Behavior Dynamics in Media-Sharing Social Networks

In large-scale media-sharing social networks, where millions of users create, share, link, and reuse media content, there are clear challenges in protecting content security and intellectual property, and in designing scalable and reliable networks capable of handling high levels of traffic.

This comprehensive resource demonstrates how game theory can be used to model user dynamics and optimize design of media-sharing networks. It reviews the fundamental methodologies used to model and analyze human behavior, using examples from real-world multimedia social networks. With a thorough investigation of the impact of human factors on multimedia system design, this accessible book shows how an understanding of human behavior can be used to improve system performance.

Bringing together mathematical tools and engineering concepts with ideas from sociology and human behavior analysis, this one-stop guide will enable researchers to explore this emerging field further and ultimately design media-sharing systems with more efficient, secure, and personalized services.

H. Vicky Zhao is an Assistant Professor in the Department of Electrical and Computer Engineering at the University of Alberta. The recipient of the IEEE Signal Processing Society Young Author Best Paper Award 2008, she is an Associate Editor for the *IEEE Signal Processing Letters* and the *Journal of Visual Communication and Image Representation*.

W. Sabrina Lin is a Research Associate in the Department of Electrical and Computer Engineering at the University of Maryland. She received the University of Maryland Future Faculty Fellowship in 2007.

K. J. Ray Liu is a Distinguished Scholar-Teacher of the University of Maryland, where he is Christine Kim Eminent Professor in Information Technology. He received the IEEE Signal Processing Society Technical Achievement Award in 2009, and was Editor-in-Chief of the *IEEE Signal Processing Magazine* and the founding Editor-in-Chief of the *EURASIP Journal on Advances in Signal Processing*.

Contents

	<i>Preface</i>	<i>page xi</i>
Part I	Introduction	1
1	Introduction to media-sharing social networks	3
	1.1 Quantitative analysis of social networks	5
	1.2 Understanding media semantics in media-sharing networks	10
2	Overview of multimedia fingerprinting	14
	2.1 Traitor-tracing multimedia fingerprinting	15
	2.2 Scalable video coding system	17
	2.3 Scalable video fingerprinting	18
3	Overview of mesh-pull peer-to-peer video streaming	24
	3.1 Mesh-pull structure for P2P video streaming	25
	3.2 User dynamics in peer-to-peer video streaming	33
4	Game theory for social networks	41
	4.1 Noncooperative and cooperative games	42
	4.2 Noncooperative games	43
	4.3 Bargaining games	50
Part II	Behavior forensics in media-sharing social networks	55
5	Equal-risk fairness in colluder social networks	57
	5.1 Equal-risk collusion	57
	5.2 Influence on the detector's side: collusion resistance	63
	5.3 Traitor-tracing capability of scalable fingerprints	75
	5.4 Chapter summary and bibliographical notes	82

6	Leveraging side information in colluder social networks	85
6.1	Probing and using side information	85
6.2	Game-theoretic analysis of colluder detector dynamics	93
6.3	Equilibrium analysis	94
6.4	Simulation results	103
6.5	Chapter summary and bibliographical notes	109
7	Risk–distortion analysis of multiuser collusion	111
7.1	Video fingerprinting	112
7.2	Risk–distortion modeling	113
7.3	Strategies with side information	117
7.4	Parameter estimation	122
7.5	Simulation results	122
7.6	Chapter summary and bibliographical notes	127
Part III	Fairness and cooperation stimulation	129
8	Game-theoretic modeling of colluder social networks	131
8.1	Multiuser collusion game	132
8.2	Feasible and Pareto optimal collusion	137
8.3	When to collude	139
8.4	How to collude: the bargaining model	150
8.5	How to collude: examples	155
8.6	Maximum payoff collusion	160
8.7	Chapter summary and bibliographical notes	167
9	Cooperation stimulation in peer-to-peer video streaming	169
9.1	Incentives for peer cooperation over the Internet	170
9.2	Wireless peer-to-peer video streaming	178
9.3	Optimal cooperation strategies for wireless video streaming	181
9.4	Optimal chunk request algorithm for P2P video streaming with scalable coding	189
9.5	Chapter summary and bibliographical notes	193
10	Optimal pricing for mobile video streaming	195
10.1	Introduction	195
10.2	System model	196
10.3	Optimal strategies for single secondary buyer	198
10.4	Multiple secondary buyers	206
10.5	Optimal pricing for the content owner	208
10.6	Chapter summary and bibliographical notes	217

Part IV	Misbehaving user identification	219
11	Cheating behavior in colluder social networks	221
	11.1 Traitors within traitors via temporal filtering	222
	11.2 Traitors within traitors in scalable fingerprinting systems	227
	11.3 Chapter summary	245
12	Attack resistance in peer-to-peer video streaming	247
	12.1 Attack-resistant cooperation strategies in P2P video streaming over the Internet	248
	12.2 Attack-resistant cooperation strategies in wireless P2P video streaming	261
	12.3 Chapter summary and bibliographical notes	273
Part V	Media-sharing social network structures	275
13	Misbehavior detection in colluder social networks with different structures	277
	13.1 Behavior dynamics in colluder social networks	278
	13.2 Centralized colluder social networks with trusted ringleaders	280
	13.3 Distributed peer-structured colluder social networks	289
	13.4 Chapter summary and bibliographical notes	306
14	Structuring cooperation for hybrid peer-to-peer streaming	308
	14.1 System model and utility function	309
	14.2 Agent selection within a homogeneous group	311
	14.3 Agent selection within a heterogeneous group	317
	14.4 Distributed learning algorithm for ESS	320
	14.5 Simulation results	320
	14.6 Chapter summary and bibliographical notes	325

