

## Index

- absorption effects, 246
- all-order methods, 71, 73, 75, 76
- anapole moment, 68, 86
- angular momentum transfer
  - analysis, 169
- anticommutation relations, 45
- argon
  - double photoionization cross section, 158, 159, 165
  - electron scattering, 281
    - elastic cross section, 197
    - phase shifts, 196
  - photoelectron angular distribution, 180
  - triply differential cross section, 221
- atomic polarization, 245
- atomic structure, vii, 1
- B-splines, 55, 127, 131
- barium, photoionization cross section, 120
- beryllium
  - correlation energy, 7
  - photoionization cross section, 144
- beryllium-like  $C^{2+}$ , photoionization cross section, 147
- Bethe ridge, 217
- Bloch equation, 8, 19
- Bloch operator, *R*-matrix theory, 307
- Breit interaction, 13, 48, 84
- Bremsstrahlung, 210
- Brillouin-Wigner perturbation theory, 14
- Brillouin-Wigner resolvent, 16
- Brueckner orbitals, 72, 73, 82
- cadmium
  - electron scattering, 246
- calcium
  - electron scattering elastic cross section, 198
- carbon,  $C^{2+}$ , beryllium-like,
  - photoionization cross section, 367
- carbon,  $C^{3+}$ , lithium-like,
  - dielectronic capture, ionization, 367
- cesium
  - dipole matrix elements, 73
  - electron scattering, 346
  - energies, 70, 75
  - hyperfine constants, 76
  - hyperfine splitting, 73
  - photoelectron angular distribution, 177
- chlorine, photoelectron angular distribution, 176, 178
- close-coupling calculations
  - electron scattering, 253
  - photoionization, 114
- collision strength, 311
- Cooper-Zare formula, 173
- copper-like ions, energies, 58, 63
- coupled-cluster approach, 75
- coupled-cluster theory, 10, 37

- dielectric constant, 295
- dipole matrix elements
  - length, 134, 153
  - velocity, 134, 153
- dipole moment, 70
  - length gauge, 97
  - parity nonconserving, 68
  - velocity gauge, 97
- Dirac equation, 40
- Dirac Hamiltonian, 13
- Dirac matrices, 41
- distorted waves, 238
- distorting potentials, 240
- Dyson equation, 191
  
- effective charge, 269
- electron impact ionization
  - argon (+3), 278
  - asymptotic boundary conditions, 263
  - doubly differential cross section, 274
  - helium atom (+2), 280
  - helium atom (+3), 276
  - hydrogen atom (+2), 280
  - hydrogen atom (+5), 275
  - krypton (+3), 278
  - lithium atom (+2), 280
  - many-body perturbation
    - expansion, 268
  - near threshold (+26), 261
  - neon (+3), 278
  - partial wave expansion (+3), 265
  - target dependence (+26), 261
  - threshold behavior, 285
  - threshold law (+1), 261
  - triple differential cross section (+26), 261
  - Wannier-Peterkop-Rau (WPR) theory, 277, 279
  - Wannier-Peterkop-Rau (WPR) theory (+1), 284
  - xenon (+3), 278
- electron scattering, 213, 237, 261, 305, 325, 350, 359
  - autoionization, 349
  - close-coupling calculations, 253
  - cross section, 310, 311
  - elastic collisions, 193, 247, 248, 250, 252, 256, 258
  - excitation, 349
  - fine structure effects, 311
  - inelastic, 208
  - inelastic collisions, 246, 247, 249, 251, 253, 254, 257, 259
  - inelastic scattering by  $\text{Fe}^+$ , 311
  - intermediate energies, 314
  - ionization, 349
  - psuedostate expansion, 314
  - resonance, 349
  - scattering amplitude, 193
  - triple differential cross section, target dependence, 261
- electron-atom and electron-ion scattering, 183
- electron-impact ionization, 359
- exchange effects, 242, 246
- excitation-autoionization, 360
  
- final-state correlations, photoionization, 104
- finite basis sets, 54, 126
- fluorine,  $\text{F}^{2+}$ , doubly-ionized, electron impact ionization, 363
  
- graphical representation, 21
- Green's function, 244
- ground-state correlations, photoionization, 104
  
- Hartree-Fock
  - mixed-parity, 77
  - potential, 42, 109, 129, 155, 188, 192
  - scattering amplitudes, 172
- helium
  - double photoionization cross section, 163
  - electron scattering, 217, 277, 279, 280, 283–285
  - photoionization cross section, 126, 141, 144, 145

