

CONTENTS

<i>Preface</i>	xi
1 Introduction	1
1.1 Function of proteins and nucleic acids	1
1.2 Structure and dynamics	2
1.3 Scope of this book	4
2 Structure of proteins, nucleic acids, and their solvent surroundings	6
2.1 Water and aqueous solutions	7
2.2 Protein structure	11
2.3 Nucleic acid structure	16
2.4 Molecular associations	22
3 Dynamics of proteins, nucleic acids, and their solvent surroundings	25
3.1 Water and aqueous solutions	25
3.2 Protein dynamics	28
3.3 Nucleic acid dynamics	31
3.4 Molecular association dynamics	33
4 Theoretical methods	35
4.1 Survey of approaches	35
4.2 Model functions for potential energy or potential of mean force	39
4.3 Relationship between energy minimization and molecular dynamics	44
4.4 Energy minimization	47
	vii

viii	<i>Contents</i>	
	4.5	Adiabatic mapping 54
	4.6	Normal mode analysis 57
	4.7	Molecular dynamics 60
	4.8	Free energy calculations 66
	4.9	Activated molecular dynamics 73
	4.10	Brownian dynamics 75
5	Short time dynamics	79
	5.1	Introduction 79
	5.2	Results for proteins 80
	5.2.1	Local aspects 80
	5.2.2	Collective aspects 87
	5.2.3	Dynamic models 91
	5.2.4	Experimental connections 96
	5.3	Results for nucleic acids 105
	5.3.1	Motions of individual atoms 106
	5.3.2	Hydrogen bond dynamics 110
	5.3.3	Dynamics of backbone torsional angles 111
	5.3.4	Dynamics of double helical regions 112
	5.4	Nature of short time dynamics 115
6	Local structural transitions	117
	6.1	Introduction 117
	6.2	Results for proteins 118
	6.3	Results for nucleic acids 124
	6.4	Nature of local structural transitions 131
7	Global structural changes	137
	7.1	Introduction 137
	7.2	Results for proteins 139
	7.3	Results for nucleic acids 145
	7.3.1	Large scale motions in DNA 145
	7.3.2	Large scale motions in tRNA 147
	7.4	Nature of global structural changes 149
8	Dynamics of molecular associations	151
	8.1	Introduction 151
	8.2	Superoxide dismutase 152
	8.3	Nature of molecular association 154

<i>Contents</i>	ix
9 Recent developments and future directions	157
9.1 Introduction	157
9.2 Computing methods	158
9.2.1 Improvements in computer hardware	158
9.2.2 Advances in methodology	160
9.3 Biomolecular structure	161
9.4 Biomolecular function	165
9.4.1 Ligand binding	165
9.4.2 Enzyme activity	167
9.4.3 Macromolecular association	168
9.5 Outstanding problems	170
Appendix 1 Numerical integration of the equations of motion	173
Appendix 2 Detailed description of computer programs and procedures for energy minimization and molecular dynamics	181
Appendix 3 Molecular dynamics at constant temperature and pressure	188
