Excavation

Fieldwork in archaeology has been transformed over the past three decades. Drawing on a wealth of experience in excavating some of the most complex, deeply stratified sites in Britain, Steve Roskams describes the changes that have taken place in the theory and practice of excavation. He then provides a clear account of contemporary techniques, covering pre-excavation reconnaissance and site evaluation, the preparations for full excavation, the actual process of excavation, and the recording of photographic, spatial, stratigraphic and physical evidence. A final chapter discusses the future of excavation. This manual will be welcomed by the professional excavator, the academic researcher, students and the interested amateur.

STEVE ROSKAMS is Lecturer in Archaeology at the University of York.
CAMBRIDGE MANUALS IN ARCHAEOLOGY

Series editors

Don Brothwell, University of York
Graeme Barker, University of Leicester
Dena Dincauze, University of Massachusetts, Amherst
Priscilla Renouf, Memorial University of Newfoundland

Cambridge Manuals in Archaeology is a series of reference handbooks designed for an international audience of upper-level undergraduate and graduate students, and professional archaeologists and archaeological scientists in universities, museums, research laboratories and field units. Each book includes a survey of current archaeological practice alongside essential reference material on contemporary techniques and methodology.

Already published

EXCAVATION

Steve Roskams
This book is dedicated to the memory of my Mum.

My world is a much lesser place since her death, and no longer what it once seemed to be.

## Introduction  
1  
1.1 The role of dynamic individualism  
10  
1.2 Ideological factors  
15  
1.3 Technical factors  
19  
1.4 Organisational factors  
21  
1.5 The professionalisation of fieldwork and its implications  
23  

## Excavation in theory  
2  
2.1 A critique of total excavation  
31  
2.2 Problem orientation  
35  
2.3 The need for interdisciplinary research  
36  
2.4 Conclusions  
39  

## Pre-excavation strategies  
3  
3.1 Aerial photography  
43  
3.2 Field-walking/pedestrian survey  
46  
3.3 Shovel test pits/divoting  
48  
3.4 Documentary material  
50  
3.5 Previous excavations  
50  
3.6 Ground-based remote sensing  
51  
3.7 Chemical mapping  
54  
3.8 Coring and augering  
57  
3.9 Evaluation trenches  
58  
3.10 Conclusions  
60  

## Excavation in practice: background preparations  
4  
4.1 Finance and administration  
65  
4.2 Staff and support facilities

List of plates

17 A concrete mixer being used to separate soil from the more robust finds (York Archaeological Trust) 109
18 Articulated bones of small vertebrates found in association with a human burial (Don Brothwell) and cod vertebrae from a medieval midden (James Barrett) 121
19 A medieval hearth, cleaned to a very high standard (York Archaeological Trust) 123
20 The relationships between horizontal stratigraphy and structural divisions (York Archaeological Trust) 124–5
21 The bones of a foetus and mother from the medieval cemetery of St Nicholas Shambles, London (Museum of London) 127
22 Photographic recording taking place in a tunnel (Museum of London) 129
23 A medieval skeleton, with year code and skeleton number, direction of view, and coffin nail positions marked for future reference (York Archaeological Trust) 131
24 The use of an EDM to record the co-ordinates of individual finds (Heslerton Parish Project) 135
25 Section of stratigraphy showing below the sheet piling of an excavation (York Archaeological Trust) 145
26 Excavations at Winchester in the late 1960s (Winchester Excavations Committee) 162
27 Cleaning and recording a Roman wall in York (York Archaeological Trust) 191
28 Assembly marks on timbers from a medieval waterfront in London (Museum of London) 196
29 Detailed recording of the positions of the bones of a skeleton (York Archaeological Trust) 203
30 Two burials with a later intrusion cutting away their lower bodies (York Archaeological Trust) 205
31 Excavation of a ‘sandman’ at Sutton Hoo (Sutton Hoo Research Trust) 208
32 Spit excavation of a pit fill at West Heslerton, North Yorkshire (Heslerton Parish Project) 215
33 Wet sieving on site (Museum of London Archaeological Services) 224
34 Trowelling properly (Museum of London Archaeological Services) 228
35 An early example, from 1986, of recording context data directly onto computer in the field (Heslerton Parish Project) 276
36 A digital elevation model of the Yorkshire Wolds, with aerial photographic plots superimposed (Heslerton Parish Project) 280
FIGURES

