Preface

I have received intellectual and financial support in the writing of this book from many people and institutions. In particular, I should like to thank Nuffield College, Oxford, University College London and the Central Research Fund of London University, Cambridge University and Emmanuel College, Cambridge, and Birkbeck College, London, for help in the form of facilities for research, research assistance, and sabbatical leave. I am also grateful to Methuen and Co. Ltd and the editors of the Economic History Review for their permission to reprint sections of this work which have previously been published.

Many members of firms in the machine tool industry helped me and gave me advice and hospitality during the course of my research. In particular, I should like to thank Mr R. C. Bragger and Mr J. T. Clements of James Archdale and Co. Ltd, Mr D. Mitchell and Mr G. C. Butler of the Butler Machine Tool Co. Ltd, Mr J. H. Hartopp, Mr J. D. Ellson and Mr J. Hugo of Alfred Herbert Ltd, Sir Stanley Harley of Coventry Gauge and Tool Co. Ltd, and Mr R. Gibson of A. A. Jones and Shipman Ltd. Others who gave me much help were Mr H. O. Barrett of the Machine Tool Trades Association, Mr P. A. Sidders of Machinery, and Mr F. G. Barkway of Kelly’s Directories. I should also like to thank Mr Ian Hollick for permission to use the papers of Sir Alfred Herbert.

Much of this work would have been impossible without the help of Greenwood and Batley Ltd, and in particular of Mr L. Haberman and Dr Charles Greenwood. The archives of the firm have now been deposited with Leeds Central Library (Archives Department) and I should like to thank Mr Collinson of that department for his help.

I owe a great deal to many people who have criticised my work, and I should like to thank in particular R. M. Hartwell, P. Mathias, S. Nicholas, N. Rosenberg and S. B. Saul. My greatest debts, however, are threefold. This book began as a D.Phil thesis for the University of Oxford, and my supervisor as a research student was H. J. Habakkuk. To him I owe the suggestion of a topic, constant stimulus and encouragement, and the privilege of contact with an exemplar of the crafts of economic historian and research supervisor. Stanley Engerman not only examined my thesis, but has discussed successive drafts of this book many times since, and its present shape, though not its deficiencies, owes much to his suggestions.
The British machine tool industry

and advice. Lastly, my wife has lived with the history of machine tools throughout our married life; she has despaired and exulted with me, supported and criticised. It is for this and much else that this book is dedicated to her.

R.C.F.
