Part 1: ATOMIC STRUCTURE	1
1 Development of atomic many-body theory	3
<i>Ingvar Lindgren</i>	
1.1 Background	3
1.1.1 Nuclear MBPT	4
1.2 Development of atomic MBPT	5
1.2.1 The degeneracy problem	8
1.2.2 The all-order and coupled-cluster approach	10
1.2.3 Relativistic MBPT and QED	13
1.3 Basic perturbation theory	14
1.3.1 Brillouin-Wigner perturbation expansion	14
1.3.2 Rayleigh-Schrödinger perturbation expansion	18
1.4 Diagrammatic representation of MBPT	20
1.4.1 Second quantization and the graphical representation	21
1.4.2 Wick's theorem	23
1.4.3 Particle-hole representation	23
1.4.4 Wick's theorem for products of normal-ordered operators	25
1.5 Closed-shell systems	26
1.5.1 The linked-diagram expansion	27
1.5.2 All-order approach	31
1.6 Open-shell systems	33
1.7 The coupled-cluster approach	37
2 Relativistic many-body perturbation theory for highly charged ions	39
<i>W. R. Johnson</i>	
2.1 Introduction	39

viii	<i>Contents</i>	
2.2	Central-field Dirac equation	40
2.3	No-pair Hamiltonian	45
	2.3.1 Coulomb interaction	46
	2.3.2 Breit interaction	48
2.4	Perturbation theory	50
2.5	Angular reduction	52
2.6	Finite basis sets	54
2.7	Higher-order corrections	58
3	Parity nonconservation in atoms	65
	<i>S. A. Blundell, W. R. Johnson, and J. Sapirstein</i>	
3.1	Introduction	65
3.2	Overview of PNC effects in atoms	66
3.3	Relativistic MBPT in heavy neutral atoms	69
3.4	PNC calculations	77
	3.4.1 Mixed-parity HF	77
	3.4.2 Mixed-parity MBPT	80
	3.4.3 Sum-over-states approach for PNC amplitude	83
	3.4.4 Breit interaction	84
	3.4.5 Nuclear density	85
	3.4.6 Nuclear spin-dependent effects	86
	3.4.7 Electron-electron weak interaction	87
	3.4.8 Vector transition polarizability	87
3.5	Conclusions	88
	Part 2: PHOTOIONIZATION OF ATOMS	91
4	Many-body effects in single photoionization processes	93
	<i>J. J. Boyle and M. D. Kutzner</i>	
4.1	Introduction	93
	4.1.1 The photoionization cross section	94
	4.1.2 The linked-cluster expansion	97
	4.1.3 An alternative expansion	102
4.2	The evaluation of first-order diagrams	103
	4.2.1 Ground- and final-state correlation diagrams	104
	4.2.2 The choice of the potential V	108
4.3	The evaluation of an infinite-order series of diagrams	114
	4.3.1 The coupled-equations technique	114
	4.3.2 The generalized resonance technique	120
4.4	Summary	123
5	Photoionization dominated by double excitation in two-electron and divalent atoms	125
	<i>T.-N. Chang</i>	
5.1	Introduction	125
5.2	B-spline-based configuration-interaction method	127

<i>Contents</i>		ix
5.3	Configuration-interaction method for continuum spectrum	135
5.4	Applications	139
6	Direct double photoionization in atoms	150
	<i>Z. Liu</i>	
6.1	Introduction	150
6.2	Basic formalism	153
6.3	Correction to electron correlation interaction	160
6.4	Correction to dipole interaction	162
6.5	Future work	166
7	Photoelectron angular distributions	167
	<i>Steven T. Manson</i>	
7.1	Introduction	167
7.2	Theory	168
	7.2.1 General considerations	168
	7.2.2 Angular momentum transfer analysis	169
	7.2.3 The effects of approximations	172
	7.2.4 Application of the angular momentum transfer analysis	174
7.3	Illustrative examples	179
7.4	Final remarks	182
	Part 3: ATOMIC SCATTERING	
	A. General considerations	183
8	The many-body approach to electron-atom collisions	185
	<i>M. Ya Amusia</i>	
8.1	Introduction	185
8.2	The diagrammatic method in the scattering problem	186
8.3	The Dyson equation and the optical model	191
8.4	Calculation of the elastic scattering cross section	193
8.5	Resonance scattering	199
8.6	Formation of negative ions and the scattering problem	201
8.7	Collisions with open shell and excited atoms	202
8.8	The scattering of muonic hydrogen by electrons	206
8.9	Inelastic electron-atom scattering	208
8.10	Concluding remarks	211
9	Theoretical aspects of electron impact ionization, (e, 2e), at high and intermediate energies	213
	<i>P. L. Altick</i>	
9.1	Introduction	213
9.2	The highest energies: the optical and impulsive limits	215
9.3	High energies: distorted waves and the second Born approximation	220
9.4	Conclusion	232

