 - first term, 156
 - for cylinders, 296

- Debye, expansion (*cont.*)
 higher-order terms, 218
 of fields, 265
 of scattering amplitudes, 153
 second term, 161
 third term, 167
 potentials, 84
 deflection angle, 6
 deflection function, 10
 density matrix, 78
 dielectric function, 21, 106
 diffraction, 19
 as tunneling, 243
 classical theory, 30–34, 40
 high-angle, 59
 dispersion relations, 21, 103–106
 with subtractions, 104
- edge corrections, 191, 194
 edge domain, 57, 125, 149, 212
 edge effects, 42, 57
 edge rays, 60, 221, 228, 262–263
 effective potential, 5, 8, 213, 241
 efficiency, defined, 49, 90
 eikonal equation, 13, 40
 evanescent waves, 276
 extended boundary condition method, 299
 extinction, 64
 efficiency, 90, 188–190
 paradox, 39, 80, 90
 sum rule, 106
- Fabry–Pérot interferometer, 144
 focal line, 182, 211
 Fock functions, 139, 161, 167
 Fock transition region, 41
 forward diffraction peak, 34
 frequency splitting, 266
 Fresnel coefficients, 14–16, 159
 complementary angles, 122
- gain, 97
 Gaussian beams, 279
 geometric optics, 12–19, 119–132
 and internal fields, 263
 failure of, 132
 geometric resonance, 220
 glare spots, 299
 glory, 200
 asymptotic theory, 215
 atomic, 232
 forward, 227–230
 nuclear, 232
 polarization of, 225
 theory of, 211
 van de Hulst's conjecture for, 213
 glory rays, 211
 conditions for 218–219
 glory scattering, 11, 231
 Goos–Hänchen shift, 291
 Green's function, free-space, 30
- Heiligenschein, 195, 200
 helicity, 68
 Helmholtz equation, 19, 66
 Hertz vectors, 84
- impact parameter, 5
 partial, 29
 impenetrable sphere, 8, 23, 28, 49–62
 inner representation, 56
 outer representation, 56
 index of refraction, 13, 21, 65
 relative, 86
 intensity, 81, 94
 backscattered, 215
 in geometrical optics, 131
 irradiance, 81
- Kirchhoff diffraction theory, 30
 Kramers–Kronig relations, 21, 106
- Langer modification, 37, 59
 light rays, 13, 127–132
 lineshape
 Breit–Wigner, 241
 Lorentzian, 241, 256
 localization principle, 29, 61
 Lorentz–Lorenz formula, 108
- Maxwell's equations, 12, 64
 Mie scattering, 83–89
 minimum deviation, angle of, 18, 198
 Mueller matrix, 74
 multiple scattering, 76
 multipole expansions, 65–67
- near-critical scattering, 289
 nonsense channels, 133
 nonspherical particles
 perturbation theory for, 297
 scattering from, 295
 normalized phase function, 97
 for backscattering, 97, 217
- optical equivalence, principle of, 73
 optical length, 11
 optical path, 12
 optical theorem, 26, 83
 and Gaussian beams, 80
 electromagnetic, 80
 orbiting, 10
 order-of-scattering technique, 287
- partial-wave coefficients, 87, 147
 properties of, 100–102
 partial-wave expansions, 23, 67, 69, 285
 penumbra, 41, 42
 penumbra parameter, 41
 phase shifts, 26, 100
 at a resonance, 239
 complex, 27
 of central light ray, 110
 upon reflection, 137, 159
 WKB approximation, 38

