

CONTENTS

Chapter I

INTRODUCTION

1. GENERAL REMARKS	<i>page</i> 1
2. INTRODUCTION TO LINE SPECTRA	2
<i>a.</i> Characteristics of Line Spectra	2
<i>b.</i> Energy Level Diagrams	8
<i>c.</i> Metastable States	10
<i>d.</i> Notion of Mean Life of an Excited State	10
3. REMARKS ON FLUORESCENCE	11
4. QUALITATIVE INVESTIGATIONS OF RESONANCE RADIATION AND LINE FLUORESCENCE	14
<i>a.</i> Resonance Radiation	14
<i>b.</i> Resonance Radiation and Line Fluorescence	16
5. SOURCES FOR EXCITING RESONANCE RADIATION	20
<i>a.</i> Arcs without Foreign Gas	21
<i>b.</i> Arcs with Stationary Foreign Gas	22
<i>c.</i> Arcs with Circulating Foreign Gas	25
6. RESONANCE LAMPS	28
7. RESONANCE RADIATION AND SPECULAR REFLEC- TION IN MERCURY VAPOUR	31
8. HYPERFINE STRUCTURE OF LINE SPECTRA	34
9. INVESTIGATIONS ON THE HYPERFINE STRUCTURE OF RESONANCE RADIATION	39

Cambridge University Press

978-0-521-11482-0 - Resonance Radiation and Excited Atoms

CONTENTS

Chapter II

PHYSICAL AND CHEMICAL EFFECTS CONNECTED WITH RESONANCE RADIATION

1. STEPWISE RADIATION	<i>page</i> 44
<i>a.</i> Mercury	44
<i>b.</i> Effect of Admixture of Foreign Gases	47
<i>c.</i> The Appearance of the Forbidden Line 2656 ($6^1S_0-6^3P_0$)	52
<i>d.</i> The Hyperfine Structure of Stepwise Radiation	52
<i>e.</i> Cadmium and Zinc	54
2. PRODUCTION OF SPECTRA BY COLLISION WITH EXCITED ATOMS: SENSITIZED FLUORESCENCE	56
<i>a.</i> The Principle of Microscopic Reversibility	56
<i>b.</i> Efficiency of Collisions of the Second Kind between Atoms and Electrons	57
<i>c.</i> Collisions of the Second Kind between Two Atoms	59
<i>d.</i> Sensitized Fluorescence	59
<i>e.</i> Effect of Metastable Atoms	65
<i>f.</i> Efficiency of Collisions of the Second Kind between Atoms	66
<i>g.</i> Conservation of Spin Angular Momentum in Collisions of the Second Kind	69
3. INTERACTION OF EXCITED ATOMS WITH MOLECULES. CHEMICAL REACTIONS TAKING PLACE IN THE PRESENCE OF OPTICALLY EXCITED ATOMS; SENSITIZED BAND FLUORESCENCE	71
<i>a.</i> Introduction	71
<i>b.</i> Reactions taking place in the Presence of Excited Mercury Atoms	71
<i>c.</i> The Mechanism of the Activation of Hydrogen by Excited Mercury Atoms	76
<i>d.</i> Reactions involving Hydrogen	81
<i>e.</i> The Sensitized Formation of Ozone	82
<i>f.</i> The Sensitized Decomposition of Ammonia	83
<i>g.</i> Other Decompositions sensitized by Excited Mercury Atoms	85
<i>h.</i> Reactions sensitized by other Metallic Vapours activated by the Absorption of Resonance Radiation	86
4. BANDS CONNECTED WITH RESONANCE LINES	87
<i>a.</i> Mercury-Rare Gas Bands	87
<i>b.</i> Continua apparently associated with Resonance Lines	88

CONTENTS xi

Chapter III

ABSORPTION LINES AND MEASURE-
MENTS OF THE LIFETIME OF THE
RESONANCE STATE

1. GENERAL PROPERTIES OF ABSORPTION LINES	<i>page</i> 92
<i>a.</i> The Notion of an Absorption Line	92
<i>b.</i> The Einstein Theory of Radiation	93
<i>c.</i> The Relation between <i>f</i> -value and Lifetime	96
2. THE ABSORPTION COEFFICIENT OF A GAS	97
<i>a.</i> Expression for the Absorption Coefficient	97
<i>b.</i> Characteristics of an Absorption Line with a Small Natural Damping Ratio	101
<i>c.</i> The Central Region of the Line	102
<i>d.</i> The Edges of the Line	103
3. EMISSION AND DIFFUSION OF RESONANCE RADIATION	106
<i>a.</i> Emission Characteristics of a Resonance Lamp	106
<i>b.</i> Methods of Measuring Lifetime	110
<i>c.</i> Resonance Lamp with Electrical Cut-Off	110
<i>d.</i> Resonance Lamp with Optical Cut-Off	111
<i>e.</i> Atomic Ray Optically Excited	114
<i>f.</i> Canal Ray	115
<i>g.</i> Absolute Intensity of a Resonance Line	115
4. ABSORPTION WITHIN AND AT THE EDGES OF A RESONANCE LINE	116
<i>a.</i> Area under the Absorption Coefficient	116
<i>b.</i> Absorption Coefficient at the Centre of a Resonance Line	117
<i>c.</i> Method of Ladenburg and Reiche	118
<i>d.</i> Method in which $E_\nu = C \exp - \left(\frac{\omega}{\alpha}\right)^2$	121
<i>e.</i> Measurements on Simple Lines	123
<i>f.</i> Absorption of a Number of Separate Simple Lines of Different Intensities	124
<i>g.</i> Absorption of a Line with Overlapping Components	126
<i>h.</i> Absorption of a Gas in a Magnetic Field	127
<i>i.</i> Absorption Coefficient at the Edges of a Resonance Line	128
<i>j.</i> Total Energy Absorbed from a Continuous Spectrum by a Resonance Line that is not Completely Resolved	130

