<b>1</b>	<b>1</b>
<b>Introduction to reliability systems</b>	<b>1</b>
<hr/>	
1.1	1
Background	
1.2	1
General description of the problem	
1.3	2
System hardware, human factors, software, and environment	
1.3.1	3
Hardware reliability	
1.3.2	3
Human factors	
1.3.3	5
Software	
1.3.4	5
Physical and economic constraints	
1.4	6
System effectiveness models	
1.4.1	7
Attributes of system effectiveness	
1.4.2	8
Human factors in system effectiveness	
1.4.3	10
Mission effectiveness	
1.5	10
Fundamental system configurations and reliability functions	
1.5.1	10
Series configuration	
1.5.2	11
Parallel configuration	
1.5.3	13
Series-parallel configuration	
1.5.4	13
Parallel-series configuration	
1.5.5	15
Hierarchical series-parallel systems	
1.5.6	16
$k$ -out-of- $n$ systems	
1.5.7	17
Complex configuration	
1.5.8	20
Coherent systems	
1.5.9	23
Cold standby redundancy in a single-component system	
1.5.10	25
Redundancy with imperfect switching system	
1.5.11	28
Multi-cause failure model	
Exercises	29

**vi Contents**

<b>2</b>	<b><u>Analysis and classification of reliability optimization models</u></b>	<b>33</b>
2.1	Introduction and notation	33
2.2	Optimization models	34
2.3	Problem reduction	39
2.4	Classification of system-reliability optimization	41
2.5	Recent developments in reliability optimization	46
2.5.1	Heuristics for redundancy allocation	47
2.5.2	Metaheuristic algorithms for redundancy allocation	48
2.5.3	Exact methods for redundancy allocation	54
2.5.4	Heuristics for reliability–redundancy allocation	56
2.5.5	Multiple objective optimization in reliability systems	57
2.5.6	Optimal assignment of interchangeable components in coherent systems	59
2.5.7	Effort function optimization	61
2.6	Applications	62
2.7	Discussion	62
	Exercises	64
<b>3</b>	<b><u>Redundancy allocation by heuristic methods</u></b>	<b>66</b>
3.1	Introduction	66
3.2	Definitions and examples	67
3.3	Heuristic methods with 1-neighborhood solutions	71
3.3.1	The Misra, Sharma, and Venkateswaran method	72
3.3.2	The Gopal, Aggarwal, and Gupta method	74
3.3.3	The Nakagawa–Nakashima method	76
3.3.4	An extension of the NN method for complex systems	79
3.3.5	The Dinghua method	80
3.4	Other heuristic methods	83
3.4.1	The Kohda–Inoue method	83
3.4.2	The Kim–Yum method	83
3.4.3	Ushakov’s heuristic method	87
3.4.4	The Misra method	88
3.5	Discussion	89
	Exercises	90
<b>4</b>	<b><u>Redundancy allocation by dynamic programming</u></b>	<b>92</b>
4.1	Introduction	92
4.2	The basic dynamic programming approach	95
4.3	The DP approach using Lagrange multipliers	101

**vii Contents**

4.4	The DP approach using dominating allocations	107
4.5	The DP approach for hierarchical series-parallel systems	112
4.6	Discussion	117
	Exercises	118
<b>5</b>	<b>Redundancy allocation by discrete optimization methods</b>	<b>121</b>
5.1	Introduction	121
5.2	The 0–1 linear programming formulation	123
5.3	Branch-and-bound methods	125
	5.3.1 Redundancy allocation in a series system	126
	5.3.2 Redundancy allocation in a complex system	130
5.4	A partial enumeration method	135
5.5	The lexicographic method	137
5.6	Discussion	142
	Exercises	142
<b>6</b>	<b>Reliability optimization by nonlinear programming</b>	<b>145</b>
6.1	Introduction	145
6.2	The Lagrangian method	148
6.3	Penalization methods	152
	6.3.1 The barrier method	153
	6.3.2 The penalty method	156
	6.3.3 The mixed penalty function method	158
	6.3.4 The penalization method with Lagrange multipliers	158
6.4	Discussion	163
	Exercises	164
<b>7</b>	<b>Metaheuristic algorithms for optimization in reliability systems</b>	<b>166</b>
7.1	Introduction	166
7.2	Genetic algorithms	166
	7.2.1 Genetic algorithms for system-reliability optimization	172
7.3	The simulated annealing method	188
	7.3.1 Reliability optimization by simulated annealing	191
	7.3.2 The nonequilibrium simulated annealing algorithm	195
7.4	The tabu search method	197
	7.4.1 Reliability optimization by tabu search	199
7.5	Discussion	204
	Exercises	206

