Contents

List of contributors page ix  Preface page xi

1: BIOLOGY OF THE LAND CRABS: AN INTRODUCTION  page 1
   Warren W. Burggren and Brian R. McMahon
   1. Why study land crabs?  1
   2. Defining a “land” crab  2
   3. The scope and coverage of Biology of the land crabs  4

2: EVOLUTION, SYSTEMATICS, AND GEOGRAPHICAL DISTRIBUTION  6
   Richard G. Hartnoll
   1. Introduction  7
   2. Levels of terrestrial adaptation  9
   3. Systematic account  11
   4. Phylogeny and evolution of land crabs  47
   5. Conclusions  53

3: ECOLOGY  55
   Thomas G. Wolcott
   1. Introduction  55
   2. Interactions with the physical environment: “limiting factors”  58
   3. Interactions with the biotic environment  65
   4. Competition for food and habitat  75
   5. Reproductive ecology  79
   6. Growth and longevity  88
   7. Role of land crabs in food chains: predators and human exploitation  90
   8. Effects of land crabs on environment  94
Table of Contents

9: Directions for future research in land crab ecology

4: Behavior
David W. Dunham and Sandra L. Gilchrist
1. Introduction
2. Feeding behavior
3. Grooming by non-ocypodid crabs
4. Reproductive behavior
5. Agonistic and resource-related behaviors
6. Acoustic display
7. Locomotory behavior
8. Orientation
9. Summary and conclusions

5: Reproduction and Development
Rita G. Adiyodi
1. Introduction
2. Breeding seasons of land crabs
3. Programming of reproduction and molt
4. Sexual differentiation, sexual maturation, and mating
5. Reproduction in the female
6. Reproduction in the male
7. Development
8. Conclusions

6: Growth and Molting
Richard G. Hartnoll
1. Introduction
2. Molting in land crabs
3. Patterns of growth
4. Relative growth
5. Autotomy and regeneration
6. Conclusions

7: Ion and Water Balance
Peter Greenaway
1. Introduction
2. Water balance
3. Osmotic and ionic regulation
4. General discussion and evolutionary implications

Contents
Contents

8: RESPIRATION

Brian R. McMahon and Warren W. Burggren

1. Introduction 249
2. Structure of gas exchange organs 250
3. Ventilatory mechanisms 257
4. Gas exchange and metabolic rate 263
5. Ventilatory control mechanisms 265
6. Oxygen transport by hemolymph 266
7. Carbon dioxide transport by hemolymph 274
8. Hemolymph acid–base balance 275
9. Respiratory compensation for environmental change 278
10. Ecological physiology of land crabs and the evolution of air breathing 283

9: CIRCULATION

Warren W. Burggren and Brian R. McMahon

1. Introduction 298
2. Cardiovascular morphology 299
3. Cardiovascular physiology 313
4. Gravity: a circulatory “problem” with terrestrial life 328
5. Conclusions 330

10: ENERGETICS AND LOCOMOTION

Clyde F. Herreid II and Robert J. Full

1. Introduction 334
2. Feeding 334
3. Digestive system 337
4. Metabolism 345
5. Animal energetics 353
6. Locomotion 357
7. Energy budgets 375
8. Conclusion 376

11: EPILOGUE

Brian R. McMahon and Warren W. Burggren

APPENDIX: Natural histories of selected terrestrial crabs 382
