## Subject index

- adjoint operator, 159  
 angular velocity correlation function, 29  
 angular velocity correlation time, 29, 177  
 anisotropic chemical shift, 101  
 asymmetric molecules, 83, 84, 109, 110, 124, 139–41, 183–5  
 asymmetry parameter, 104, 109, 122, 124, 150, 157  
 autocorrelation function, 22  
  
 basis of a representation, 161  
 benzene  $C_6H_6$ , 156  
 Bloch equations, 7–9, 46  
 Bohr magneton, 1  
 Boltzmann distribution, 3, 5  
 Born's probability density, 32  
  
 canonical transformation, *see* unitary transformation  
 carbon disulphide  $CS_2$ , 155  
 carbon tetrachloride  $CCl_4$ , 155  
 carbon tetrafluoride  $CF_4$ , 150  
 centred random variable, 18  
 chemical exchange, 93–7  
 chemical exchange time, 94, 148, 149  
 chemical shift, 101  
 chloroform  $CHCl_3$ , 89, 151, 152  
 circular plate molecules, 85  
 Clebsch–Gordan coefficients, 116, 170  
 Cole–Davidson distribution, 158  
 complete set, 160  
 complex magnetic susceptibility, 10–12  
 conditional probability density, 19–21  
 correlation function, 21  
   *see also* angular velocity correlation function, autocorrelation function, cross-correlation function, normalized autocorrelation function, orientational correlation function  
 correlation time, 22, 39, 148, 149  
   *see also* angular velocity correlation time, orientational correlation time  
 cross-correlation function, 22  
 crown ether, 151  
 Curie's law, 5  
  
 Debye approximation, 30  
   *see also* asymmetric molecules, circular plate molecules, linear molecules, planar molecules, spherical molecules, symmetric rotator molecules  
 Debye limit, *see* Debye approximation  
 Debye theory, 14, 30, 89  
 density matrix, 33, 57  
 density operator, 33, 35, 57  
 diamagnetic screening, 101  
 diffusion coefficient, *see* rotational diffusion coefficient, self-diffusion coefficient  
 diffusion equation, 27, 81  
 diffusion theory, 30  
 diffusive motion, 27  
 dilution technique, 144  
 dimethylsulphoxide  $(CH_3)_2SO$ , 158  
 Dirac delta function, 23  
 ditertiobutyl nitroxide  $[(CH_3)_3C]_2NO$ , 152  
  
 effective field, 9  
 eigenfunction, 159  
 eigenvalue, 159  
 electric field gradient tensor, 122, 156, 157  
 electric quadrupole moment, 115, 118, 156  
 electron paramagnetic susceptibility, 5  
 ensemble average, 18, 21, 33  
 ergodic theorem, 18  
 Euler angles, 21, 165, 166, 172  
 Euler–Langevin equations, 29, 175  
 expectation value, 32  
 extended diffusion, 30  
 extreme narrowing approximation, 60, 88–91, 96, 97, 107, 130  
   *see also* asymmetric molecules, circular plate molecules, linear molecules, planar molecules, spherical molecules, symmetric rotator molecules  
  
 field gradient tensor, *see* electric field gradient tensor  
 friction time, 29, 148, 149

