Subject index

Acquisition, motor, 42; second language, 7; traditional, 9, 23, 35–36, 37 (see also Children, Conditioning, Imitation, Infants, Language acquisition, Neonates, Reinforcement)
Affiliation, 8, 13, 38, 44, 53–54
Affirmation, 7, 44
Age, see Children, Elderly, Infants, Neonates
Aggression: as a behavioral category, 37–38; and behavioral sequences, 44; and displacement activities, 40 (see also Anger)
Agreement/Disagreement, 53, 54 (see also Listener responses)
American Sign Language (ASL), see Sign language
Analytic/holistic processes, 145
Anger, 34, 51–52 (see also Aggression)
Animal communication: and design features, 23; and ethology, 28–47; and language, 1–2; and zoosemiotics, 20
Anxiety, 41, 53–54, 63, 79, 153
 Aphasia, see Brain damage
Arousal: control of, 39, 41–42; versus deception, 68; emotional, 51–52; in infants, 30, 104, 117, 154
Attachment, 38, 39, 104
Attention, visual, 43; development of joint, 126–127, 128, 155; and status 9, 45 (see also Gaze, Pointing)
Attentional control, 77, 86, 97; and deception, 68; and self-touching, 42, 72; and speech production, 17; and stimulus selection, 42 (see also Automaticity, Resources)
Attentiveness: and illustrative gestures, 102; and listener responses, 19
Attribution, 4, 52, 55–56, 59–60, 64, 117, 124 (see also Impression formation, Impression management)
Autism, 42, 154–155
Automaticity, 28–29, 47, 78, 97, 148
Back-channel responses, 18–19 (see also Listener responses)
Batonic gesture, see Beats
Beats: in aphasia, 141; in classification of gestures, 11–12, 89, 99; development of, 130–131; functions of, 24, 74; and intonation, 72, 73, 76; and turn taking, 18 (see also Intonation)
Bilinguals, 79, 133, 153
Birdsong, 35
Blindness, 65, 131
Body orientation, and affiliation, 13–14, 58
Bonding gesture, see Affiliation
Boredom, 53
Brain damage, 27, 136–152; and analytic/holistic processing, 145; and auditory comprehension, 151; and motor control, 142–144; and naming, 148, 149, 150; and nonverbal communication, 136, 140; and sign language, 146; and symbolic functioning, 140–141
Breast feeding, 119
Categories, behavioral, see Classification of gestures
Cerebral asymmetry, see Brain damage. Lateral differences
Channel, 23, 49 (see also Modality specificity)
Children: behavioral repertoires of, 37; and deception, 68; and development of gestures, 130–135; and discrepant mes-
Subject index

sages, 67; and illustrative gestures, 79, 80, 82; and status, 45; and video primacy, 61
Classification of gestures, 60, 89, 99; functional, 37–39; semiotic, 11–12
Cognitive development, and gesture production, 132, 135 (see also Language acquisition)
Coherence, 14
Competition, 39–41, 77–78, 83 (see also Dual-task paradigm, Interference, Resources)
Complexity hypothesis, 114, 138–139 (see also Attentional control, Resources)
Comprehension of gestures: in aphasia, 136–137, 138, 145; in children, 115, 127; and context, 25, 47; in discrepant messages, 66; and displays of emotion, 50, 59, 145; and emblems, 7, 133; with or without speech, 99–100 (see also Impression formation, Transparency of signs)
Comprehension of speech: and facial signals, 17; gestural facilitation, 88, 93, 96–98, 113, 127–129, 151–152; gestural signs of, 19; and inferences, 88, 91; and intonation, 94; and modality of presentation, 64; and semantic priming, 101 (see also Lipreading)
Computer, dialogue with, 88
Conditioning, 29, 30–32, 117
Connotative meaning, 6, 55, 63 (see also Arousal, Evaluation, Status)
