## CAMBRIDGE GEOGRAPHICAL STUDIES

- 1 *Urban analysis*, B. T. Robson
- 2 *The urban mosaic*, D. W. G. Timms
- 3 *Hillslope form and process*, M. A. Carson and M. J. Kirby
- 4 *Freight flows and spatial aspects of the British economy*, M. Chisholm and P. O'Sullivan
- 5 *The agricultural systems of the world: an evolutionary approach*, D. B. Grigg
- 6 *Elements of spatial structure: a quantitative approach*, Andrew D. Cliff, P. Haggett, J. K. Ord, K. A. Bassett and R. B. Davies.
- 7 *Housing and the spatial structure of the city: residential mobility and the housing market in an English city since the Industrial Revolution*, R. M. Pritchard
- 8 *Models of spatial processes. An approach to the study of point, line and area patterns*, Arthur Getis and Barry Boots
- 9 *Tropical soils and soil survey*, Anthony Young.

Porter, Elizabeth.  
Water management in England and Wales.

(Cambridge geographical studies; 10)

Bibliography: p.

Includes index.

1. Water-supply--England. 2. Water-supply--Wales. I. Title. II. Series.  
TD57.P67 363,6'10942 77-83998

ISBN 978-0-521-21865-8 hardback  
ISBN 978-0-521-10561-3 paperback

## CONTENTS

---

	<i>page</i>
<i>List of tables and figures</i>	vii
<i>Acknowledgements</i>	ix
<b>1 The nature of water management</b>	<b>1</b>
The water management system	3
System inputs – some characteristics of water resources	5
System outputs – the end products of water management	9
The centre of the system – management techniques	11
Decision-making in water management	13
Some criteria for judging a water management system	15
<b>2 Water management legislation in England and Wales</b>	<b>18</b>
Land drainage and flood prevention	19
Water supply	23
Effluent disposal and the prevention of pollution	25
The Water Act 1973 and the Water Authorities	27
National water policy and institutions	28
Water and society	31
<b>3 Source development for the supply of Manchester</b>	<b>34</b>
The early development of Manchester's water supply	36
The Ullswater controversy	39
Conflicts of interest in the development of inland surface storage	45
Public supply in the reorganised water industry	48
<b>4 The allocation of water for spray irrigation</b>	<b>53</b>
Abstraction licensing	56
Charges for abstracted water: present policies and some possible alternatives	61
Supply and demand for irrigation water	65
Priorities in water allocation	69
<b>5 The management of groundwater resources</b>	<b>72</b>
Control of groundwater abstraction	78
Conjunctive use of groundwater and surface sources	80
Groundwater augmentation of river flows	81
Artificial recharge of aquifers	85
Groundwater research	91
<b>6 Flood damage reduction</b>	<b>93</b>
Reducing flood damage in theory and practice	95
Engineering works for flood protection	99

vi	<i>Contents</i>	
	Land use regulation to control flood damage	101
	Flood proofing measures	103
	Flood warning and emergency action	105
	Flood insurance	109
	Flood damage information	111
7	Effluent disposal and the control of river pollution	116
	Pollution prevention	118
	The River Mersey	120
	The River Trent	125
	Large scale works for effluent disposal	130
	Instruments of policy: pollution control through discharge consents	132
	Instruments of policy: pollution charges	134
8	Some national aspects of water management	136
	A national strategy for water supply	137
	National economic and financial policies	144
	A national organisation for the water industry	149
9	Evaluation	153
	Does the system allow integrated management of all aspects of water use?	153
	Can the management unit apply the full range of management techniques?	155
	Is the size of the unit such as to accommodate hydrologic interdependencies and to effect economies of scale?	156
	Does the system encourage efficiency in water use and in public investment?	158
	Can all relevant interests contribute to water management decisions?	160
	Are there effective links between management units, with national bodies and with central government?	161
	Conclusions	163
	<i>References</i>	166
	<i>Legislation cited</i>	171
	<i>Index</i>	172

## LIST OF TABLES AND FIGURES

---

### *Tables*

1	Comparison of annual irrigation costs with summer- and winter-stored abstraction	68
2	Potential artificial recharge schemes in England and Wales	90
3	Alternative adjustments to floods	96
4	Performance of sewage treatment works in the North West region, compared with the terms of their discharge consents	121
5	Calculated effect of a 3 percent annual increase in effluent volume on downstream river quality	132

### *Figures*

1	The water management system	4
2	Block diagram of a river basin	5
3	The river basin system: points of intervention	6
4	Complementary and conflicting water uses	11
5	Watershed districts proposed by Frederick Toplis in 1879	20
6	Water Authorities in England and Wales	21
7	Convergence of responsibility for water services upon the Water Authorities	22
8	Manchester's reservoirs in Longdendale	37
9	Manchester's Lake District sources and aqueducts	40
10	The Ullswater pumping station	44
11	Some proposals for an integrated supply system for the North West	50
12	Areas irrigated, by agricultural regions, 1974	54
13	Total area irrigated in a dry season	57
14	Construction of wells tapping the confined aquifer below London, 1850–1965	73
15	Groundwater contours in the London Basin, 1850–1965	74
16	Integration of surface and groundwater resources	77
17	The Great Ouse groundwater scheme	83

## ACKNOWLEDGEMENTS

---

The author wishes to thank the many people who helped during the book's preparation. These include staff of the Anglian, North West, Severn–Trent and Thames Water Authorities, the Central Water Planning Unit, the Department of the Environment Directorate of Water, the Flood Hazard Research Project at the Middlesex Polytechnic, the Institute of Hydrology, the Ministry of Agriculture, Fisheries and Food, the National Water Council and the Water Research Centre. I am especially indebted to Lord Ashby without whose initial encouragement the work might never have been undertaken, and to the Council of the Royal Society for a research grant from the 20th International Geographical Congress Fund.

The following kindly granted permission to reprint or modify material in figures and tables: Anglian Water Authority for figure 17 from *Eighth Annual Report 1972–3*, Great Ouse River Authority 1973; The Controller, Her Majesty's Stationery Office (Crown copyright reserved) for figures 11 and 27 and table 2 from *Water Resources in England and Wales 1973*, and for figures 14 and 15 from *Artificial Recharge of the London Basin: Hydrogeology 1972*; Institution of Civil Engineers for figure 18 from *Symposium on the Conservation of Water Resources in the United Kingdom 1963*; Institution of Water Engineers and Scientists for table 5 from *Water Treatment and Examination* 24 1975; Methuen and Co Ltd for figure 4 from *Water, Earth and Man 1969*; Ministry of Agriculture, Fisheries and Food for figures 12 and 13 drawn from data collected in a special inquiry into irrigation 1975; North West Water Authority for figure 10 from *Ullswater/Windermere Scheme: Ullswater Works* Manchester Corporation Waterworks 1969 and for table 4 from *First Annual Report 1974–5*; Oxford University Press, Inc. for figure 22 from *Natural Hazards: Local, National, Global* by Gilbert F. White et al. Copyright © 1974 by Oxford University Press, Inc. Reprinted by permission; E. C. Penning-Rowsell and J. B. Chatterton for figures 23 and 24 from *The Benefits of Flood Alleviation: A Manual of Assessment Techniques 1977*; Severn–Trent Water Authority for figure 19 redrawn from a floodplain map by the Trent River Authority, for figure 21 from *Flood Forecasting and Flood Warning Procedure*, Trent River Authority 1970 and for figures 25 and 26 from *Water Quality 1973*; United States Army, Office of the Chief of Engineers for figure 20 from *Flood-Proofing Regulations 1972*.
