TITLE INDEX

This index is intended as a supplement to the main title index in Japanese for the benefit of Western users preferring to consult a list in alphabetical order. It is not as comprehensive as the main index, for the following items are excluded: works in Western languages; Chinese and Korean texts not published in Japan; most items with provisional titles; all alternative titles. The romanized transcriptions of the titles are based where possible on the furigana glosses used in the texts themselves, otherwise on the transcriptions given in *Kokusho sōmokuroku* and other reference works. In some cases this means that the form of the title used here differs from that commonly used in the West, particularly since the *naidai* has been taken in this catalogue to be the title of first choice. The order of entries is strictly alphabetical ignoring word divisions, which in any case are somewhat artificial in transcriptions of Japanese titles; the order of entries takes no account of long vowels, so *obon* comes before *ōchō*. Capital letters have been used only for the initial word in each title. The Hepburn system of romanization has been used, with the modification adopted in the *Kenkyūsha Japanese-English Dictionary* of retaining the **n** before **m**, **p**, and **b**: hence *shinbun* rather than *shimbun*.