Context: of apes’ signing, 32; of early verbalizations, 107, 111, 126; and ethological analysis, 39, 43; irrelevance in, 40–41 (see also Displacement activities); and language comprehension, 101, 126–129, 151; and meaning of nonverbal signals, 57–58, 99; and pragmatics, 24–25; of vocal signals in animals, 28 (see also Comprehension of speech)
Control theory, 39–40 (see also Attentional control, Motor control)
Convention, and sign meaning, 10–11, 22, 30, 60, 110
Conversation, 14–20, 79–82, 143; during infancy, 117–125 (see also Greeting)
Counting, 10, 132
Courtship, 14, 33–35, 40, 45
Cross-cultural differences, 6–9, 35, 98 (see also Universals)
Deafness: and language acquisition, 114–115; and lateral differences, 146; and referential communication, 133 (see also Sign language)
Deception: in animals 30, 47; as design feature of language, 23; nonverbal signs of, 67–69
Decoding, see Comprehension of gestures, Comprehension of speech
Deixis, see Pointing
Dementia, senile, 152
Depression, 41, 153–154
Design features of natural language, 22–23
Differences, see Cross-cultural differences, Gender differences, Individual differences, Lateral differences
Discrepancy between verbal and nonverbal signals, 66–67
Displacement activities, 34, 40–43
Dominance, see Status
Down’s syndrome, 154–155
Dual-task paradigm, 72, 77 (see also Interference)
Elderly: age estimation from gait, 56; pantomime in, 140
Embarrassment, 44, 52
Emblems, 11–12, 99; and brain damage, 140; and communication of emotion, 51; in cross-cultural communication, 7; development of, 133; distinctive features of, 22; see also Symbols
Emotion, 1–2; Darwin on, 33–35; nonverbal communication of, 49–53, 63, 145; postural feedback on, 59; and self-touching, 41; and video primacy, 62–64 (see also Anxiety, Depression, Embarrassment, Facial expression, Fear, Vocal expression)
Emphasis in speech, 85, 94–95, 97
Equilibrium theory, 13, 17, 58 (see also Affiliation, Reciprocity)
Evaluation, 6, 54–55, 60, 63, 67
Evolution, see Phylogeny
Expectancy, and experimenter bias, 50
Eye contact, see Gaze
Eyebrow raising, 8, 34, 44, 94
Facial expression, 5; in mother–infant interaction, 30, 106–107; and play, 30; visual attention to, 17; universality of, 8
Fear, 29
208 Subject index

Fluency, 78–80, 93, 141, 146 (see also Hesitation pause, Repairs)
Folded arm posture, 6, 42, 54
Foreign language, 7 (see also Bilinguals)
Friendship, see Affiliation
Functional analysis: in ethology, 37–46, 104; and nonverbal communication, 40, 49; and pragmatics, 24–25; and social control, 14 (see also Conversation, Pragmatics)
Gait, 52, 55–56
Gaze, 5; and affiliation, 13, 58, 153–154; and cognitive development, 105–106, 122; and deception, 68–69; and greeting, 14, 15; infant perception of, 126; as listener response, 19; in mother–infant interactions, 121; and pointing gestures, 110, 123; and request, 31; and status, 57; and turn taking, 16–18 (see also Attention)
Gender differences, 46, 55–56, 61
Gene distribution, 33–36
Grammar, see Syntax
Greeting, 15, 25, 31, 34, 40, 46
Grooming: as displacement activity, 40; and greeting, 15 (see also Self-touching); social grooming, 30, 46
Hand configuration, 22, 93, 101
Handedness, 144, 147 (see also Lateral differences, Motor control)
Head movement: and depression, 153–154; functional analysis of, 43–44; and greeting, 15; as listener response, 19, 53; during speaking, 81 (see also Affirmation, Negation)
Hesitation pause, 16, 19, 80–83 (see also Fluency)
Iconicity, see Illustrative gesture
Illustrative gesture: in aphasia, 141–142; and classification of gestures, 11–12, 89, 99; cross-cultural differences in, 8; development of, 131; and emotion, 52; lateral differences in, 139, 143; and persuasion 53; and referential activity, 72–75, 98; and self-touching, 42; while speaking to children, 128; and speech content, 79–80; and turn taking, 18; and verbal memory, 102
