List of contributors xii

Preface: Julia M. Polak xvi

Section I Nitric oxide and cytokines – an introduction 1

1 A brief overview of the biology of nitric oxide 3
Patrick Vallance and Salvador Moncada

1.1 Introduction 3
1.2 Synthesis of NO 3
1.3 Expression of NOS isoforms 4
1.4 Targets for NO 5
1.5 NO transport 6
1.6 Conclusions 6
References 6

2 Nitric oxide and immune responses 8
Iain B. McInnes and Foo Y. Liew

2.1 Introduction 8
2.2 NOS isoforms 8
2.3 Regulation of NOS during immune responses 9
2.4 NO in early inflammation 12
2.5 Effects of NO on T cell activation 12
2.6 Effects of NO on cytokine production 13
2.7 NO and immune responses *in vivo* 13
2.8 Conclusions 16
References 17

3 Bone biology and pathophysiological mechanisms of bone disease 21
R. Graham G. Russell, Peter Croucher, Babatunde Oyajobi, Shamim Rahman, Michael Rogers and Andrew Scutt

3.1 Introduction 21
3.2 Bone cell differentiation and function 22
3.3 Potential regulatory factors 27
3.4 Factors affecting the action of cytokines and growth factors 34
3.5 Some specific aspects of the regulation of bone and cartilage metabolism in health and disease 34

3.6 Prospects for the future 36
Further reading 37

Section II Nitric oxide in arthritis 39

4 Nitric oxide and blood flow in athritis 41
John C. Lockhart, Lorraine McMurdo and William R. Ferrell
4.1 Introduction 41
4.2 Sites of NO release in the joint 42
4.3 Regulation of synovial blood flow 42
4.4 NO modulation of sympathetic-mediated vasoconstriction 45
4.5 Effects of inflammation on synovial reactivity 47
4.6 Conclusions 49
References 50

5 Nitric oxide production in human inflammatory arthritides 53
Nobuyuki Miyasaka and Yukio Hirata
5.1 Introduction 53
5.2 Urinary NO metabolite excretion 54
5.3 Serum NO metabolite levels 54
5.4 NO production by peripheral blood mononuclear cells 54
5.5 Synovial fluid NO metabolite levels 55
5.6 NO production by synovial tissue 55
5.7 Significance of NO production in rheumatoid arthritis 56
5.8 Conclusions 58
References 58

6 Effects of nitric oxide synthase inhibitors in experimental models of arthritis 61
Christopher H. Evans and Maja Stefanovic-Racic
6.1 Introduction 61
6.2 NO production in arthritis 61
6.3 Role of NO in arthritis pathophysiology 65
6.4 Effects of NOS inhibitors in animal models of arthritis 65
6.5 Conclusions 67
References 68

7 Nitric oxide and prostaglandin interactions in acute and chronic inflammation 70
Daniela Salvemini
7.1 Introduction 70
7.2 NO, prostaglandins and inflammation 71
7.3 Activation of COX-2 by NO: discovery 73
7.4 Activation of COX-2 by NO: implications in acute and chronic inflammation 74
7.5 Perspectives of NO-driven COX interactions in inflammation 75
7.6 Conclusions 76
References 78

Table of Contents
More information

8 The complex influences of reactive oxygen species on rheumatoid erosions and synovitis 81
Janos M. Kanczler, Tulin Sahinoglu, Cliff R. Stevens and David R. Blake

8.1 Introduction 81
8.2 Where do erosions develop? 81
8.3 Erosions, symmetry and the nervous system 82
8.4 Movement and erosions 82
8.5 Erosions and threrapy 82
8.6 A question of balance 84
8.7 Multiple mediators of bone resorption: a recipe for chaos? 84
8.8 What is unique about the environment within the inflamed joint? 87
8.9 How might hypoxia affect bone resorption? 87
8.10 How oxidants affect biological systems 89
8.11 The environment of resorbing bone 90
8.12 Radicals, hypoxia and bone resorption 90
8.13 Bone-derived reactive oxygen species 91
8.14 NO 92
8.15 The peroxynitrite factor 92
8.16 Coupling/uncoupling 93
References 94

