Foreword	
1 Introduction	1
1.1 Motivation, context and scope	1
1.2 Definition of black-hole scattering	5
1.3 Historical outline	7
1.4 Partial wave analysis: the scalar wave equation in the Schwarzschild field	9
2 Perturbations of black hole spacetimes	13
2.1 NP formalism: perturbation of the vacuum Kerr geometry	14
2.2 Relation of NP quantities to potential perturbations	18
2.3 Discussion: analytical properties of the separation functions	22
2.4 Asymptotic behavior, normalization and conservation relations	24
3 Integral spin plane waves in black hole spacetimes	29
3.1 Scalar waves, flat spacetime	29
3.2 Scalar waves, spherically symmetric (Schwarzschild) spacetime	31
3.3 Scalar waves, Kerr background (on-axis)	32
3.4 Scalar waves, Kerr background, arbitrary incidence	33
3.5 Electromagnetic plane waves	34
3.6 Gravitational plane waves	40
3.7 Aside: incident plane waves in the Reissner–Nordstrøm spacetime	48
4 Neutrino plane waves	52
4.1 Introduction	52
4.2 Neutrino waves in flat background spacetimes	53
4.3 Neutrino waves in curved spacetimes	55
4.4 Neutrino waves in Kerr background; separation of variables	56
4.5 Properties of neutrino plane waves	58
4.6 Transformation of plane waves; normal mode expansion	62
5 Scattering	70
5.1 Scattering of scalar waves	70

vi	<i>Contents</i>	
5.2	Scattering of electromagnetic waves	71
5.3	Scattering of gravitational radiation	72
5.4	Scattering of neutrinos	74
5.5	Absorption cross section	75
5.6	Scattering and phase shifts	76
6	Limiting cross sections	77
6.1	Low frequency cross sections	77
6.1.1.	Low frequency scalar cross sections	77
6.1.2.	Low frequency neutrino wave cross sections	83
6.1.3	Low frequency limits of electromagnetic and gravitational scattering	85
6.1.3.1.	Low frequency gravitational scattering	87
6.1.3.2.	The electromagnetic amplitude $a(\theta)$	92
6.2	High frequency cross sections	93
6.2.1.	Eikonal approximation for integer spin fields	93
6.2.2.	Eikonal approximation for neutrino fields	95
6.2.3.	On-axis observers: glories in high frequency scattering	97
6.2.3.1.	The attractive Coulomb problem	107
6.2.3.2.	Attractive Coulomb plus short-range attractive potential	109
6.2.3.3.	Glory scattering for long-range forces	111
6.2.3.4.	The scattering of massless scalar waves by a Schwarzschild ‘Singularity’	112
6.2.3.5.	Polarized wave glory scattering by black holes	115
7	Computation of cross sections	120
7.1	Angular equation	120
7.2	Radial equation	123
7.2.1.	The method of Press & Teukolsky and the JWKB approximation	124
7.2.1.1.	JWKB approximation for radial equation	126
7.2.2.	The Chandrasekhar–Detweiler method and the JWKB approximation	128
7.3	The Newtonian analogy revisited	133
8.	Absorption, phase shifts and cross sections for gravitational waves	136
8.1	Introduction	136
8.2	The square barrier and null torpedoes	136
8.3	Absorption cross sections	140
8.3.1.	Absorption cross sections: results for scalar waves	140
8.3.2.	Absorption cross sections: results for gravity waves	141

Cambridge University Press
978-0-521-11210-9 - Scattering from Black Holes
J. A. H. Futterman, F. A. Handler and R. A. Matzner
Table of Contents
[More information](#)

	<i>Contents</i>	vii
8.4	Phase shifts	145
8.5	Scattering cross sections	155
	8.5.1. The Schwarzschild scattering of massless scalar waves	155
	8.5.2. The Schwarzschild scattering of gravitational waves	156
8.6	Scattering in the Schwarzschild and Kerr geometries – interpretation: glories and spirals	158
9	Conclusion	167
	Appendix A1: Integrals used to express plane waves in terms of spin-weighted spheroidal functions	170
	Appendix A2: Addition formulae for spin-weighted spherical angular functions	174
	Appendix B	176
	References	177
	Index	182