- helium (*cont.*)  
 (positive ion)-electron scattering,  
 phase shifts, 140  
 triply differential cross section,  
 219, 222–224, 231–233
- hydrogen  
 electron scattering, 250, 251, 256,  
 257, 276, 279, 283, 284, 316–318,  
 320  
 multiphoton processes, 323  
 negative ion, photoionization  
 cross section, 141  
 photoelectron angular  
 distribution, 175  
 triply differential cross section,  
 226, 227, 229
- hydrogen-electron scattering, phase  
 shifts, 138
- hyperfine constants, 76
- hyperfine splittings, 72
- impulse approximation, 217
- intermediate normalization, 15, 50
- ionization energies, 75
- iron,  $\text{Fe}^{15+}$ , sodium-like, ionization,  
 364
- Kramers-Kronig relation, 295
- krypton, electron scattering, 282
- krypton, oxygen-like, electron  
 scattering, 332
- lead, electron scattering, 343
- linked-cluster expansion, 97
- lithium, electron scattering, 283, 284
- magnesium, photoionization cross  
 section, 147, 148
- mercury, electron scattering, 335
- mixed-parity Hartree-Fock, 77
- mixed-parity MBPT, 77, 80
- multiphoton ionization, 320, 323  
 above threshold ionization, 324  
 high frequency stabilization, 324
- multiphoton processes, 149, 320
- muonic hydrogen  
 electron scattering, 206  
 potential, 207
- negative ion formation, 201
- neon  
 electron scattering, 281  
 triply differential cross section,  
 219
- nitrogen, photoelectron angular  
 distribution, 177
- normalization  
 intermediate, 100  
 momentum scale, 96  
 perturbative correction, 101
- nuclear MBPT, 4
- optical limit, 215
- parity nonconservation, 65
- parity-favored transitions, 170
- parity-unfavored transitions, 170
- partial wave expansion, 265
- perturbation theory  
 close-coupling method, 349  
 convergence, 248  
 distorted wave approximation,  
 220, 238, 261, 349  
 first order, 244  
 Rayleigh-Schrödinger, 50  
 second order, 220, 243, 245
- photoionization, viii, 91  
 angular distribution, 167  
 configuration interaction, 135  
 coupled-equations, 114  
 cross section, 94  
 double, 150  
 double-excitation, 125  
 generalized resonance technique,  
 120  
 polarization effects, 117  
 relaxation effects, 117  
 single, 93
- platinum, photoionization cross  
 section, 113
- polarizability, 102, 131, 153
- positron-atom elastic scattering,  
 198
- post-collision interaction, 210
- potassium, photoelectron angular  
 distribution, 177

- potassium-like ions
  - electron scattering, 355
  - excitation, 355
- potential
  - $V^{(N-1)}$ , 109, 155, 160
  - $V^{(N-2)}$ , 155, 160
  - Hartree-Fock, 109, 129, 155, 188, 192
- projection operators, 15, 50
- radiation damping, 350
- radon, photoelectron angular distribution, 182
- random phase approximation, 60, 71
  - with exchange, 204
- Rayleigh-Schrödinger perturbation theory, 18, 50
- Redmond phase, 223
- relativistic effects, 13, 39, 69, 242, 325
- renormalization constant, 193
- rubidium, photoelectron angular distribution, 177
- screening potential, 269
- second Born amplitude, 294
- second quantization, 21, 45
- self-energy operator, 70, 72–74, 82, 190
- sodium
  - electron scattering, 247–249, 252–254, 258, 259
  - photoelectron angular distribution, 177
- sodium-like ions
  - electron scattering, 357
  - excitation, 357
- spherical spinors, 41
- structural radiation, 72
- Thomas process for mass transfer, 287
- Thomas ridge, 293
- threshold law
  - Wannier-Peterkop-Rau (WPR) theory, 261, 277
- time-evolution operator, 98
- triply differential cross section, 215
- tungsten
  - photoionization cross section, 123
  - singly-ionized, electron impact ionization, 363
- valence electrons, 51
- vector transition polarizability, 87
- weak nuclear charge, 67, 69, 88
- Wick's theorem, 23, 100
- xenon
  - electron scattering, 282
  - photoelectron angular distribution, 180
  - photoionization cross section, 119
  - $\text{Xe}^{6+}$ , cadmium-like, ionization, 364
- zinc, copper-like, energies, 45, 57, 59
