<i>Preface</i>	xiii
1 Mechanical background	1
1.1 Definitions	1
1.1.1 Stress and strain	1
1.1.2 Rheology	5
(i) Elasticity	5
(ii) Viscosity	10
(iii) Plasticity	12
1.1.3 Mechanical tests	14
(i) Stress regimes	16
(ii) Uniaxial tests: creep tests, constant strain-rate tests, stress relaxation	17
(iii) The samples	23
1.2 Constitutive relations	25
1.2.1 State variables, time, strain	25
1.2.2 Creep regimes: primary, quasi-steady-state	27
1.2.3 A mechanical equation of state	29
1.3 Stability of deformation	33
2 The agents of deformation: lattice defects	38
2.1 Generalities	38
2.2 Vacancies and diffusion	40
2.2.1 Thermodynamics	40
2.2.2 Diffusion	41
2.2.3 Diffusion in binary ionic crystals	45
(i) Vacancy concentration and diffusion regimes	45
(ii) Influence of oxygen partial pressure on diffusion in oxides	47
(iii) Transport of matter in binary ionic crystals	48
2.2.4 Short-circuit diffusion	50
(i) Pipe diffusion	50
(ii) Grain-boundary diffusion	50
2.3 Dislocations and slip	51
2.3.1 Definitions	51
2.3.2 Dislocation cores, Peierls stress and splitting	56

Table of Contents

[More information](#)

x	<i>Contents</i>	
	2.3.3 Climb of edge dislocations	58
	2.3.4 Orowan's equation	62
	2.4 Grain boundaries and recrystallization	63
	2.4.1 Definitions	63
	2.4.2 Grain-boundary dislocations	64
	2.4.3 Energy of grain boundaries	66
	2.4.4 Structure of grain boundaries	66
	2.4.5 Grain-boundary migration and sliding	68
	2.4.6 Mobility of grain boundaries	71
	2.4.7 Static recrystallization	73
3	Phenomenological and thermodynamical analysis of quasi-steady-state creep	76
	3.1 Phenomenology	76
	3.1.1 Generalities	76
	3.1.2 Curvature of the Arrhenius plot	79
	3.1.3 Curvature of the creep-rate–stress plot	81
	3.1.4 The power-law equation	84
	3.2 Thermodynamics of creep	85
	3.2.1 The absolute reaction-rate theory	85
	3.2.2 The force–distance diagram	86
	3.2.3 Activation quantities	88
	3.2.4 Experimental determinations	91
4	Dislocation creep models	94
	4.1 Generalities	94
	4.2 Creep by thermally activated dislocation motion	97
	4.2.1 Localized obstacles	97
	4.2.2 Glide-controlled creep	101
	4.3 Power-law creep or recovery-controlled creep	103
	4.3.1 Bailey–Orowan equation	103
	4.3.2 Equivalence of the Bailey–Orowan and Orowan equations	108
	4.3.3 The Weertman model	109
	4.3.4 Power-law creep and self-diffusion	111
	4.3.5 Harper–Dorn creep	114
	4.4 Creep of solid-solution alloys	117
	4.4.1 Empirical classification	117
	4.4.2 Viscous glide creep models	122
	4.4.3 Discussion: stacking-fault energy and diffusion coefficient	123
	4.5 High-temperature deformation of ceramics and minerals	125
	4.5.1 Generalities	125
	4.5.2 Climb dissociation of dislocations	126
	4.5.3 Creep of olivine single crystals	136
	4.5.4 Dislocation creep processes in ice	138

Table of Contents

[More information](#)

<i>Contents</i>	xi
5 The effect of hydrostatic pressure on deformation	145
5.1 Generalities: high-pressure deformation and geodynamics	145
5.1.1 The structure and composition of the Earth	146
5.1.2 Convection in the viscous mantle	148
5.2 The physical basis of the effect of pressure on flow stress	151
5.2.1 Effect of pressure on dislocation creation	151
5.2.2 Effect of pressure on dislocation velocity	153
(i) Athermal flow processes	153
(ii) Flow controlled by overcoming of Peierls barriers	153
(iii) Cross-slip	155
5.2.3 Effect of pressure on hydrolytic weakening in quartz	157
5.3 Effect of pressure on recovery- and glide-controlled creep	158
5.3.1 Generalities	158
5.3.2 Correlations and models for the activation volume	162
(i) Correlation between ΔV and melting temperature	162
(ii) Elastic models	163
5.3.3 Application to the lower mantle	166
6 Creep polygonization and dynamic recrystallization	169
6.1 Generalities	169
6.2 Creep polygonization	170
6.2.1 Observation techniques	170
(i) Observation of the boundaries	170
(ii) Observation of the misorientation	171
6.2.2 Formation and evolution of the substructure	171
6.2.3 Subgrain size and creep-rate	177
6.3 Dynamic recrystallization	179
6.3.1 Recrystallization processes	179
(i) Rotation recrystallization	181
(ii) Migration recrystallization	182
6.3.2 Recrystallized grain size	185
6.3.3 Effect of dynamic recrystallization on mechanical properties	188
6.4 Geological palaeopiezometers	190
6.4.1 Dislocation density	191
6.4.2 Subgrain size	192
6.4.3 Recrystallized grain size	192
7 Diffusion creep, grain-boundary sliding and superplasticity	194
7.1 Generalities	194

xii	<i>Contents</i>	
	7.2 Diffusion creep	195
	7.2.1 Nabarro–Herring creep	195
	7.2.2 Coble creep	200
	7.2.3 Experimental observations	200
	7.3 Mutually accommodating grain-boundary sliding and diffusion creep	203
	7.4 Structural superplasticity	204
	7.4.1 Generalities	204
	7.4.2 Characteristics of the superplastic regime	205
	7.4.3 Microscopic models	208
	8 Transformation plasticity	213
	8.1 Introduction	213
	8.2 A short summary of thermodynamics and kinetics of phase transformations	215
	8.2.1 Equilibrium thermodynamics	215
	8.2.2 Kinetics	216
	8.3 Experimental evidence for transformation plasticity	222
	8.4 Macroscopic and microscopic models	223
	9 Scaling and classification	229
	9.1 Scaling	229
	9.2 Deformation maps	233
	<i>References</i>	236
	<i>Materials index</i>	256
	<i>Subject index</i>	258