	Part 3: ATOMIC SCATTERING	
	B. Low-order applications	235
10	Perturbation series methods for calculating electron-atom differential cross sections	237
	<i>D. H. Madison</i>	
10.1	Introduction	237
10.2	Theory	238
10.3	Practical considerations	240
	10.3.1 Bound state wavefunctions	240
	10.3.2 Distorting potentials	240
	10.3.3 Exchange distortion	242
	10.3.4 Relativistic effects	242
	10.3.5 Second order calculations	243
	10.3.6 Green's function	244
10.4	Results	244
	10.4.1 First order results	244
	10.4.2 Second order effects	245
	10.4.3 Convergence of perturbation series	248
	10.4.4 Comparison with close-coupling calculations	253
10.5	Conclusions	260
11	Target dependence of the triply differential cross section for low energy (e, 2e) processes	261
	<i>Cheng Pan and Anthony F. Starace</i>	
11.1	Introduction	261
11.2	Theory	265
	11.2.1 Partial wave expansion	265
	11.2.2 MBPT expansion for $\langle \Phi_f \Delta H \Psi_i \rangle$	268
	11.2.3 Triply differential cross section for the $\theta_{12} = \pi$ case	272
11.3	Results and discussion	275
11.4	Concluding remarks	285
12	Overview of Thomas processes for fast mass transfer	287
	<i>J. H. McGuire, Jack C. Straton, and T. Ishihara</i>	
12.1	Introduction	287
12.2	The classical Thomas process	288
12.3	Quantum mechanics	289
12.4	Interpretations	293
12.5	Destructive interference of Thomas amplitudes	297
12.6	Summary	298
12.7	Appendix	299
	12.7.1 Overall momentum and energy conservation: the sharp ridge	299
	12.7.2 Conservation of intermediate energy: the broad ridge	300

Contents xi

Part 3: ATOMIC SCATTERING		
	C. All-order applications	303
13	<i>R</i>-matrix theory: some recent applications	305
	<i>Philip G. Burke</i>	
13.1	Introduction	305
13.2	Basic theory	306
13.3	Recent applications	311
	13.3.1 Electron scattering by ions of Fe	311
	13.3.2 Electron scattering at intermediate energies	314
	13.3.3 Multiphoton processes	320
13.4	Conclusions	324
14	Electron scattering from atomic targets: application of Dirac <i>R</i>-matrix theory	325
	<i>Wasantha Wijesundera, Ian Grant, and Patrick Norrington</i>	
14.1	Introduction	325
14.2	Theory	325
	14.2.1 Inner region	326
	14.2.2 Outer region	329
	14.2.3 Matching of inner and outer region solutions	331
14.3	Method of calculation and results	332
	14.3.1 Kr XXIX	332
	14.3.2 Hg	335
	14.3.3 Pb	343
	14.3.4 Cs	346
14.4	Conclusions	347
15	Electron-ion collisions using close-coupling and distorted-wave theory	349
	<i>D. C. Griffin and M. S. Pindzola</i>	
15.1	Introduction	349
15.2	Electron-impact excitation	350
	15.2.1 Theoretical methods	350
	15.2.2 Non-resonant excitation in K-like ions	355
	15.2.3 Electron-impact excitation including resonances for Na-like ions	357
15.3	Electron-impact ionization	359
	15.3.1 Theoretical methods	359
	15.3.2 Direct ionization of F^{2+} and W^+	363
	15.3.3 Excitation-autoionization of Xe^{6+} and Fe^{15+}	364
	15.3.4 Dielectronic-capture resonances in C^{3+}	367
15.4	Summary	369
	<i>Appendix: Units and notation</i>	371
	<i>References</i>	376
	<i>Index</i>	402
