978-0-521-36919-0 - Number Theory and Dynamical Systems

Edited by M. M. Dodson and J. A. G. Vickers

Table of Contents

[More information](#)

## Table of Contents

<b>Introduction</b>	1
<b>Chapter 1</b>	5
Non-degeneracy in the perturbation theory of integrable dynamical systems	
<i>Helmut Rüssmann</i>	
<b>Chapter 2</b>	19
Infinite dimensional inverse function theorems and small divisors	
<i>J.A.G. Vickers</i>	
<b>Chapter 3</b>	37
Metric Diophantine approximation of quadratic forms	
<i>S.J. Patterson</i>	
<b>Chapter 4</b>	49
Symbolic dynamics and Diophantine equations	
<i>Caroline Series</i>	
<b>Chapter 5</b>	69
On badly approximable numbers, Schmidt games and bounded orbits of flows	
<i>S. G. Dani</i>	
<b>Chapter 6</b>	87
Estimates for Fourier coefficients of cusp forms	
<i>S. Raghavan and R. Weissauer</i>	
<b>Chapter 7</b>	103
The integral geometry of fractals	
<i>K. J. Falconer</i>	
<b>Chapter 8</b>	117
Geometry of algebraic continued fractals	
<i>J. Harrison</i>	
<b>Chapter 9</b>	137
Chaos implies confusion	
<i>Michel Mendes France</i>	
<b>Chapter 10</b>	153
The Riemann hypothesis and the Hamiltonian of a quantum mechanical system	
<i>J. V. Armitage</i>