xii	CONTENTS	
5.	MAGNETO-ROTATION AT THE EDGES OF A RESONANCE LINE	page 133
<i>a.</i>	Magneto-Rotation at the Edges of a Resolved Resonance Line	133
<i>b.</i>	Magneto-Rotation and Absorption of a Resonance Line that is not Completely Resolved	135
6.	DISPERSION AT THE EDGES OF A RESONANCE LINE	139
<i>a.</i>	General Dispersion Formula	139
<i>b.</i>	Normal Dispersion of an Unexcited Gas very far from the Absorption Lines	140
<i>c.</i>	Anomalous Dispersion of an Unexcited Gas at the Edges of a Resonance Line	141
<i>d.</i>	Anomalous Dispersion of a Strongly Excited Gas at the Edges of the Absorption Lines λ_{kj}	144
7.	TABLES OF LIFETIMES AND DISCUSSION	145
<i>a.</i>	Summary of Methods of Measuring Lifetime and Tables of Lifetimes	145
<i>b.</i>	Discussion of Tables	146
<i>c.</i>	Electron Excitation Functions	149
<i>d.</i>	The Pauli-Houston Formula	150
<i>e.</i>	Higher Series Members of the Alkalies	151

Chapter IV

COLLISION PROCESSES INVOLVING
EXCITED ATOMS

1.	TYPES OF COLLISION PROCESSES	154
<i>a.</i>	The Meaning of “Collision”	154
<i>b.</i>	The Meaning of “Effective Cross-Section”	155
<i>c.</i>	Collisions of the Second Kind	156
<i>d.</i>	Perturbing Collisions	156
2.	CLASSICAL THEORY OF LORENTZ BROADENING OF AN ABSORPTION LINE	158
<i>a.</i>	The Phenomenon of Lorentz Broadening	158
<i>b.</i>	The Simple Lorentz Theory	159
<i>c.</i>	Combination of Lorentz, Natural, and Doppler Broadening	160

CONTENTS		xiii
3.	EXPERIMENTS ON LORENTZ BROADENING	<i>page</i> 162
a.	Photographic Measurements	162
b.	Measurements involving Magneto-Rotation	164
c.	Experiments on the Absorption of Resonance Radiation	165
d.	Evaluation of Effective Cross-Sections for Lorentz Broadening	170
e.	Lorentz Broadening in a Sodium Flame	170
f.	The Shift of the Absorption Line	174
g.	The Asymmetry in Broadening	174
4.	QUANTUM THEORY OF LORENTZ BROADENING	175
a.	Preliminary Theories	175
b.	Weisskopf's Theory	177
c.	Lenz's Theory	179
5.	HOLTSMARK BROADENING	183
6.	EARLY MEASUREMENTS OF THE QUENCHING OF RESONANCE RADIATION	187
a.	Quenching of Resonance Radiation by Foreign Gases	187
b.	Experiments of Stuart with Mercury	188
c.	Experiments with Sodium and Cadmium	189
d.	Difficulty of interpreting Early Experiments	190
7.	THEORY OF THE QUENCHING CURVE FROM AN IDEAL RESONANCE LAMP	191
a.	The Stern-Volmer Formula	191
b.	Effect of Lorentz Broadening on Quenching	193
8.	RADIATION DIFFUSION AND QUENCHING	196
a.	Milne's Theory	196
b.	Use of Milne's Theory to study Quenching	197
c.	Equivalent Opacity at Low Pressure	200
d.	Derivation of a Theoretical Quenching Curve	201
e.	Experimental Determinations of Quenching Cross-Sections	202
9.	COLLISIONS OF EXCITED ATOMS PRODUCED BY OPTICAL DISSOCIATION	204
a.	The Optical Dissociation of NaI	204
b.	Experimental Results	205
c.	Evaluation of Effective Cross-Sections	206
10.	OTHER COLLISION PROCESSES	213
a.	Collisions involving the Sodium Transition $^2P_{\frac{1}{2}, \frac{3}{2}} \rightarrow ^2P_{\frac{3}{2}, \frac{1}{2}}$	213
b.	Collisions connected with Photo-ionization	215
c.	Collisions involving the Enhancement of Spark Lines	217