Imagery: motor, see Schema; visual, 17, 80 (see also Visuo-spatial representation)
Imitation: and affiliation, 44; and brain damage, 140, 142; and cultural evolution, 36; in infancy, 111–114, 119; and language acquisition, 32; in mother–infant interactions, 117, 119, 155; and status, 45 (see also Acquisition, Posture mirroring)
Impression formation, 50, 54–56, 57, 59, 63, 65, 96
Impression management, 13, 68–69
Individual differences: in bodily expression, 4, 55–56; in gesture production, 73, 79; and motivation, 38–39; and social skills, 60
Infants, 1, 42; and handedness, 144; and preverbal interactions, 116–125; and symbolic development, 105–116 (see also Mother–infant interaction, Neolates)
Information-processing models, 84, 88, 103, 137, 146, 147
Intention movement, 15, 18, 20, 34, 42
Interaction, social, 13–15, 44–46, 58, 154 (see also Mother–infant interaction, Synchrony)
Interference, 17, 78, 84, 86; in Stroop task, 72 (see also Dual task paradigm)
Interobserver agreement, 12, 129
Interview, see Conversation
Intonation, 21, 154; and emotional expression, 28; and emphasis, 94; and gesture production, 12, 72, 76, 81, 85, 154; and turn taking, 18 (see also Emphasis in speech, Vocal expression)
Kinesics, 2, 20–22, 76, 81
Language acquisition, 23, 104–135; in ASL, 114–115; influence of gestural cues in, 127–129; and maternal input, 125–129; and preverbal interactions, 116–125; and symbolic development, 105–116
Language origins, gestural theory of, 28–29 (see also Phylogeny)
Lateral differences, 7, 10, 30, 78, 118, 139, 143–144, 145, 146, 147
Leaning, backward or forward, 19, 53
Leaving, 15, 20
Leg/foot movement, 15, 42, 53–55, 80, 82, 116
Lie, see Deception
Liking/disliking, see Evaluation
Lipreading, 17, 92–93, 97
Subject index

Listener responses, 15–20
Localization, cerebral, 136–137
Markov chain, 16, 47
Memory tasks, 72, 79, 85–86, 93, 101
Mental representation, 2, 30, 47, 71–75, 90–91, 108–109, 132, 148 (see also Attribution, Imagery, Schema, Visual-spatial representation)
Methods in gesture recording, 12, 20–22, 25, 37–38, 81, 118–119, 120–121
Modality specificity, 2, 28, 62–64, 76, 90, 103, 105, 108–113, 148
Mother–infant interaction, 30, 110, 116–129
Motivation, 37–43, 118, 155; attribution of, 50
Motor control, 3–4, 76, 78, 84, 142–144, 146
Naming, 31, 109, 123, 147, 148, 149, 150
Narrative, 74, 80, 88, 131
Negation, 7, 44, 134–135
Neonates, 117–118, 119, 120, 144; and imitation, 112
Noise, 75, 97
Object manipulation, 29, 108, 113, 123, 140, 144 (see also Acquisition, Children, Infants)
Ontogeny, 35, 71, 74 (see also Acquisition, Children, Infants)
Open/closed posture, 6, 54
Organization: behavioral, 14, 29, 37, 75; of discourse, 74–75, 81, 88
Pantomime, 11, 131, 133–134; comprehension and brain damage, 136–137, 140–141, 149, 152; production and brain damage, 139, 140–141, 148, 150, 152
Paralinguistics, see Intonation, Pathology, see Autism, Blindness, Brain damage, Deafness, Dementia, Depression, Down’s syndrome, Schizophrenia
Pedestrian, 13
Person perception, see Impression formation
Personality, 55–56, 58, 79; disorders of, 79
Persuasion, 53, 59, 64 (see also Rhetoric)
Phonology, 20–22, 29, 92–93, 147, 149, 151
Phylogeney, 2, 23, 27–36, 37, 104
Physiognomy, 4, 56
Play, 30, 38, 118–119, 154