Preface

In the past decade, we have witnessed the emergence of large-scale media-sharing social network communities such as Napster, Facebook, and YouTube, in which millions of users form a dynamically changing infrastructure to share multimedia content. This proliferation of multimedia data has created a technological revolution in the entertainment and media industries, bringing new experiences to users and introducing the new concept of web-based social networking communities. The massive production and use of multimedia also pose new challenges to the scalable and reliable sharing of multimedia over large and heterogeneous networks; demand effective management of enormous amounts of unstructured media objects that users create, share, link, and reuse; and raise critical issues of protecting the intellectual property of multimedia.

In large-scale media-sharing social networks, millions of users actively interact with one another; such user dynamics not only influence each individual user but also affect the system performance. An example is peer-to-peer (P2P) file sharing systems, in which users cooperate with one another to provide an inexpensive, scalable, and robust platform for distributed data sharing. Because of the voluntary and unregulated participation nature of these systems, user cooperation cannot be guaranteed in P2P networks, and recent studies showed that many users are free riders, sharing no files at all. To provide a predictable and satisfactory level of service, it is important to analyze the impact of human factors on media-sharing social networks, and to provide important guidelines for better design of multimedia systems. The area of human and social dynamics has recently been identified by the US National Science Foundation (NSF) as one of its five priority areas, which also demonstrates the importance of this emerging interdisciplinary research area.

This book, *Behavior Dynamics in Media-Sharing Social Networks*, aims to illustrate why human factors are important, to show that signal processing can be used effectively to model user dynamics, and to demonstrate how such understanding of human behavior can help improve system performance. We cover recent advances in media-sharing social networks, and study two different types of media-sharing social networks, multimedia fingerprinting and P2P live streaming social networks. We review the fundamental methodologies for modeling and analyzing human behavior, and investigate the impact of human dynamics on multimedia system design. Our goal is to encourage researchers from different areas to further explore the emerging research field of behavior modeling and forensics, to improve our understanding of user dynamics in media-sharing social

networks, and ultimately to design systems with more efficient, secure, and personalized services.

We partition the book into five parts. In Part I, we illustrate the fundamental issues of media-sharing social networks, including quantitative social network analysis and media semantics, in Chapter 1; provide overviews on multimedia fingerprinting and P2P video streaming in Chapters 2 and 3, respectively; and offer an introduction to game theory that will be used throughout the later chapters in Chapter 4.

In Part II, the focus is on user dynamics in media-sharing social networks. The notion of equal-risk fairness in multimedia fingerprinting colluder social networks is addressed in Chapter 5, followed by the study of how to leverage side information to reach a better equilibrium via game-theoretical analysis in Chapter 6. The concept of risk–distortion tradeoff is considered in Chapter 7 to understand how optimal strategies may vary and depend on decisions of both attackers and detectors.

Because of the constant user interactions in social networks, cooperation becomes a major issue. Therefore, Part III is dedicated to the consideration of cooperation stimulation with the notion of fairness. Game-theoretic models with different bargaining strategies and fairness criteria are developed in Chapter 8 to study optimal strategies of feasible attacks in multimedia fingerprinting colluder social networks. In Chapter 9, an optimal cooperation strategy of cooperative stimulation in P2P video streaming is considered, followed by the study of the optimal price setting for mobile P2P video streaming in Chapter 10.

In Part IV, we turn our attention to the identification of misbehaving users. In multimedia fingerprinting social networks, even when colluders agree on a strategy, they may not execute accordingly. Instead, for example, they may cheat to take more advantage in further minimizing their own risk. In Chapter 11, such a traitor-within-traitor phenomenon is investigated. Similarly, the presence of the malicious attack will discourage nonmalicious users to join the social network. In Chapter 12, the design of methodologies to identify hostile users and the cheat-proof cooperation strategies against malicious attacks are considered.

Finally, in Part V, the impact of social network structure on the performance of social networking is discussed. In Chapter 13, the impact of centralized social networks with trusted ringleaders and distributed peer-structured social networks on multimedia fingerprinting collusion is considered, and in Chapter 14, forming a social structure with a group lead agent is investigated for P2P streaming social networks.

This book is intended to be a reference book or textbook for graduate-level courses such as social computing and networking, image and video communications and networking, and network/information security. We hope that the comprehensive coverage and a holistic treatment of media-sharing social networking will make this book a useful resource for readers who want to understand this emerging technology, as well as for those who conduct research and development in this field.

We would like to thank Mr. Yan Chen for his research contributions that are included in this book.
