Contents

	<i>List of contributors</i>	page x
	<i>Preface</i>	xiii
1	When everything is connected	1
	1.1 Introduction	1
	1.1.1 Mobile communication and the Internet	1
	1.1.2 Towards merging of physical and digital worlds	3
	1.2 Future devices, lifestyle, and design	4
	1.2.1 Navigation in space and time	4
	1.2.2 Transformable device	5
	1.2.3 Fashion and expression	7
	1.2.4 Lifestyle and the mobile device (global knowledge, local view)	7
	1.3 Trusted personal device becomes a cognitive interface	9
	1.3.1 Assisted living and remote health care for the elderly	9
	1.3.2 Integrated cognitive systems	10
	1.4 Ambient intelligence	11
	1.4.1 Augmented reality	11
	1.4.2 Embedded ambient intelligence	12
	1.5 Technology challenges for humankind	13
	1.5.1 Looking for the global solution	13
	1.5.2 Global population is ageing and polarizing	14
	1.5.3 Environmental challenges need global solutions	16
	1.5.4 Sustainable economies and efficient ways of living	17
	1.6 About this book	18
	References	19
2	On the possible developments for the structural materials relevant for future mobile devices	21
	2.1 Introduction	21
	2.2 Nanocomposites by adding nanoscale reinforcements to tune the mechanical properties	22

2.2.1	Classic nanocomposites based on platelike reinforcements, as illustrated by nanoclay	24
2.2.2	Nanocomposites based on fibrillar reinforcements, as illustrated by carbon nanotubes (CNTs) and cellulose nanofibrils	26
2.3	Self-assembly and biomimetic approaches	30
2.3.1	Block copolymers: a facile concept for self-assembly and applications	30
2.3.2	Biological materials: selected examples	34
2.4	Functional surfaces	39
2.4.1	Controlled surface properties and dirt repellency	39
2.4.2	Surface-adhesion-based bioinspired gecko effects	41
2.5	Self-healing polymers	43
2.6	Conclusions	44
	References	45
3	Energy and power	51
3.1	Energy needs of future mobile devices	51
3.1.1	Renewable energy – portable energy sources	51
3.1.2	Power consumption in a mobile phone – now and in the future	53
3.1.3	Nanotechnologies for energy	55
3.2	Basics of battery and power source technologies	55
3.2.1	Batteries and supercapacitors	55
3.2.2	Nanostructured electrodes	56
3.2.3	Carbon nanohorns (CNHs) and their special surface properties	58
3.2.4	Supercapacitors – effect of surface	59
3.2.5	Porous electrodes	62
3.2.6	Fuel cell technologies	62
3.3	Energy harvesting – nanotechnologies in portable systems	63
3.3.1	Energy from temperature gradients	64
3.3.2	Ambient RF and vibration energy – micro- and nanowatt level power harvesting	64
3.3.3	Portable solar cells and nanotechnologies	67
3.4	Conclusions	73
	References	74
4	Computing and information storage solutions	76
4.1	Introduction	76
4.2	The digital mainstream	79
4.2.1	The ultimate limits of scaling	80
4.3	New approaches for computing	81
4.4	Logical computation principles	83
4.5	Data representation: analog or digital?	87
4.5.1	Differences between analog and digital processing	87

978-0-521-11216-1 - Nanotechnologies for Future Mobile Devices

Edited by Tapani Ryhanen, Mikko A. Uusitalo, Olli Ikkala and Asta Karkkainen

Table of Contents

[More information](#)

	Contents	vii
4.5.2 Computations with dynamical systems and hybrid analog–digital systems	88	
4.6 Physical implementation	89	
4.6.1 Recipes for nanocomputing systems	95	
4.7 Architectures for nanosystems	96	
4.7.1 Challenges of nanoarchitectures	97	
4.7.2 Examples	99	
4.8 Memory technologies for the future	103	
4.8.1 Flash memory	104	
4.8.2 Future options for memory technologies	105	
4.8.3 Comparison of the memory technologies	111	
4.9 Comparisons of nanocomputing solutions for mobile devices	111	
Acknowledgments	116	
References	117	
5 Sensing, actuation, and interaction	121	
5.1 Introduction	121	
5.1.1 Ubiquitous sensing, actuation, and interaction	121	
5.1.2 The need for sensors and actuators in future mobile devices	123	
5.2 Sensing	125	
5.2.1 Creating the sensors of the future	125	
5.2.2 Nature’s way of sensing	127	
5.2.3 Physical nanoscale transducers – nanowires and resonators	131	
5.2.4 Optical sensing	142	
5.2.5 Plasmonics	144	
5.2.6 Electrochemical sensors at the nanoscale	148	
5.3 Sensor signal processing	151	
5.3.1 Nanoscale enablers for signal processing	151	
5.3.2 Power amplification and signal coding	152	
5.3.3 Noise enhanced signal processing	153	
5.3.4 Large arrays of nanoscale components	156	
5.3.5 Machine learning in sensor signal processing	157	
5.3.6 Plasmonics in signal processing	158	
5.4 Actuation	160	
5.4.1 Principles of actuators in nature and artificial systems	160	
5.4.2 Nanoscale actuation based on electroactive polymers	160	
5.4.3 Mechanical metamaterials	164	
5.5 Towards future cognitive solutions	165	
References	166	
6 Future of Radio and Communication	174	
6.1 Introduction	174	
6.2 Some principles of radio communications systems	175	

Cambridge University Press

978-0-521-11216-1 - Nanotechnologies for Future Mobile Devices

viii

Contents

6.3	Wireless communications concepts	177
6.4	The state-of-the-art and some future trends	179
6.5	Radio system requirements	181
6.6	Radio implementation architectures	185
6.7	Nanoelectronics for future radios	188
6.7.1	Introduction	188
6.7.2	Potential of nanoelectronics in radios	189
6.7.3	RF properties of nanowire structures	190
6.7.4	Nanotechnology for radio front ends	197
6.7.5	Graphene for ultrafast electronics	202
6.7.6	Model for design of the nanocomponents	208
6.8	Future directions	209
	Acknowledgments	210
	References	210
7	Flat panel displays	213
7.1	Introduction	213
7.2	The emergence of flat panel displays	213
7.2.1	The dominance of the cathode ray tube (CRT)	213
7.2.2	The rise of LCDs	214
7.3	New technologies for flat panel displays	219
7.3.1	Field emission displays (FEDs)	219
7.3.2	Organic light emitting displays (OLEDs)	221
7.3.3	Electrophoretic displays	223
7.3.4	Quantum dot light emitting diode (QDLED) displays	224
7.4	Displays as an intuitive human interface	224
7.5	Conclusions	226
	Acknowledgments	227
	References	227
8	Manufacturing and open innovation	229
8.1	Introduction	229
8.2	Commercialization of nanotechnologies	229
8.3	New models of innovation	230
8.3.1	From closed to open innovation	230
8.3.2	Possible project partners	232
8.3.3	Forms of collaboration	236
8.3.4	Processes related to OI	238
8.3.5	OI and nanotechnologies	241
8.4	New configurations of manufacturing capabilities	243
8.4.1	Manufacturing and mobile communications	243
8.5	Conclusions	246
	References	247
