- Abelian transform, 4
 analytic, 110n, 242
 Ascoli–Arzela theorem, 154
- \mathcal{A}^m , 28, 484
 Baire’s category theorem, 59n
 Banach’s closed graph theorem, 69
 Banach–Steinhaus theorem, 65
 special case, 54
 Bessel’s inequality, 17
 Birman’s theorem, 450
 Bonnet’s theorem, 5
 boundary value problems, 457–65
 for elliptic equations, 195–9
 in the wider sense, 176–87
 of the third kind, 222–7, 234–7
 see also Dirichlet problems
 bounded set, 345
 bounded variation, 135
- Calderón’s theorem, 252
 category
 first, 59
 second, 59
 Cauchy data, 242
 positive, 247n
 Cauchy–Kowalewski theorem, 245–52
 Cauchy principal value (v.p.), 51
 Cauchy problems, 242–91
 local solubility, 256–61
 solubility, 252–6
 uniformly well posed, 288–9
 well posed, 259
 characteristic cone, 245
 characteristic direction, 245
 commutator, 313
 compact metric space, 59
 characteristic hypersurface, 245
 compensating function, 400–5
 conjugate operator, 195
 convolutions, 43
 of function, 30
 relationship with Fourier transforms, 117–23
- \mathcal{D} , 29, 484
 \mathcal{D}_K , 49
 \mathcal{D}^m , 29, 484
 $\mathcal{D}_{L^2}^m$, 29, 485
 $\mathcal{D}_{L^1}(\Omega)$, 485
 characterization of, 187–9
 structure, 80–96
 \mathcal{D}_{L^2} , 191–2
 $\mathcal{D}_{L^p}^m(\Omega)$, 77–80, 485
 dependence domain, 269–72, 361–6
 derivatives of a function, 72–3
 differentiability of a solution, 210–17
 near a boundary, 217–27
 differentiation term by term, 55
 Dirichlet’s condition, 148
 Dirichlet’s integrals, 4–12
 Dirichlet problems, 147–50, 231–4
 for elliptic equations, 150–72, 199–206
 for higher order elliptic operators, 240–2
 relation with Green’s operators, 154–5
 distributions, 47–146, 471
 convergence of sequence, 47–58, 84: in
 topology of \mathcal{D}' , 51–2
 derivatives of, 50
 extension of domain, 90
 Fourier transforms of, 96–107
 series of, 54
 support of, 89
 tempered, 98
- \mathcal{E} 89
 \mathcal{E}' structure, 80–96, 485
 $\mathcal{E}_{L^2}^m(\mathbb{R}_+^n)$, interpolation theorem in, 227–31
 $\mathcal{E}_{L^2}^m(\Omega)$, 189–90
 $\mathcal{E}_{L^p}^m(\Omega)$, 70–7, 485
 \mathcal{E}^m , 28, 485

- eigen-element, 160
- eigenfunction, 149, 166, 414, 462
completeness of, 465–70
- eigensolution, *see* eigen-element
- eigenvalue, 149, 160, 166, 414, 462–5
degree of, 463
- elementary solution, 142, 282
- elliptic equations, 147–242, 472–3
boundary value problem, 195–9
see also Cauchy problems, Dirichlet problems, elliptic operators, initial value problems
- ellipticity, uniform, 196, 240
- elliptic operators, 142, 212–13
Dirichlet problems, 199–206
elementary solutions, 142–6
high order, 240–2
strongly, 218
see also elliptic equations
- energy inequality for hyperbolic equations, 355–7
for symmetric hyperbolic system, 311–16
for system of hyperbolic equations, 348–55
remarks on, 316–20
- estimation
a priori, 390
of a product of functions, 377–83
of derivative of $E(x)$, 144–6
of iterated kernel 428–30
- evolution equations, 286–310, 475
see also Cauchy problems, initial value problems
- existence theorem of solutions, 272–6, 299–300
for evolution equation, 299
for hyperbolic equation, 366–8
for hyperbolic system, 357–61, 386–91
for parabolic equation, 305–6
for single equation, 392–5
for symmetric hyperbolic equations:
coefficients independent of t , 320–9;
general case, 329–36
