**Introduction: Overview
and purpose** xxv
Origins
Content
Relevance
Definitions

**Section 1: Paradigms of
international policies** 1

1 Donor led policies: analysis
of an underlying doctrine 3
2 The Achilles heel of international
health policies in low- and
middle-income countries 16

**Section 2: The failure of the aid
paradigm: poor disease control
in developing countries** 35

3 Why do disease-control programmes
require patients in health services
to succeed in delivering? The case of
malaria control in Mali 37
4 How do disease-control
programmes damage health
care delivery in developing
countries? 48
5 Privatization (PPM-DOTS) strategy
for tuberculosis control: how
evidence-based is it? 57

**Section 3: Impact of
international health policies
on access to health in
middle-income countries:
some experiences from
Latin America** 67

6 Costa Rica: achievements of a
heterodox health policy 69
7 Colombia: in vivo test of health
sector privatization in the
developing world 83
8 Chile's neoliberal health reform: an
assessment and a critique 97

**Section 4: Determinants and
implications of new liberal
health policies: the case of
India, China and Lebanon** 107

9 Political and economic determinants
of health care systems: the case
of India 109
10 An economic insight into health care
provision in six Chinese counties:
equity in crisis? 123
11 Health care financing and delivery in
the context of conflict and crisis: the
case of Lebanon 138

vi	Contents
	Section 5: Principles for alternative, publicly oriented health care policies, planning, management and delivery 153
12	Paradigm shifts in the health sector: mission and methods 155 Part 1: The need to alter health systems' missions to deliver comprehensive care Part 2: The need for a methodological shift to determine priorities in health policies
13	Principles for an alternative, social and democratic health policy 164
14	Quality standards for health care delivery and management in publicly oriented health services 176
15	Principles of publicly oriented health planning 184
16	A code of good practice for the management of disease-control programmes 195
	Section 6: A public health, strategic toolkit to implement these alternatives 199
17	Person-centred care: a key to strengthening health care and systems in low- and middle-income countries 201
18	Improving access 210 Part 1: Access to curative care in first-line health services: an experience in Ecuador Part 2: Improving access to drugs in publicly oriented services: an experience in Senegal
19	Improving clinical decision making 225 Part 1: Non-managed care techniques to improve clinical practice Part 2: Interface flow process audit. The patient's career as tracer of quality of care and system: an experience from Belgium
20	Reorienting academic missions: how can public health departments and public health teaching in particular best support access to good quality comprehensive health care? 240