9 Nitric oxide and cartilage matrix turnover 95
Min Cao, Hans-Jorg Häuselmann, Maja Stefanovic-Racic and Christopher H. Evans

9.1 Introduction 95
9.2 NO production by cartilage 95
9.3 Effects of NO on cartilage matrix turnover 96
9.4 Effects of NO on chondrocyte metabolism 97
9.5 Production of NO in arthritis 98
9.6 Conclusions 99
References 99

Section III Nitric oxide, bone cell function and osteoporosis 103

10 Nitric oxide and osteoblast function 105
Francis J. Hughes, Lee D. K. Buttery, Mika V. J. Hukkanen and Julia M. Polak

10.1 Introduction 105
10.2 NO production in osteoblasts 107
10.3 Effects of NO on osteoblast metabolism 109
10.4 Potential molecular targets for the action of NO in osteoblasts 110
10.5 Conclusions 112
References 113

11 Nitric oxide as a mediator of cytokine effects on bone 116
Stuart H. Ralston

11.1 Introduction 116
11.2 Expression of NOS isoforms in bone and bone-derived cells 116
11.3 Regulation of NOS expression in bone 117
11.4 Effects of NO on bone cell function 117
11.5 Clinical relevance of NO in bone diseases 119
References 120

12 The osteoclast, bone homeostasis and postmenopausal osteoporosis 122
Lucia Mancini, Niloufar Moradi-Bidhendi and Iain MacIntyre

12.1 Introduction 122
12.2 Osteoclast activity is a cyclic phenomenon 122
12.3 Functions of NO in the osteoclast cycle 123
12.4 Functions of NO *in vivo* 124
References 125

Section IV Nitric oxide and mechanical factors 127

13 Modulation of bone blood flow by nitric oxide 129
Ian D. McCarthy

13.1 Introduction 129
13.2 NO in local control of bone blood flow 129
13.3 The role of the microcirculation in bone physiology 133
13.4 Pathophysiology of microcirculation in bone 136
13.5 Conclusions 138
References 139

14 Fluid shear stress 141
Todd N. McAllister and John A. Frangos

14.1 Introduction 141
14.2 Fluid flow in bone 142
14.3 Mechanisms of flow-mediated remodelling 143
14.4 Streaming potentials 144
14.5 Mechanochemical signal transduction 145
14.6 Hormonal control 145
14.7 Sensitivity to different flow parameters 146
14.8 Mechanical strain versus fluid flow 147
14.9 Conclusions 147
References 147

15 Mechanical strain-associated nitric oxide production by bone cells 151
Andrew A. Pitsillides and Lance E. Lanyon

15.1 Mechanically induced adaptive responses in bone 151
15.2 The analogy with endothelium 152
15.3 Analogies between the development of neuronal long-term potentiation/depression and the 'strain memory' concept 153
15.4 Do mechanical stimuli result in NO production by bone cells? 154
15.5 How are load-related NO and prostaglandin production related? 159
15.6 Do non-load-bearing bones release NO in response to loading? 160
15.7 Which bone cells are responsible for NO production? 160
15.8 Conclusions 164
References 165

16 The response of bone and bone cells to mechanical stimulation 169
Tim J. Chambers, Jade W. M. Chow, Simon Fox, Ron L. Howard, Christopher J. Jagger, Jenny M. Lean, Frederick T. Mitchell and Rolf Smalt

16.1 Introduction 169

16.2 Response of bone to mechanical stimulus 170
16.3 Molecular basis 170
16.4 The role of prostaglandins 172
16.5 NO and the osteogenic response 173
16.6 The role of mechanical strain 174
16.7 The role of fluid flow 174
16.8 Mechanical strain, fluid flow, NO and prostaglandins 175
16.9 Conclusions 176
References 176

17 Aseptic loosening of total hip prostheses 178
Steven A. Corbett, Mika V. J. Hukkanen, Sean P. F. Hughes and Julia M. Polak
17.1 Introduction 178
17.2 Pseudomembrane 179
17.3 Wear debris 179
17.4 Cytokines and NO 180
17.5 iNOS and COX-2 in aseptic loosening 181
17.6 Proposed model 182
17.7 Future development 182