## viii Contents

<b>8</b>	<b>Reliability–redundancy allocation</b>	<b>208</b>
8.1	Introduction	208
8.2	The method of Tillman, Hwang, and Kuo	211
8.3	The method of Gopal, Aggarwal, and Gupta	211
8.4	The method of Kuo, Lin, Xu, and Zhang	215
8.5	The method of Xu, Kuo, and Lin	216
8.6	The surrogate constraints method	219
	8.6.1 The DP approach to solve surrogate problem $S(\mathbf{u})$	224
8.7	Evolutionary algorithms	226
	8.7.1 The genetic algorithm for reliability–redundancy optimization	227
	8.7.2 The evolutionary algorithm for reliability–redundancy optimization	228
8.8	Discussion	232
	Exercises	233
<b>9</b>	<b>Component assignment in reliability systems</b>	<b>236</b>
9.1	Introduction	236
9.2	Optimal assignment of components in series-parallel systems	237
	9.2.1 Optimal allocation of components in series-parallel systems	238
	9.2.2 A heuristic approach for optimal assignment of components	246
	9.2.3 Optimal assignment for two path sets: bicriteria approach	249
9.3	Optimal assignment of components in parallel-series systems	251
	9.3.1 Optimal allocation of components in parallel-series systems	252
	9.3.2 Optimal assignment in two cut sets: bicriterion approach	257
9.4	Component assignment in coherent systems	262
	9.4.1 Optimal component assignment through pairwise interchanges	263
	9.4.2 The Malon greedy algorithm	265
	9.4.3 The greedy algorithm of Lin and Kuo	265
	9.4.4 Invariant optimal assignments	269
9.5	Discussion	271
	Exercises	272
<b>10</b>	<b>Reliability systems with multiple objectives</b>	<b>275</b>
10.1	Introduction	275
10.2	Classification of multiple objective decision making	278
10.3	MODM solutions	279
10.4	Multiple objective reliability problems	282
10.5	Reliability–redundancy allocation with multiple objectives	283
	10.5.1 Problem description	283
	10.5.2 The multiple objective optimization approach	287

ix	<b>Contents</b>	
10.6	Fuzzy multiple objective optimization	289
10.7	Discussion	293
	Exercises	294
<b>11</b>	<b>Other methods for system-reliability optimization</b>	<b>296</b>
11.1	Introduction	296
11.2	Optimization of effort function	296
	11.2.1 Albert method for a series system	297
	11.2.2 The Dale–Winterbottom method for a general coherent system	299
11.3	Discussion	301
	Exercises	301
<b>12</b>	<b>Burn-in optimization under limited capacity</b>	<b>302</b>
12.1	Introduction	302
12.2	Statement of the problem	303
	12.2.1 Objective function and reliability constraints	304
	12.2.2 Burn-in capacity	305
	12.2.3 Problem formulation	306
12.3	Optimization and the decision tree	306
12.4	Application to an electronic product	309
	12.4.1 Assumptions	309
	12.4.2 Unconstrained minimization	310
	12.4.3 System reliability	311
	12.4.4 Constrained minimization	311
12.5	Discussion	313
	Exercises	314
<b>13</b>	<b>Case study on design for software reliability optimization</b>	<b>317</b>
13.1	Introduction	317
13.2	The basic execution time model	317
13.3	Resource usage	318
13.4	Reliability modeling	319
	13.4.1 The two-component model	320
	13.4.2 The three-component model	323
13.5	Formulation of the software reliability optimization problem	324
	13.5.1 A pure software system	325
	13.5.2 A hardware and software mixed system	325

Way Kuo, V. Rajendra Prasad, Frank A. Tillman and Ching-Lai Hwang

Table of Contents

[More information](#)

<b>x</b>	<b>Contents</b>	
13.6	Discussion	329
	Exercises	329
<b>14</b>	<b>Case study on an optimal scheduled-maintenance policy</b>	<b>332</b>
14.1	Introduction	332
14.2	Criteria functions	333
14.3	The strictest selection	335
14.4	The lexicographic method	335
14.5	The Waltz lexicographic method	337
14.6	SEMOPS: an interactive method	339
14.7	Discussion	341
<b>15</b>	<b>Case studies on reliability optimization</b>	<b>343</b>
15.1	Case study on maintenance for mission effectiveness	343
15.2	Case study on PWR coolant system	346
15.3	Case study on design of a gas pipe line	351
	Exercises	357
	<b>Appendices</b>	<b>358</b>
	Appendix 1 Outline of dynamic programming	358
	Appendix 2 The Hooke–Jeeves (H–J) algorithm	360
	Appendix 3 Derivation of polytope $U^{k+1}$ from $U^k$	362
	Appendix 4 Consecutive $k$ -out-of- $n$ systems	364
