

INDEX

- Abelson, Philip
 discovery of neptunium, 100–102
 finding of first transuranic, 96
- Aberdeen Proving Ground (Maryland), 147
- active material, of atom bomb, 249–251
- Alamogordo bombing range (Jornada del Muerto), 152
- allotropism, 108
- alpha particles, 18, 19
 artificial isotopes of, 43
 decay of, 193, 198–203
 and decay of plutonium, 144
 description of, 193, 194–195, 198–203
 emission by polonium, 133
 Gamow's barrier penetration theory, 203
 and induction of gamma radiation, 26
 quantum point of view of, 195
- ALSOS missions, 229, 231, 238, 251
- Anderson, Carl, 196
- Anderson, Herbert, 74
- anti-particle. *See* positrons (anti-particle)
- Ardenne, Manfred von, 228
 invention of form of calutron, 202
 paper on plutonium-239, 202
 shipped to Soviet Union by Russia, 202, 260
- Argus explosion project, 176, 177
- Aston, Francis, 199
 awarding of Nobel Prize, 32
- isotope separation work, 31–32
 isotope stability detection work, 30–31
- Atkinson, Robert, 203–204
- Atlantic* magazine, 7
- atomic bomb
 effect on Hiroshima, 4–5
 German program, 26, 49
 Urchin type initiator, 248–249
 work of Chadwick, 24–25
- atomic model, of Thomson, 16, 23
- atomic quantum theory formulation, 18, 23, 50
- atomic weight, 93
- Bainbridge, Kenneth, 123
- barium, 50
 as fission fragment, 71
 and Hahn's uranium experiments, 46
 isotopes of, 72
 Strassmann's discovery of, 72, 280
- Becker, Herbert, 25
- Bell, John, 80
- Ben-Gurion, David, 275–277
- Bernstein, Jeremy
 employment at Brookhaven, 177
 employment at Harvard cyclotron, 157
 employment at Institute of Advanced Studies, 158

288 • Index

- Bernstein, Jeremy
 Galileo test observation, 168
 interaction with Adlai Stevenson, 185–186
 internship at Los Alamos, 159
 Smoky test observation, 162–168
- beryllium, 26, 65, 215–216
 around uranium sphere, 269
 in initiator, 248
 Serber's use of, 151
- beta decay
 of neptunium-239, 102
 theory of, 33, 196, 204
 of uranium-239 isotope, 139
- Bethe, Hans
 arguments against Teller's proposal, 122
 collaboration with Teller, 208–210
 German reactor plan meeting, 237–238
 nuclear physics review articles, 39
 stellar energy work, 205–207, 208–210
 work on “classical super,” 210
- Bhutto, Benazir, 271
- Bhutto, Zulifkar Ali, 265–266
- binding energy, 27, 203
 curve of, 203
 for helium-3, 57
 for uranium-239, 57–58
- Birmingham University, 79
 employment of Frisch, 75
 employment of Peierls, 78–79
 Oliphant's department chairmanship, 79
- Bohr, Aage, 237
- Bohr, Neils
 atomic quantum theory formulation, 18, 23, 50
 awarding of Nobel Prize, 129
 epiphany of, 56
 German reactor plan meeting, 237–238
 invitation to Gamow, 191
 and nucleus liquid-drop model, 47–49, 191
 quantitative fission theory, 55
 reaction to uranium nucleus fissioning, 39
 Bohr's orbits, 50
- Böhtlingk, Otto, 94
- bomb design, 5
 misunderstandings/misconceptions, 6–7
 Ulam-Teller/Teller-Ulam, of hydrogen bomb, 218
- bombings
 of Hiroshima, 4–5, 55, 83
 Oklahoma City, 4–5
 Tokyo, 4–5
- Bothe, Walter, 230, 231
 alpha-particle element bombardment, 25
 work on graphite moderator, 110–111
- bound electron-proton model, 27, 49, 50, 199
- Briggs, Lyman, 88
- British Atomic Energy Research Establishment, 87
- Brookhaven Laboratories, 177
- Bush, George W., 277–278
- calutron. *See* mass spectrometry
- “Can Terrorists Build Nuclear Weapons?”
 article (Mark and Taylor), 256, 257–258
- carbon, neutron-proton nuclear equality, 71
- cathode rays
 discovery by Crooks, 13–14
 and negatively charged particles, 15
- centrifuge work, of Sochumi detainees, 261–262. *See also* Zippe centrifuges
- Chadwick, James
 atom bomb work, 24–25
 awarding of Nobel Prize, 28, 129
 discovery of neutron, 25–28, 43
 World War II German internment, 25
- chain reactions, 55–67
 self-sustaining nature of, 77–78
- Chemical Society Annual Report (1913), 28
- China
 and aboveground testing, 4
 deal making with Khan, 266
 hydrogen bomb explosion, 223
 number of nuclear weapons, 274
- Christofilos, Nicholas
 artificial Van Allen Belt creation, 175–176
 particle acceleration scheme, 175
- Christy, Robert, 145–146

