and Finite Sets</b>	<b>129</b>
10.1	Lists . . . . .	129
10.2	Bags . . . . .	131
10.3	Finite Sets . . . . .	133
<b>11</b>	<b>Trees</b>	<b>135</b>
11.1	Building Trees . . . . .	135
11.2	Accumulations . . . . .	137
11.3	Computing Tree Catamorphisms . . . . .	141

<i>Contents</i>	vii
<hr/>	
11.4 Modelling Structured Text by Trees . . . . .	143
11.4.1 Global Properties of Documents . . . . .	144
11.4.2 Search Problems . . . . .	146
11.4.3 Accumulations and Information Transfer . . . . .	148
11.4.4 Queries on Structured Text . . . . .	148
<b>12 Arrays</b>	<b>151</b>
12.1 Overview of Arrays . . . . .	152
12.2 Sequences and Their Properties . . . . .	153
12.3 Flat Array Construction . . . . .	155
12.4 Evaluation of Flat Array Catamorphisms . . . . .	157
12.5 Nested Arrays . . . . .	158
12.6 Evaluation of Nested Array Catamorphisms . . . . .	161
<b>13 Graphs</b>	<b>163</b>
13.1 Building Graphs . . . . .	163
13.2 Evaluation of Graph Catamorphisms . . . . .	166
13.3 More Complex Catamorphisms . . . . .	167
13.4 Construction of Other Graphs . . . . .	168
13.5 Molecules . . . . .	169
<b>14 Conclusions</b>	<b>171</b>
<b>A C++ Library for Lists</b>	<b>173</b>
<b>B Historical Background</b>	<b>177</b>
<b>Index</b>	<b>194</b>