- plane waves, 23, 67
 partial-wave expansion, 23, 69
 plasma modes, excitation of, 274
 Poisson bright spot, 41
 Poisson's sum formula, 38
 polarization, 68
 circular, 68
 degree of, 77, 82
 elliptical, 68
 linear, 68
 polarization ellipse, 75
 polarization vectors, 68
 potential pocket, 242
- Q* factor, 251
 quasibound states of light, 245
 quasiperiodicities, 215, 227
- radiation pressure, 98
 asymptotic expression, 193–195
 in geometric optics, 125
 rainbow, 196
 Airy's theory, 202–205
 asymptotic theory, 205
 atomic, 231
 Descartes' theory, 198
 general theory, 201
 nuclear, 231
 polarization, 109
 rainbow angle, 10, 130, 197
 rainbows, higher order, 131, 208, 221
 rainbow integral, 203
 rainbow scattering, 230
 Raman scattering, 266
 Rayleigh–Gans theory, 111
 Rayleigh scattering, 107–110
 reduced masses, 5
 reflection
 direct, 127, 156
 internal, 17
 law of, 14, 16
 reflection coefficient, spherical, 144–147
 reflectivity, 15
 refractive index, *see* index of refraction
 Regge–Debye poles, 154
 Regge-pole dominance, 182
 Regge poles, 47, 135
 for a perfectly conducting sphere, 135
 for a transparent sphere, 142, 236, 245–250
 Regge trajectories, 47, 245
 family number of, 245
 resonance, 236–241
 and evanescent waves, 278
 coupling, 256
 density of, 253
 geometric, 220
 in coated spheres, 274
 in inhomogeneous spheres, 274
 lifetime, 244
 locations, 254
 morphology dependent, 243
 optical, 112
 orbital, 243
 order number, 243
 properties of, 251–258
 shape, 243
 widths, 255
 resonance penetration, 242
 Riemann–Lebesgue lemma, 338
 ripple, 92, 223
 origins of, 234
- S*-matrix, 26
s-wave scattering, 28
 saddle-point method, *see* steepest descents
 saddle points, 32, 340–341
 complex, 170
 connection to geometric optics, 32, 39
 overlapping, 170, 344
 range of, 344
 scattering
 acoustic, 62, 299
 elastic, 3
 glory, 11
 multiple, 76
 near-critical, 289
 rainbow, 10
 shadow, 56
 spiral, 10
 two-body, 3
 scattering amplitude, 25, 72
 imaginary part, 106
 partial, 25
 partial-wave expansion, 25, 88
 real part, 23
 symmetry relations, 105
 scattering-amplitude matrix, 73
 circular representation, 82
 scattering angle, 3, 32, 71
 scattering efficiency, 49, 93
 in geometric optics, 124
 scattering matrix, 74
 scattering plane, 71
 scattering singularities, 10–11
 semiclassical
 approximations, 34
 domain, 2, 34
 potential analysis, 241
 shadow, 8, 30, 41
 boundary, 41, 127–131
 shadow scattering, 56
 shape resonances, 243
 size parameter, 24, 86
 Snell's law, 14, 16
 sonoluminescence, 292
 source function, 94, 260
 spheres
 acoustically soft, 24
 anisotropic, 271
 coated, 268
 concentric, 269
 dielectric, 141

370

*Subject index*spheres (*cont.*)

eccentrically stratified, 272
 impenetrable, 8, 23, 28, 49–62
 inhomogeneous, 268
 interacting, 285
 large, perfectly conducting, 134–140
 small, dielectric, 107
 magnetic, 114
 perfectly conducting, 112
 multiple, 287
 nonuniform, 270
 proximate, 283
 transparent, 8, 43
 spheroids, scattering from, 296
 stationary phase, 32, 39, 338
 steepest descents method, 32, 54, 339–346
 Stokes emission, 266
 Stokes parameters, 73, 76
 Stokes phenomenon, 334
 sum rule, for extinction, 106
 supernumerary arcs, 197, 204
 peaks of, 206

surface curvature effects, 42–43
 surface waves, 54, 155, 159, 175, 214
 angular, 54
 damping, 54–55

T-matrix, 298
 terminator, 31
 time delay, 238, 258
 Titchmarsh's theorem, 103
 toroidal wavefront, 212
 transfer matrix, 74, 82
 transition matrix, 298
 transmission, direct, 128, 161
 transmission coefficient
 spherical, 144–147
 WKB, 36

Watson transformation, 45–48
 modified

Watson's lemma, 335
 whispering gallery modes, 260, 262, 264
 WKB method, 35–38