1 Rescue versus research  
2 Roman roof tiles and *tesserae* plotted against features indicated by magnetic anomalies at Wharram Percy (University of York)  
3 Vegetation survey at the Sutton Hoo site, as part of pre-excavation evaluation (Sutton Hoo Research Trust)  
4 Mapping of phosphates at Birka, Sweden (Bjorn Ambrosiani)  
5 An excavation strategy adopted in the mid-1970s (redrawn by Frances Chaloner from Long 1974)  
6 Using 30m tapes to set out a series of 5m boxes along a baseline (Frances Chaloner)  
7 Defining a site grid and labelling Temporary Bench Marks before excavation (Frances Chaloner)  
8 A flow diagram for recording a single stratigraphic unit (James Brennan)  
9 Examples of plan types and planning methods (James Brennan)  
10 Creating a cumulative section (James Brennan)  
11 Positioning a section line for problem-solving (Frances Chaloner)  
12 A simple Harris matrix (James Brennan)  
13 Dealing with ‘jumps’ in a Harris matrix (James Brennan)  
14 Avoiding a common error in Harris matrix construction (James Brennan)  
15 Problems in labelling stratigraphy ahead of its excavation (Frances Chaloner)  
16 Using plan overlays to produce a Harris matrix (Frances Chaloner)  
17 A recording sheet for deposits and cut features (Frances Chaloner)  
18 A flow diagram for assessing deposit composition (Frances Chaloner)  
19 A recording sheet for masonry and brick features (Frances Chaloner)  

xii
List of figures

20 Stone courses and finishing (Frances Chaloner) 187
21 Common brick bonds (Frances Chaloner) 188
22 A timber recording sheet (Frances Chaloner) 194
23 Timber conversion methods and common carpentry joints (Museum of London) 195
24 A skeleton recording sheet (Frances Chaloner) 202
25 Problems with the stratigraphic position of cut features (Frances Chaloner) 211
26 Stratigraphic definition in trowelling (Frances Chaloner) 231
27 A simple stratigraphic sequence for analysis (Frances Chaloner) 248
28 A Harris matrix amended to show different types of record and blending of strata (Frances Chaloner) 256
29 A Harris matrix amended to show different interpretative types of strata and strengths of linkage (Frances Chaloner) 263
30 A Harris matrix ‘stretched’ to show relative time in diagrammatic form (Frances Chaloner) 264
31 A Harris matrix adjusted to indicate absolute time, with phasing decisions imposed on the sequence (Frances Chaloner) 265
ACKNOWLEDGEMENTS

The thoughts and ideas expressed here have been influenced, inevitably, by many other people. These include the first supervisors I worked for who had to put up with endless queries such as ‘But why do sections have to be vertical?’ and ‘Why take the photograph now rather than after the next occupation layer has been removed?’ (I never got a straight answer to these, or most other, questions.) Later there were fellow excavators in full-time units with whom I discussed improvements in excavation techniques during site tea-breaks, that time long acknowledged as the most productive part of the working day. Recently there have been the students at York who have had to sit through seminar discussions on anything from site safety to questions such as ‘What is a phase?’, or even more philosophical issues such as ‘What are data?’ I have borrowed ideas from them all, knowingly or otherwise.

There are several individuals who deserve more specific mention. A long time ago, in Cirencester, Richard Reece showed me that excavations could be not only physically enjoyable but intellectually demanding, and further that it was not necessary to act as Adolf Hitler in order to supervise them effectively. Henry Hurst, during our work at Carthage, let me into the secret that post-excavation analysis was not just a necessary evil which made you pull your hair out (though it certainly does this) but also a creative activity in its own right. Later, in London, Annie Upson and Friederike Hammer opened up my eyes to new aspects of site recording, especially its graphic representation. More recently, Phillip Rahtz and Martin Carver of this Department have set me straight on different conceptions of the archaeological record and tolerated my argumentative interventions into their seminars, whilst Mark Whyman has discussed various issues with me and so demonstrated on many occasions that research students give much more to their academic ‘supervisors’ than they receive. Finally, Martin Jones and Tracy Wellman in Algeria showed me that collaboration in a team really was the best way to work and to learn in archaeology (and in many other areas besides). If I take full responsibility for the biased views, incoherences and mistakes in this manual, it is all the excavators who have worked with me who are to blame for stimulating me into writing it.

Finally I would like to thank Jessica Kuper of Cambridge University Press for her encouragement during the long time this book has been in preparation and thus allowing it to see the light of day.
