core situation and, 73–4, 83
CPNE and, 95–6
definition of, 36
e-CSSB and, 40, 42
e-OSSB and, 40–1
externally stable, 36
F-stability and, 173, 176
in individual commitments situation, 107–
8, 117
in individual contingent threats situation,
99, 101–2, 114
  internally stable, 36
OSSB and, 38, 39, 41–2
in tree situation, 135–6, 145
unique, 79, 86
abstract system
associated with situation, 38
in coalition-proof Nash situation, 96
in coalitional commitments situation, 111
in coalitional contingent threats situation,
104
definition of, 36, 38
friendship mapping of, 173, 176
in individual contingent threats situation,
99
preferences and, 174
with strictly acyclic dominance relation,
39
in tree situation, 135–6, 145
acyclic digraph, 45
rooted tree as, 119
acyclic dominance relation, definition of,
38–9

Alesina, A., 88
Asheim, G., 24, 40, 88, 109, 135
associated abstract system
definition of, 38
see also abstract system
associated digraph, 46
atomless exchange economy, 68
auction game with budget constraint, 134–5
Aumann, R., 68, 71, 81, 96, 166

bargaining
  generalized sequential, 129–30, 136, 142
  sequential, 167–9
bargaining set
  consistent, 172
  modified, 77, 84–5
  stable, 77–8, 84–5
Beja, A., 63
Berge, C., 45
Bernheim, D., 87, 88, 91, 92, 95, 96
bounded acyclic digraph, 45, 46, 57
bounded cooperative game, 75, 84
bounded game tree, 123–6, 137–9
bounded payoff function, 94
bounded rationality, 167–9, 175

CDOM (conservative dominion), 19–20,
25–6, 148
CDOM* (conservative dominion*), 24
characteristic function, definition of, 63
characteristic function form games, 62–85
abstract stable sets and, 70–4, 82–3
binding commitment in, 69
bounded, 75, 84
coalition formation and, 62–3, 68–9
core situation and, 64–70, 73–4, 83
counter objection in, 77
definition of, 63–4
e-Core and, 75, 84
finite (n-person), 64, 66, 73–4, 78, 83,
84–5
infinite, 67–8
market games as, 68–9, 81
modified bargaining set for, 77, 84–6
monotonic relative to N, 73–4, 83

  subgame perfect equilibrium, 119, 130, 132–4, 169
  tender threats, 4, 62, 70–1
  tree situation, 122–4, 139–40
  advantages of, 119–22
  coalitional, 136–9
  vs. coalitional tree situation, 138–9
  CSSB in, 119, 124, 125–30, 140–2
  game tree associated with, 123–4
  infinite, 126–8
  OSSB for, 119, 124, 130–6, 139, 144–5
  paths in, see path
  subtrees in, 122–5, 128–9
  see also game tree
  “‘trembling hand’” refinement, 132n
  truncation of path, 124
  Tychonoff’s theorem, 148

  unified solution concept, 5

vN&M, see under von Neumann, J., and Morgenstern, O.
von Neumann, J., and Morgenstern, O., 5, 16, 17, 36, 38, 39, 41, 71
abstract stable set of, see abstract stable set
situation of, 70–3, 82–3
solution of, 71–4

voting, 32–5
  as hierarchical situation, 44–5
  retrospective, 132
  split ticket, 88
