CONTENTS

PREFACE	<i>page</i> xi
NOTATION	xv
1 PREVIEW	
2 PRECESSION, NUTATION AND WOBBLE	
1. Wobble and precession	5
2. Causes of precession and forced nutation	6
3. Wobble and length of day	7
3 DYNAMICS	
1. Fundamental equations	9
2. Frames of reference	10
3. Further discussion of the Liouville equation	12
4 DEFORMATION	
1. Stress, strain and deformation	15
2. Energy and stability	19
3. Generalized 'Q'	21
5 LOVE NUMBERS AND ASSOCIATED COEFFICIENTS	
1. The Love numbers h , k , and l	23
2. Rotational deformation	24
3. The secular Love number	25
4. The fluid Love numbers	26
5. The tidal-effective Love numbers	27
6. The 'equivalent' Earth	28
7. Love numbers of degree n	29
8. Load deformation and the coefficients h' , k'	29
9. Load deformation, second order	31

viii	CONTENTS	
10.	Fluid Earth with surface tension	<i>page</i> 32
11.	Love operators and complex Love numbers	33
12.	A systematic development	34
6 SOLUTIONS TO THE APPROXIMATE LIOUVILLE EQUATION		
1.	Perturbations	37
2.	Free wobble	38
3.	Forced wobble	40
4.	Transfer function	41
5.	A geometric interpretation	43
6.	Sway	45
7.	Solutions for various excitation functions	46
8.	The excitation function	51
9.	Some idealized illustrations	54
7 OBSERVATIONS OF LATITUDE		
1.	A historical note	58
2.	Methods of observation	62
3.	Methods of reduction	64
4.	Tidal disturbance in latitude	67
5.	Summary of observations	73
8 OBSERVATIONS OF THE LENGTH OF DAY		
1.	A historical note	77
2.	Methods of observation	79
3.	Tidal disturbance in the l.o.d.	87
9 SEASONAL AND OTHER SHORT-PERIOD VARIATIONS		
1.	Astronomical evidence	90
2.	Tides	97
3.	The inverted barometer problem	100

Cambridge University Press

Walter H. Munk and Gordon J. F. MacDonald

Table of Contents

[More information](#)

CONTENTS	ix
4. Geostrophic and ageostrophic motion	<i>page</i> 104
5. Distribution of air and water	106
6. Winds and currents	123
7. Torque approach	128
8. Discussion of the seasonal variation	129
9. The continuous spectrum	140
10 CHANDLER WOBBLE	
1. Astronomical evidence	144
2. The concept of an instantaneous Chandler period	150
3. Tidal-effective rigidity and viscosity	153
4. Pole tide and Love numbers	155
5. Ellipticity of the Chandler wobble	162
6. Generation	163
7. Dissipation	167
8. The Love number k	173
9. Summary	174
11 HISTORICAL VARIATIONS	
1. Astronomical evidence concerning wobble	175
2. Modern observations concerning the l.o.d.	177
3. Ancient eclipses	186
4. Spectra of modern observations	191
5. The turning points	194
6. Dissipation of tidal energy	198
7. Bodily tides	207
8. Ocean tides	209
9. Atmospheric tides	221
10. Interplanetary torque	227
11. Inertia	231
12. Core	239
13. Summary	247

CONTENTS

12 GEOLOGICAL VARIATIONS

1. Historical note	<i>page</i> 250
2. Paleomagnetic evidence	251
3. Paleontological and paleoclimatic evidence	259
4. Paleo-winds	262
5. The excitation function	262
6. Polar wandering of a Maxwell Earth: an exercise	265
7. Present position of the pole	275
8. Finite strength	279
9. Continental drift and polar wandering—rules of the game	282
10. Summary	284
APPENDIX	287
1. The Ocean Function	287
2. Power spectra	291
BIBLIOGRAPHY	297
INDEX OF AUTHORS AND SUBJECTS	315