Index • 289

- Christy gadget, 145–146, 150–151
 “classical super” weapon, 210–211,
 213–214, 219–221
 Clusius, Klaus, 76–77, 82
 Cockroft, John, 236
 Columbia University, 73, 75
 compound nucleus
 of uranium-235, 57
 of uranium-236, 58
 of uranium-238, 57
 Comprehensive Test Ban Treaty, 186
 Compton, Arthur, 105
 Conant, James, 114, 124
 Condon, E. U., 123, 193
 Corbino, Orso, 34
 Coster, Dirk, 45
 aid for Meitner’s escape from Germany,
 45
 Cowpuncher Committee, 151
 Critchfield, Charles, 205–207
 critical mass, 77–78. *See also* supercritical mass
 Frisch/Peierl’s estimations, 82–87
 for plutonium, 142
 Serber’s calculations, 125–126
 Crookes, William, 13–14
 crude weapons, making of, 258
 crystallography, 107–109
 Curie, Irène, 26, 43
 cyclotron(s)
 Abelson/McMillan’s utilization of, 96
 Bothe’s building of, 25–26
 at Harvard, 99, 157
 of Joliot, in Paris, 230
 Lawrence’s involvement with, 96–98
 limitations in, 98
 McMillan’s work with, 98–103
 and neutron flux, 139

Dark Sun (Rhodes), 8
 “death rays,” 81
 delayed neutrons, 71
 deuterium
 fusion with deuterium, 212
 and hydrogen bombs, 208
 mixture with tritium, 209, 215, 216–218

 deuteron
 binding energy of, 51
 irradiation of uranium-238, 103
 as nucleus of heavy hydrogen, 98
 pick up process, 99
 produced by fusion, 196
 reaction with deuteron, 212–221
 size of, 197
 stripping of, 98
 Dickel, Gerhard, 76
 Diebner, Kurt, 229, 230
 Dimona reactor (Israel), 269
 “Divergent Chain Reactions in Systems
 Composed of Uranium and Carbon”
 (Szilard), 111
Dr. Strangelove movie, 3–4, 176
 Dyson, Freeman, 7, 80, 157–158

 Eddington, Arthur
 “Internal Constitution of the Stars” address,
 198
 stellar energy work of, 198–199
 Edgerton, Harold Eugene, 170–171, 178–
 179
 Einstein, Albert, 61
 awarding of Nobel Prize, 30
 gedanken (thought) experiments of,
 128–129
 gravitation theory, 27, 171, 198, 200
 letter to Belgian Ambassador, 66–67
 letters to Roosevelt, 66–67, 234
 theory of gravitation ($E = mc^2$), 27, 171,
 198
 Einsteinium, 218
 “eka” naming system, 94–96
 eka-rhenium, 100
 eka-rhenium-neptunium, 104
 electron volts, 50–51
 electrons
 and artificial Van Allen Belt creation,
 173–176
 of beryllium, 215–216
 bombardment of Aston’s device, 31
 escape from surface of metals, 193
 in helium atom, 199

290 • Index

- electrons (*cont.*)
 and noble gases, 94
 in plum pudding model, 23
 in Rutherford model, 29
 Thomson's discovery of, 16
- Ellis, Charles Drummond, 25
- Eltenton, George, 239
- ENIAC computer, 147