xiv	CONTENTS	
11.	THEORETICAL INTERPRETATION OF QUENCHING COLLISIONS	<i>page</i> 218
a.	General Principles	218
b.	Enhancement of Copper and Aluminium Ionic Levels	220
c.	Energy Interchange with Molecules	221
d.	Collisions with Excited Mercury Atoms	223
e.	Collisions with Excited Cadmium Atoms	225
f.	Collisions with Excited Sodium Atoms	226
g.	Collisions with Excited Thallium Atoms	228
12.	RAPIDITY OF ESCAPE OF DIFFUSED RESONANCE RADIATION FROM A GAS	228
a.	Experiments with Mercury Vapour at Low Pressures	228
b.	Milne's Theory	230
c.	Experiments with Mercury Vapour at Higher Pressures	232
d.	Equivalent Opacity at High Pressure	233
13.	DIFFUSION AND COLLISIONS OF METASTABLE ATOMS	236
a.	Early Work	236
b.	Theory of Measurement with Inert Gases	237
c.	Experimental Results with Neon, Argon, and Helium	240
d.	Theoretical Interpretation of Results with Inert Gases	245
e.	Methods of studying Metastable Mercury Atoms in Nitrogen	250
f.	Results and their Interpretation with Metastable Mercury Atoms in Nitrogen	252
g.	Metastable Mercury Atoms in Mercury Vapour	253
h.	The Simultaneous Production and Destruction of Metastable Atoms	254

Chapter V

THE POLARIZATION OF RESONANCE RADIATION

1.	INTRODUCTION	258
2.	GENERAL DESCRIPTION OF APPARATUS FOR POLARIZATION WORK	258
3.	HANLE'S EXPERIMENTS ON MERCURY VAPOUR	262

CONTENTS		xv
4.	THEORY OF HANLE'S EXPERIMENTS	<i>page</i> 264
a.	Classical Theory	264
b.	Quantum Theory of Polarization and the Zeeman Effect	267
5.	EXPERIMENTAL VERIFICATION OF MAGNETIC DEPOLARIZATION AND ANGLE OF MAXIMUM POLARIZATION IN THE CASE OF MERCURY	270
6.	POLARIZATION OF SODIUM RESONANCE RADI- TION: BREAKDOWN OF CLASSICAL THEORY	272
a.	Experimental Results on the Polarization of Sodium Resonance Radiation	272
	The Zeeman Levels for Sodium; Van Vleck's Formulas for Polarization	272
c.	Further Comparison of Experiment with Theory	276
7.	POLARIZATION OF LINES OF OTHER ELEMENTS: MEAN LIVES OF SEVERAL EXCITED STATES	278
a.	Resonance Lines	278
b.	Line Fluorescence	280
8.	EFFECT OF HYPERFINE STRUCTURE ON THE POLARIZATION OF RESONANCE RADIATION	283
a.	Detailed Experimental Investigation of the Polarization of Mercury Resonance Radiation	283
b.	Theory of the Effect of Hyperfine Structure on the Polarization of Resonance Radiation	285
c.	Theory of the Effect of Hyperfine Structure on the Polarization of Line Fluorescence	290
d.	Comparison of Experiment with Present Theory of Polarization	291
e.	Effect of Hyperfine Structure on Magnetic Depolarization and the Angle of Maximum Polarization	296
f.	Effect of Large Magnetic Fields; Paschen-Back Effect of Hyperfine Structure	301
9.	STEPWISE RADIATION	304
a.	Polarization of Stepwise Radiation	304
b.	Mean Life of the 7^3S_1 State of Mercury	307
10.	DEPOLARIZATION BY COLLISION	308
11.	EFFECT OF ELECTRIC FIELDS ON RESONANCE RADIATION	312
a.	Measurements on Frequency (Stark Effect)	312
b.	Measurements on Polarization	314

xvi	CONTENTS
	APPENDIX
I. Absorption Coefficient of a Gas	page 319
II. Value of $\frac{a}{\pi} \int_{-\infty}^{\infty} \frac{e^{-y^2} dy}{a^2 + (\omega - y)^2}$ for small values of a	321
III. Line Absorption A_L	322
IV. The Absorption A_a	323
V. The Function S	324
VI. The Absorption $A'_{k_0 l'}$	324
VII. Kuhn's Theory of Magneto-Rotation	325
VIII. Effect of Hyperfine Structure on the Value of χ_ν	327
IX. Value of $\frac{a'}{\pi} \int_{-\infty}^{\infty} \frac{e^{-y^2} dy}{a'^2 + (\omega - y)^2}$ for large values of a'	328
X. Diffused Transmitted Resonance Radiation	330
XI. Samson's Equivalent Opacity	330
XII. Kenty's Equivalent Opacity	331
XIII. Polarization of Resonance Radiation excited by Unpolarized Light	331
INDEX	335