- g* factor, *see* nuclear *g* factor  
 Gaussian distribution, 17  
 Gaussian variable, 17  
 gyromagnetic ratio, 1, 144
- hard sphere molecular model, 23–7, 67–71, 74–7, 151  
 Hermitian conjugate, 161  
 hexadecapole interaction, 118  
 hydrogen fluoride HF, 94
- identity operator, 159, 161  
 inertial effects, 30  
 inertial theory, 30  
 infinitesimal generators of rotation, 164, 165, 169  
 interaction representation, 35–8, 42, 43  
 intermolecular interactions, 15, 67, 149–52  
 internal molecular rotations, 31, 157, 158  
 internal molecular vibrations, 31  
 intramolecular interactions, 15, 149, 152–8  
 irreducible tensor operator, 167, 168  
 isotropic chemical shift, 101  
 isotropic diffusion, 67
- J*-diffusion, 31  
 joint probability density function, 19, 21  
 jump length, 151  
 jump term, 74  
 jump time, 24, 68, 151
- Langevin equation, 27–9  
 Larmor angular frequency, 3  
 Larmor frequency, 3, 155  
 Larmor precession, 3, 10, 99  
 lattice, 5  
 lattice temperature, 13, 14  
 linear molecules, 81–3, 110–12, 125, 138, 139, 181–3  
 linear operator, 160  
 longitudinal relaxation, 6  
 longitudinal relaxation time, *see* spin–lattice relaxation time  
 Lorentzian curve, 11
- m*-diffusion, 30  
 magnetization per unit volume, 4–10, 44, 59  
 Markov process, 20  
 matrix representation, 161  
 matrix representative, 33, 37, 57, 161  
 mean squared flight distance, 26, 70, 151  
 mean time between flights, *see* jump time  
 methane CH<sub>4</sub>, 147, 150  
 mischmetal, 146  
 moment of probability distribution, 26
- neopentane C(CH<sub>3</sub>)<sub>4</sub>, 152  
 normalized autocorrelation function, 22  
 nuclear angular momentum, 1  
 nuclear *g* factor, 1, 2  
 nuclear magnetic moment, 1  
 nuclear magnetic relaxation, definition of, 5, 6  
 nuclear magnetic resonance absorption, 3  
 nuclear magnetic resonance effects, 10–12  
 nuclear magneton, 1  
 nuclear shielding, 99, 100  
 nuclear spin, 1  
 nuclear susceptibility, *see* static nuclear susceptibility
- orientational correlation function, definition of, 29  
 orientational correlation time, definition of, 177, 178  
 orthonormal set, 160
- paramagnetic nuclei, 5  
 Pauli spin operators, 56, 57  
 planar molecules, 84, 85  
 Poisson distribution, 18, 24  
 power absorption, 10–12  
 principle of detailed balance, 14  
 probability density function, 17  
 probability mass function, 17
- quadrupole coupling constant, 123, 156  
 quadrupole moment, *see* electric quadrupole moment
- radiofrequency (rf) field, 3, 14  
 random flights, 23–7, 67–74  
 random process, 20  
 random variable, centred, 18  
 continuous, 17  
 definition of, 17  
 discrete, 17  
 independent, 19  
*see also* Gaussian variable  
 random walk, *see* random flights  
 Rayleigh–Stokes laws, 89, 90, 146, 147  
 Redfield equations, 42–6, 52  
 reduced matrix element, 172  
 relaxation rates, 6, 178  
 relaxation times, *see* spin–lattice relaxation time, spin–spin relaxation time  
 relaxation times in a rotating coordinate frame, 9  
 rotation operator, 29, 46, 78, 102, 131–4, 163–7, 173–6  
 rotational Brownian motion, 28–30  
 rotational diffusion coefficient, 79, 154, 158

- rotational diffusion limit, *see* Debye approximation  
rotational diffusion theory, 30
- saturation, 12, 14  
saturation factor, 12  
scalar product, 39, 167  
self-adjoint operator, 32, 159, 164  
self-diffusion coefficient, 27, 28, 89, 151  
shielding anisotropy, 112  
shielding constant, 101  
Smoluchowski equation, 28  
spectral density, 22, 40, 46, 52, 53, 59–65, 76, 77, 90, 93, 95, 106, 119, 130–2, 145, 176–8  
*see also* asymmetric molecules, circular plate molecules, linear molecules, planar molecules, random flights, spherical molecules, symmetric rotator molecules, translational Brownian motion
- spherical harmonics, 47, 48, 163, 168  
spherical molecules, 79–81, 108, 109, 123, 124, 134–8, 148, 179, 180  
spherical polar coordinates, 164  
spherical tensors, 38, 46, 48–50, 102, 114, 128, 129, 166, 176  
definition of, 166  
spin, *see* nuclear spin  
spin-echo technique, 151  
spin-flip, 94–7  
spin–lattice relaxation, 6  
spin–lattice relaxation time, 6, 9, 59, 60, 65, 66, 76, 77, 90, 91, 93, 95, 97, 98, 107, 120, 121, 130, 145, 151, 153, 154  
*see also* asymmetric molecules, circular plate molecules, linear molecules, planar molecules, random flights, spherical molecules, symmetric rotator molecules, translational Brownian motion
- spin–rotation correlation time, 132  
spin–rotation relaxation rate, 153, 155  
spin–rotation tensor, 127  
spin–spin relaxation, 6  
spin–spin relaxation time, *see* spin–lattice relaxation time  
spin temperature, 14  
static nuclear susceptibility, 4, 5, 10  
stationary random process, 20  
steplike rotations, 158  
stochastic process, *see* random process  
stochastic rotation operator, 164  
*see also* rotation operator  
stochastic variable, *see* random variable  
symmetric rotator molecules, 86–8, 110, 111, 124, 125, 141, 142, 185, 186
