Restoration ecology
Restoration ecology

a synthetic approach to ecological research

edited by

I Introduction
1 Restoration ecology: ecological restoration as a technique for basic research W. R. Jordan III M. E. Gilpin, J. D. Aber 3
2 Restoration: an acid test for ecology A. D. Bradshaw 23
☐ Restoration is the ultimate test of ecological theory J. J. Ewel 31
3 The heuristic value of ecological restoration J. L. Harper 35
4 The self-effacing art: restoration as imitation of nature F. Turner 47

II Assembling whole systems in the field
5 The reclamation of derelict land and the ecology of ecosystems A. D. Bradshaw 53
6 Prairies V. M. Kline, E. A Howell 75
☐ Restoration practice raises questions J. Powers 85
7 Forests W. C. Ashby 89
8 Lakes E. B. Welch, G. D. Cooke 109

III Synthetic ecology
9 Marine microcosms W. H. Adey 133
10 Experimental community assembly: competition, community structure and the order of species introductions M. E. Gilpin 151

IV Partial or piecewise restoration in the field
11 Reintroduction as a method of studying bird behavior and ecology E. S. Morton 165
12 Mechanisms of colonization and species persistence in plant communities K. L. Gross 173
13 Restoration ecology: a tool to study population interactions? M. L. Rosenzweig 189

Contents

14 Mycorrhizae and succession R. M. Miller 205
15 Disturbed lands and ecological theory: an essay about a mutualistic association J. A. MacMahon 221

V Restored systems as opportunities for basic research 239
16 Restored forests and the identification of critical factors in species–site interactions J. D. Aber 241
□ The Hubbard Brook sandbox experiment F. H. Bormann, W. B. Bowden, R. S. Pierce, S. P. Hamburg, G. K. Voigt, R. C. Ingersoll, G. E. Likens 251
17 Community dynamics on an artificial prairie G. Cottam 257
18 Evolutionary lessons from degraded ecosystems T. McNeilly 271

VI Doing restoration ecology 287
19 Problems of scaling in restoration ecology: a practical application T. F. H. Allen, T. W. Hoekstra 289
20 Minimum viable populations: a restoration ecology perspective M. E. Gilpin 301
21 Disturbed ecosystems as opportunities for research in restoration ecology J. Cairns, Jr 307
22 Reflections on “mechanistic” experiments in ecological restoration P. Werner 321
23 Reflections on goals and on the relationship between theory and practice J. Diamond 329

This book represents the generous efforts of a number of people whose names are not represented in the table of contents.

To begin with, the symposium on which the book is based would not have taken place without the leadership and support of the University of Wisconsin–Madison Arboretum Director, Gregory Armstrong, who initiated planning for this program within weeks after assuming his post in 1983, and who has enthusiastically supported every aspect of the project, from planning the meeting to the editing of the resulting manuscripts.

Special thanks are also due to Chairman Gerald Gerloff, Donald Waller, and other members of the Research Subcommittee, which planned the meeting, the Arboretum Committee, which sponsored it, and to former Arboretum Naturalist James Zimmerman and Arboretum Rangers Keith Wendt and Brock Woods for valuable discussions of some of the ideas developed in this book.

We are grateful, too, to Arboretum Secretary Nancy Dopkins for typing, retyping and checking manuscripts, to Barbara Jordan for checking the final drafts and to Pam Holton for her skilful rendition of tables and graphs.

We also thank Peg Watrous for help in checking chapter references and members of the Friends of the Arboretum for assistance in planning and carrying out the symposium, and for help in proofreading.

Funding for the symposium was provided by the Knapp Fund, the University of Wisconsin Graduate School, a UW Anonymous Fund and the UW Arboretum.
