  - pole and line using bait fish 254
  - purse seine 178
  - salmon nets 329
- seine-net 39
- seine-net for dolphins 25
- size selectivity of 315, 318-20
- use of less efficient 52, 269
- weirs or traps 20, 39-43, 45-6, 48-9

Fishing grounds 24, 300
- different patterns by species 105
- expanding as catch rates decline 100, 105, 208, 271, 342n15

Fishing mortality 185, 196, 201, 226, 313
- higher than expected 145
- Fishing mortality rate 208, 248, 302-10
- clarification from Baranov’s 1918 paper 308, 347n4, 350n7b
- estimated from mark and recapture data 145, 302, 344n23
- Graham’s two definitions 303
- relationship between annual and instantaneous 302-10, 327
- Thompson and Bell’s definition 302
- Fishing out 169 (see also Overfishing)
- Fishing power 118
- necessity of measuring 121, 327
- of research vessels 143
- Fishing up 120, 207 (see also Effects of fishing)
- Fishing vessels
  - floating factories for whaling 214-15, 220-1
  - increases in size over time 86, 100-6, 230
  - mothership and dorries 268
  - sailing smack 53, 100-7
  - steam and diesel engines replace sail 10, 53, 100-7, 203, 220, 230
  - supplemental power equipment 203

Flour beetle 332

Fluctuations
- in climate 9
- in ecosystems and populations 8
- in fish price, short versus long-term 122
- in ocean currents 9, 24, 174
- in the essence of ecosystems 8-10

Fluctuations in abundance 8, 113, 126, 344n18
- independent of man’s activities 93, 123, 127, 286-7
- need to determine extent due to natural causes 123
- of mammal populations 218
- of young fish reflected in commercial catches 127
- reality of apparent cycles 286-7

Fluctuations in catches
- causes of 9, 21-34, 41, 68, 70, 279
- described 1-2, 5, 8-9, 12-20, 57
- early scientific studies 21-34
- four causes suggested 21
- related to lunar cycle 173
- three patterns described 10-21

Fluctuations in fisheries
- caused by fluctuations in year classes 133-4, 163, 169
- caused by food 48-51
- caused by pollution, 43, 63
- caused by predation 48-51
382 Subject index

Fluctuations in fisheries continued
caused by weirs 39-43, 48-51
eyear scientific studies of 21-34
fisheries structured in response to 16-7, 337n1b
the great fisheries 124-38
increase in catches of small fish 164
natural fluctuations versus overfishing 335, 349n2b
revealed by varying age composition 132
three patterns described 10-21
Fluctuations in year class strength
correlated with sunshine 174
correlated with wind direction 192
correlations with environment fail 176
disturb equilibrium conditions 256, 261
haddock 164-70, 269
hake 175-6
herring 133-4, 170-3
mackerel 174, 185-92
obscure understanding of reproductive
process 290-2
scup 50

growth versus recruitment  343n12
ICES claims for placæ  157
indicated by decrease in catch rates  117
information required to determine  122, 297
limited to single species effects  119
not indicated by changes in age distribution during fishing  207
of California sardines  247–54
of rarer species due to profits on more common species  200
Subject index

of sardines claimed by California Fish and Game Commission 247
Petersen’s illustration of 118–20
possible for marine fish 180
possible to measure 121
profitable to allow young fish to grow larger 117
relationship to small plaice and to supply of fish problems 120
rooted in economic organization of industry 324
strong evidence required for each fishery 180
Overfishing Committee, see International Council for the Exploration of the Sea
Overfishing Conference, London, see International Overfishing Conference
Oxford University, England 216
Oyster 135–6, 184

Panama 254
Papal Brief, anathematizing dolphins 24–5
Parasites, more abundant at higher population densities 288
Passamaquoddy Bay, New Brunswick 205–7
Pelagic fisheries 219
Permanent International Commission, under International Overfishing Convention 234, 295, 301