Pointing: in ASL acquisition, 114; in autism, 155; in classification of gestures, 11–12; comprehension of, 91, 127; development of, 108, 109–110, 123–125, 130, 133; and development of spoken language comprehension, 127, 128; functional analysis of, 25, 38, 127; lateral differences in during infancy, 144; in primates, 31–32; and speech comprehension, 88, 93; and synchrony with speech, 83–84
Politicians, 63, 85
Posture, 6, 51–56, 59 (see also Body orientation, Folded arm posture, Leaning, Posture mirroring)
Posture mirroring, 13, 15, 53–54
Pragmatics, 24–25, 30–31, 88, 91, 116–125, 142 (see also Skills, Speech acts)
Primate, 28–32, 37, 45, 46
Problem solving, 41, 59, 72, 143
Profile of Nonverbal sensitivity (PONS), 60, 62, 67
Prosidy, see Intonation
Psychopathology, see Autism, Depression, Personality: disorders of, Schizophrenia
Psychotherapy: Freud’s influence on, 50; nonverbal interactions in, 154; perception of the counselor in, 54–55, 57; use of bodily expression in, 4
Racial prejudice, 57 (see also Cross-cultural differences)
Reaching movement, 31, 123–124
Reciprocity, 58, 119–121
Referential communication, 29, 91, 123–125, 133, 141–142 (see also Pointing)
Reinforcement, by listener responses, 19, 66 (see also Conditioning)
Repairs, 19
Repetoire 12, 21, 24, 28–29, 37, 109, 117
Request, 30–31, 124, 155
Resources, 77, 84 (see also Attentional control, Complexity hypothesis)
Response time, 72, 83–84, 92, 94, 101
Restriction of movement, 73–74
Retardation, mental, 114 (see also Down’s syndrome)
Rhetoric, 1 (see also Emphasis in speech, Persuasion)
Rituals, 10, 13–14, 42, 47, 109, 111
Rules, see Syntax
210 Subject index

Schizophrenia, 73, 153
Scratching, 34
Self-touching; and attention, 72; and classification of gestures, 12; and deception, 68; and depression, 41, 52, 153; as displacement activity, 40–42; and emotion, 52; gender differences in, 55; and impression formation, 55; and lateral differences, 139, 143; and leaving, 15; and personality, 4, 56; in primates, 37; and reticence, 53; and schizophrenia, 73, 153; and speech production, 79, 82; and turn taking, 18
Sequences, behavioral, 13–15, 38, 44–45, 118–119, 121, 142 (see also Markov chain)
Sex, see Gender differences
Shoulder shrugging, 34
Sign language: acquisition of, 114–115; and brain damage, 146; formation of signs in, 22; and language origins, 29; and lateral differences, 145, 146; in primates, 31–32; symbolic meaning in, 10–11, 100
Single case design, 137–138
Skills, social, 30, 50, 60–61, 104, 133, 155
Smile, 15, 19, 38, 39, 53, 68, 106
Sociometrics, 46
Speech acts, 1, 24, 31, 122–125
Status, hierarchical, 6, 9, 45–46, 54–55, 57, 60, 67
Stereotypy, 42, 47, 153
Stress, see Emphasis in speech
Stuttering, 81, 82
Symbols: bodily, 4; and brain damage, 140–141; gestural, 9–12, 132; use by infants, 105–116; use in primates, 31–32 (see also Conventions, Emblems
Synchrony: between gestures and speech, see Timing; interactional, see Posture mirroring (see also Mother–infant interaction)
Syntax, 11–20, 22, 29, 32, 33, 48, 105, 113, 115 (see also Markov chain, Sequences)
Telephone, 18–19, 65–66 (see also Visibility)
Timing, 8, 18, 74, 78–85, 101, 102, 117–118, 120, 131 (see also Response time)
Tongue-showing display, 7, 44, 112, 117
Tool use, 3, 27
Touching gesture, 8, 15, 46
Transparency of signs, 10–11, 99
Turn taking, 15–19, 32, 65, 75, 118–119, 122
Universals, 1, 8, 22–23, 34–35, 44, 119
Video primacy effect, 62–64, 66–67
Visibility, 64–66, 73, 96–97 (see also Telephone)
Visuo-spatial representation, 8, 75, 80, 86, 98, 132, 139, 143
Vocal expression, 28–29, 39, 62–69, 109–113, 119 (see also Emphasis in speech, Intonation)
Waving, 15, 109 (see also Greeting)
Weight shifting, 20 (see also Leaving)
